INTRODUCTION

THIS PAGE IS INTENTIONALLY BLANK

STRATEGIC VISION

The City of Sunnyvale has developed a strategic vision to build and maintain its capital assets so residents will continue to realize optimal service delivery in an aesthetically pleasing environment. Careful management of these assets keeps the City poised for flexible and responsive growth, while methodical planning allows the City to proactively respond to evolving community needs and expectations. Furthermore, this plan incorporates a broad vision that enables the City to concentrate on the “here and now” delivery of service, while keeping its eye on the horizon. Applying a long-term approach allows the City to seek the most financially feasible opportunities to “grow” towards a vision of tomorrow.

The City’s [General Plan](#) serves as the City’s long-term blueprint for the community’s vision of future growth, and proposed capital improvements must support the General Plan. By definition, a capital improvement requires a major initial investment, a significant and continuing financial commitment for maintenance, and eventual replacement. Capital improvements require careful long-term planning and budgeting so economic downturns or financial emergencies do not result in deferred maintenance and deteriorating assets.

The City carefully considers each project’s short-term and long-term effects against the General Plan, current policy directives, citywide needs, ongoing operational needs, and budgetary constraints. These considerations are applied across the entire twenty-year planning horizon to all projects, no matter the cost or scope. The City’s disciplined planning results in a long-term, comprehensive project plan that provides a “big picture” perspective of how projects are synchronized with a balanced operating budget. This approach offers a complete financial analysis of the impact of all projects proposed for funding in the immediate and future years.

Fiscal Policies Related to Capital and Infrastructure Expenditures

City Council Fiscal Policy identifies capital improvements and related policies designed to maximize the value and cost-effectiveness of the City’s infrastructure. Several key policies include those relating to planning, design, and funding.

Capital Improvement Plan. High priority should be given to replacing capital improvements before they have deteriorated to the point where they are hazardous, incur high maintenance costs, negatively affect property values, or no longer serve their intended purposes. Priority is given to the repair and replacement of existing infrastructure as compared to the provision of new or expanded facilities.

Capital Improvement Design. All capital improvements are planned and designed based on standards that minimize construction costs while ensuring acceptable useful life and reducing maintenance requirements. Value engineering processes will be used when necessary and appropriate.

Capital Improvement Funding. In most cases, governmental capital improvements should be funded on a pay-as-you-go basis. Alternate financing strategies may be considered under certain circumstances, depending on an overall funding approach that balances the capital needs of today, while planning for those anticipated in the future.

Land Acquisition. Acquiring undeveloped land is a high priority to meet the City's goals. Land should be acquired at a reasonable time before the property is required for City purposes.

Reserves. The City strives to maintain a prudent level of reserves for future unexpected expenses and decreases in revenue; to accumulate funds to support future planned capital improvements; and to reduce the variability between high and low expenditure years in the Twenty-Year Resource Allocation Plan. Each utility fund has a Capital and Infrastructure Reserve to provide resources for the infrastructure replacement needs of the respective utility system.

Project Planning and Budgeting

Every other year, the City performs an in-depth review of the twenty-year Projects Budget and every project is updated. All project costs are updated to reflect current expenditure requirements, anticipated revenue, and ongoing operating savings or expenses. The primary focus of these baseline adjustments is to ensure that the City can meet its existing commitments and has a realistic project delivery plan.

The Service Level Adjustment phase is an opportunity to consider enhancing service levels or proposing new initiatives. Projects with significant changes in scope or new project submissions may be proposed. These submissions are reviewed in terms of the potential to further the City's General Plan goals or Council's priorities, fiscal impact, and stated performance goals. It should be noted that service level adjustments can reduce service levels, especially during economic uncertainty.

The City applies a broad prioritization framework for evaluating project funding requests in a targeted way given the City's limited resources. Some initiatives meet more than one priority level, or the priority level may shift over time. For example, a project could be necessary to meet regulatory requirements that are legally mandated and have other objectives. Project funding requests are assessed accordingly with appropriations scaled where appropriate and practicable.

A high-level synopsis of the City's project funding prioritization levels is outlined below:

- Highest – protection of public health and safety and adherence to legal requirements
- High – rehabilitation/replacement of assets that have deteriorated or have high maintenance costs; Council priority or result of a Study Issue; project identified explicitly in the General Plan or other Council-adopted plan
- Mid-range – required to meet existing service levels or for future cost avoidance

Each project is then reviewed in several contexts before being selected for funding. Staff perform complete cost/benefit analyses to answer questions, such as:

What precipitated the project proposal? What accomplishments or milestones will be achieved? What is the risk or impact to service levels if the project is not funded?

What alternatives were considered? Were environmental and equity impacts considered? What other relevant community, market, or industry information supports project implementation?

What is the overall fiscal impact of implementing the project? How will the project be funded? Is there offsetting revenue or external grant funding available? Are there ongoing operating expenditures or savings? What is the return on investment? Is an initial capital outlay or debt issuance required? Will there be infrastructure replacement costs?

How will the project be administered? Has staff capacity been confirmed within existing workloads? Have interdependencies across departments (e.g., ITD, DPW) or other organizations been coordinated? Are there other City initiatives or regional activities that should be considered to align the timing of project implementation?

With these questions answered, decision makers can evaluate a proposal's complete merits and understand the impact of policy decisions. Additionally, this methodology incorporates short- and long-term perspectives for planning revenues, operating requirements, and capital spending.

Projects Budget Organization

The Projects Budget is divided into fifteen sections by major service area or initiative: Traffic and Transportation, Downtown, Housing, Water, Solid Waste, Wastewater, Cleanwater, Stormwater, Public Safety, Community Development Block Grant, Outside Group Funding, Parks and Recreation, Library, Governance & Community Engagement, and Administrative Facilities.

Individual projects are categorized as capital, infrastructure, special, or outside group funding.

- Capital projects – relate to new construction, improvements that significantly enhance an asset, or the acquisition of a new asset.
- Infrastructure projects – relate to the long-term renovation and replacement of the City's existing physical assets like streets, water and wastewater systems, roof replacements, etc.
- Special projects – are typically one-time projects designed to address a specific community need or problem such as grant projects or study issues.
- Outside group funding – These are also special projects, but identify City contributions to local community-based organizations.

Every project has a Project Information Sheet that includes the project number/name, project description, evaluation, and fiscal impact. Each project is also tied to the relevant General Plan goals. Project costs, revenues, and operating savings/costs are planned across the twenty-year planning period. Additional information includes the department responsible for project administration and the scheduled completion year.

Unfunded Projects

The City makes a concerted effort to identify all the critical unfunded capital needs that pose a significant liability over the long term. Unfunded projects fall into several categories, with many having partial funding identified or potential funding sources that

can be pursued. Including these unfunded projects in the budget document keeps these items on the radar for review during budget development each year as a priority for potential funding. This provides for a focused approach to the City's investment in capital. A broad list of known areas that are unfunded or underfunded can be found in the Budget Summary Highlights in Vol. I.

In addition, many unfunded projects are identified in the long-range plans for traffic and transportation that guide the City's investment in this area. These long-range plans are discussed in more detail under the Traffic and Transportation projects category. The complete listing of projects for this plan is also provided. Those projects on the list that are not included in the projects budget will be evaluated and moved into the projects budget when funding becomes available and the project can be delivered.

Project Information Sheets for unfunded projects can be found in numerical order in each project category following the Project Information Sheets for funded projects.

Significant Changes

The tables below represent new projects proposed in FY 2025/26 or projects with significant scope changes. Significant changes to scope include projects with added or deleted scope (e.g., asset determined to need replacement vs. repair or vice versa). This table does not include bringing project budgets current to meet existing service levels, standard inflation adjustments, or schedule adjustments across the twenty-year planning period.

FY 2025/26 Projects with Scope Change (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
801351 - SMART Station Equipment Replacement, Sunnyvale Portion	Solid Waste	Environmental Services	Increases annual contributions from \$409,000 to \$525,000 in years 3 to 20 to normalize funding and avoid extreme annual fluctuations over the 20-year period.	\$ 69,201	\$ 164,241
818100 - Public Safety Buildings - Roofs	Infrastructure	Public Works	Moves project funding to the individual Fire Station remodel project cancellation and move money to individual fire station renovation project	-	\$ (1,755,000)
820130 - Routine Resurfacing of City Owned Parking Lots	Gas Tax	Public Works	Adds funding for large digouts, crack sealing, slurry sealing, and restriping of parking areas.	-	\$ 295,000
820200 - Traffic Signal Light Emitting Diode (LED) Array Replacements	Gas Tax	Public Works	Aligns funding with updated construction cycle for Pedestrian LEDs and Vehicle LEDs.	-	\$ (1,397,700)
820240 - Park Tennis/Basketball Court at Sunnyvale facilities.	Park Dedication	Public Works	Adds funding to re-strip Pickleball courts at Sunnyvale facilities. Due to high use and growing popularity, court lines are deteriorating faster than expected.	\$ 200,000	\$ 200,000
824571 - Project Management for Town Center Development Agreement	Redevelopment Agency	Office of the City Attorney	Adds funding to cover the current shortfall and costs associated with transferring the garages.	\$ 225,139	\$ 225,139
825251 - Mary/Carson Water Plant Upgrade	Water Supply & Distribution	Environmental Services	Adds funding to cover a significant construction cost increase; the consultant estimates an additional \$3 million is needed, with construction expected to begin in Summer 2026.	\$ 3,800,000	\$ 3,800,000
825362 - Replacement/Repair/Rehabilitation of Storm Drain	Wastewater	Environmental Services	Adds \$570K for the Storm Drain Diversion Project at Ahwanee and Borregas to reduce stormwater inflow into the sanitary sewer system.	\$ 570,000	\$ 570,000
825740 - Battery Backup System for Traffic Signals Maintenance	Gas Tax	Public Works	Adds funding for the replacement of battery backup systems for traffic signals based on current market prices and inflation.	\$ 25,000	\$ 25,000
826351 - Recruitment and Training 20-Year Resource Allocation Project	General	Public Safety	Moves Recruitment Costs from Department of Public Safety placeholder recruitment project to new FY 2025/26 and FY 2027/27 recruitment projects.	\$ (3,357,653)	\$ (11,090,111)
826530 - County-Wide Homeless Count	Housing Mitigation	Community Development	Adds funding for City staffing and project management, incentives and materials for event planning and execution, and potential cost-sharing with the County for vendor services.	-	\$ 39,674
827570 - Downtown Parking District Major Maintenance	Parking District	Public Works	Adds funding for resurfacing the South Carroll Parking Lot in FY 2031/32.	-	\$ 82,626
828100 - First-Time Homebuyer Loans	Other Housing	Community Development	Expands program funding through 2035 at an annual amount of \$250K.	\$ 250,000	\$ 2,500,000

FY 2025/26 Projects with Scope Change (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
828260 - SMaRT Post-2021 Rebuild	SMaRT Station Equipment	Environmental Services	Adds funding from \$35.5M to \$50M to account for inflation, final design and updated costs: \$39.1M for equipment and \$2.9M for facility upgrades. \$7.9M has been spent to date (as of Dec. 2024).	\$ 16,735,288	\$ 16,735,288
829620 - Downtown Association	General	Office of the City Manager	Adds funding to support additional events and marketing, with Sunnyvale Downtown Association coordinating the annual Pet Parade and other activities while enhancing efforts to promote <u>Downtown Sunnyvale</u> .	\$ 40,000	\$ 800,000
830210 - Repairs to the Power Generation Facility	Wastewater	Environmental Services	Adds funding to reflect updated service rates and an extended project timeline to accommodate delays related to constructing new power generation facilities, per the latest Clean Water Program schedule.	\$ 160,000	\$ 955,000
830410 - Ortega Park Renovation and Enhancement	Park Dedication	Public Works	Adds funding to replace a deteriorated gazebo in Ortega Park to prevent potential safety hazards.	\$ 420,000	\$ 420,000
830521 ERP System Acquisition, and Support	Technology Services	Information Technology	Aligns funding with the updated replacement schedule (extended from every 10 years to 15 years) and revised system upgrade costs.	-	\$ (8,964,321)
831770 - Illuminated Street Sign Replacement Project	General	Public Works	Adds funding to replace obsolete illuminated street name signs and splits the project over two years.	-	\$ 120,260
832260 - Office of Emergency Services	General	Public Safety	Adds funding to replace items stolen from the Columbia ARKK and to add consultant services for developing two additional emergency plans.	\$ 35,000	\$ 35,000
832270 Permitting System - Change Funding Schedule	Technology Services	Information Technology	Aligns funding with the replacement schedule, updated from every 10 years to every 15 years.	-	\$ (4,552,488)
832750 - City Maintained Tree Inventory	Infrastructure	Public Works	Adds \$175K to update the City's full tree inventory and map each tree via GPS; the previously budgeted \$325K project had been inactive.	\$ 500,000	\$ 500,000
833010 - Bicycle and Pedestrian Safety Improvements	Capital Projects - Traffic Impact Fees	Public Works	Adds funding to leverage grants for the City's Active Transportation Plan project.	-	\$ 412,000
833020 - Future Traffic Signal Construction (3111)	Capital Projects - Traffic Impact Fees	Public Works	Adds funding to replace 3 traffic signals every five years starting in FY 2028/29.	-	\$ 3,189,644
834150 - DPS FY23/24 Recruitment and Training of Sworn Officers	General	Public Safety	Reduces funding based on salary adjustment.	\$ (579,594)	\$ (261,498)

FY 2025/26 Projects with Scope Change (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
834260 - Cost of Service Study For City Fees	Development Enterprise	Finance	Adds funding to complete a new fee study, as the original became outdated following implementation of the new permitting system in 2023.	\$ 46,600	\$ 46,600
834370 - Traffic Sign Installation and Maintenance	Gas Tax	Public Works	Redistributes the current budget and adds funding from the Gas Tax Fund.	\$ 59,358	\$ 59,358
834550 - Speed Feedback Signs Maintenance and Replacement	Gas Tax	Public Works	Aligns costs with the adjusted replacement cycle from 10 years to 5 years, based on the most recent CIP for the Sunnyvale SNAIL Improvement.	\$ 678,000	\$ 678,000
834600 - Microsoft Server OS and SQL Server Upgrade	Technology Services	Information Technology	Aligns funding with the updated replacement schedule, redistributing allocations based on need.	\$ 256,988	\$ 1,741,598
834790 - Addition to the Heritage Resource Inventory of Sites Associated with Tech	General	Community Development	Adds \$15,510 in funding beyond the current \$75,000 project budget to fully fund the contract for Study Issue CDD #19-05.	\$ 15,510	\$ 15,510
835020 - Sunnyvale Biennial Elections	General	Office of the City Manager	Adds funding Adds funding for the November 2026 election (FY 2026/27) to cover up to five additional ballot measures, depending on recommendations from the Charter Review Committee.	\$ 1,599,103	\$ 1,599,103
835020 - Sunnyvale Biennial Elections	General	Office of the City Manager	Adds funding for the Charter Review Committee to conduct polling in FY 2025/26 to ensure proposed ballot measures reflect community preferences and needs.	\$ 30,000	\$ 30,000
835110 - Digital Accessibility Implementation	Technology Services	Office of the City Manager	Adds funds and renames Project 835110 – Electronic ADA Compliance to support the RFP and implementation ahead of the DOJ deadline, ensuring compliance with federally mandated ADA requirements for City digital content.	\$ 250,000	\$ 600,000
835490 - Community Events & Neighborhood Grants	General	Library and Recreation Services	Adds funding to support additional events and grants through the Community Events and Neighborhood Grants Programs, in alignment with Council goals.	\$ 102,000	\$ 1,843,108
835580 - Replacement DPS Video Surveillance System	Technology Services	Information Technology	Aligns funding to replace the overdue Department of Public Safety video surveillance system to ensure continued functionality.	\$ 384,703	\$ 512,439
835610 - Computer Aided Dispatch (CAD) System Replacement	Technology Services	Information Technology	Increases funding to cover staff costs, equipment upgrades, system maintenance, and licensing over 20 years. An additional \$10 million is needed for implementation and maintenance of the Records Management System (RMS) that supports the CAD system used for dispatching police, fire, and EMS personnel.	\$ 1,349,400	\$ 36,389,281

FY 2025/26 Projects with Scope Change (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
836270 - Community EAI Needs Assessment	General	Office of the City Manager	Increases funding from \$75K to \$180K to cover an expanded scope of work, including a representative survey, additional focus groups, and a digital report.	\$ 105,000	\$ 105,000
836300 - Fire Station 1 Remodel	Infrastructure	Public Works	Adds funding for roof replacement at Fire Station 1, including consultant services and construction costs.	-	\$ 30,000
836310 - Fire Station 3 Remodel	Infrastructure	Public Works	Adds funding for roof replacement at Fire Station 3, including consultant services and construction costs.	-	\$ 575,000
836320 - Fire Station 4 Remodel	Infrastructure	Public Works	Adds funding for roof replacement at Fire Station 4, including consultant services and construction costs.	-	\$ 575,000
836330 - Fire Station 6 Remodel	Infrastructure	Public Works	Adds funding for roof replacement at Fire Station 6, including consultant services and construction costs.	-	\$ 575,000
836360 - Research and Development Fund	Technology Services	Information Technology	Adds funding to extend the project over 20 years, supporting small proof-of-concept projects that give the City flexibility to test new technologies without full investment.	\$ 25,000	\$ 500,000
836380 - WPCP Digester No. 3 Improvement	Wastewater	Environmental Services	Transfers in \$430K from Project 836390 - WPCP Chemical Tank Storage Facility,	\$ 430,000	\$ 430,000
836390 - WPCP Chemical Tank Storage Facility	Wastewater	Environmental Services	Transfers out \$430K to Project 836380 - WPCP Digester No. 3 Improvement, as the original project is canceled due to site restrictions and the completion of the secondary process project.	\$ (430,000)	\$ (430,000)
836920 - Evaluate the City of Sunnyvale Study Issues Process	General	Office of the City Manager	Adds funding to cover increased consultant costs.	\$ 20,000	\$ 20,000
P20201 Wastewater Equipment Replacement	Wastewater	Environmental Services	Aligns the first two years with Environmental Services Department planned replacements, and for the remaining 18 years, with the assumption that some replacements would be deferred if equipment was deemed to not require replacement yet.	\$ (67,588)	\$ (834,866)
Total for Change in Scope:				\$ 23,946,455	\$ 48,107,885

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
834170 - FY25/26 Recruitment and Training of Sworn Officers	General	Public Safety	Adds funding for the FY 25/26 cohort for recruitment, selection, training, and salaries of Public Safety Officers-in-training (PSOIT, new recruits), Public Safety Officer I (PSOI, lateral recruit), and instructors.	\$ 3,466,370	\$ 6,932,740
834180 - FY26/27 Recruitment and Training of Sworn Officers	General	Public Safety	Adds funding for the FY 26/27 cohort for recruitment, selection, training, and salaries of Public Safety Officers-in-training (PSOIT, new recruits), Public Safety Officer I (PSOI, lateral recruit), and instructors.	\$ -	\$ 6,950,103
837100 - Replacement Water Fountains	Infrastructure	Library and Recreation Services	Adds funding to replace all old style push bar water fountains with newer filtered water push bar/ bottle filling station water fountains. Fountains would be replaced in the Recreation building, Theatre, Creative Arts buildings, and Fremont pool. A total of 9 water fountains would be replaced.	\$ 7,000	\$ 35,138
837110 - Fire Station Carpet Replacement	Infrastructure	Public Works	Adds funding to replace the carpet at Fire Stations 3, 4, and 6. The renovation of these Fire Stations is not until the 2030s, however, the carpet is currently worn and can create potential tripping hazards.	\$ 200,000	\$ 200,000
837120 - GIS Utility Network Migration	Water / Wastewater	Environmental Services	Adds funding to transition from the Geometric Network to the Utility Network in ArcGIS Pro. This is based on the Migration Readiness Assessment to ensure long-term functionality, data integrity, and compatibility with modern GIS advancements.	\$ 384,000	\$ 384,000
837130 - Translation of LRS Policy Docs	General	Library and Recreation Services	Adds funding for the translation of the most commonly used Recreation and Library Policy and Program documents to provide more equal access to documents and information for all patrons and program participants.	\$ 27,000	\$ 27,000
837140 - Construction & Demolition Program RFP	Solid Waste	Environmental Services	Adds funding to hire a consultant to develop an RFP and help select an alternate C&D Vendor. State CalGreen Code requires C&D projects to divert a minimum of 65% of nonhazardous material.	\$ 60,000	\$ 60,000
837150 - Murphy Ave Solid Waste Enclosures	Capital Projects - Community Benefits	Environmental Services	Adds funding for an evaluation of solid waste enclosure locations and impacts, designs, and the preparation of construction documents for permitting and implementation. The project will also include the construction of the enclosures.	\$ 81,000	\$ 81,000

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
837160 - Public Litter Cans on Murphy Ave	Solid Waste	Environmental Services	Adds funding to replace and relocate a total of 20 public litter cans (PLCs). The Historic Murphy Ave beautification project necessitates the relocation of PLCs as the existing PLCs are deteriorating and need replacement.	\$ 40,000	\$ 40,000
837170 - SMaRT Station Energy Usage Assessment Study	Solid Waste	Environmental Services	Adds funding for consultant fees to conduct a solar feasibility study to study the future energy demands of the SMaRT Station and options to offset some of that demand to reduce our dependence on PG&E through renewable energies due to the increased energy demands and improved renewable technology.	\$ 50,000	\$ 50,000
837180 - Water System Transmission Line Valve Replacement and Upgrades	Water	Environmental Services	Adds funding for the replacement of 70 water valves ranging in size from 8 to 30 inches over the next three years. The water system covers an area of just over 16 miles throughout the City and serves as the high pressure, critical water infrastructure that supplies the City's distribution system, 28 million gallons of storage tank water, and pump stations.	\$ -	\$ 3,450,000
837190 - Safe Parking Capital Grants Program	General	Community Development	Adds funding for a Council approved program to offer capital grants to non-profit and faith-based organizations to develop Safe Parking sites for vehicularly unhoused households. This is intended to alleviate some of the environmental and quality of life impacts of unhoused individuals sleeping in their vehicles.	\$ 100,000	\$ 100,000
837200 - Santa Clara County Planning Collaborative	Housing Mitigation	Community Development	Adds funding for the Santa Clara County Planning Collaborative (SCCPC) for Calendar Years 2026 and 2027. This amount represents the City's share. SCCPC provides planning resources and technical assistance for the implementation of Housing Element programs and compliance with State law.	\$ 37,000	\$ 37,000
837210 - Fun-on-the-Run (FOTR)	General	Library and Recreation Services	Adds funding to replace equipment on the vehicle, which needs to be replaced on a regular schedule due to high usage. Equipment includes large games (i.e. Jenga, Connect 4, etc.), tables, games, activities supplies, TV and game console, etc.	\$ 23,000	\$ 80,000

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
837220 - Replacement of Recreation Building Video Projectors and Laptop	General	Library and Recreation Services	Adds funding to replace current video projectors with brighter and more current video projectors. Also included is the replacement of the City's recreation building PC laptop.	\$ 8,500	\$ 42,500
837230 - Emergency Operations Communications Support	General	Office of the City Manager	Adds funding to develop the communications materials necessary to conduct essential and robust public outreach during an emergency response.	\$ 35,000	\$ 35,000
837240 - Project Reporting & Community Engagement System	Technology Services	Office of the City Manager	Adds funding to develop and issue an RFP for an online community engagement system to update and integrate or replace the City's existing tools such as Open City Hall and Knack.	\$ 250,000	\$ 250,000
837250 - SharePoint Online – Sunspot Redesign	Technology Services	Office of the City Manager	Adds funding to Redesign the City's intranet site and migrate system from classic to modern SharePoint.	\$ -	\$ 820,371
837260 - Staff Report Summary and Historical Topic Search (Madison AI)	Technology Services	Office of the City Manager	Adds funding to allow staff to better understand the history of a topic when drafting staff reports, speed up staff report writing and improve uniformity of reports.	\$ -	\$ 627,922
837270 - Housing Element Update	Housing Mitigation / General	Community Development	Adds funding for consultant costs to prepare the Housing Element of the General Plan, which is required by Housing Community Development (HCD) to be updated every 8 years.	\$ -	\$ 1,100,000
837280 - CRM Implementation (Smart City - 9)	Technology Services	Office of the City Manager	Adds funding to replace the Microsoft Dynamics Customer Relationship Management (CRM) system.	\$ 2,603,883	\$ 5,207,766
837290 - Host Compliance (Granicus)	Technology Services	Finance	Adds funding for a TOT compliance module for short-term rentals.	\$ 35,000	\$ 82,037
837300 - Teller Online	Technology Services	Finance	Adds funding for an online collections module for numerous invoices.	\$ 100,459	\$ 100,459

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
837310 - Blade Server Replacement	Technology Services	Information Technology	Adds funding to replace the aging network blade (servers) that have reached end of life.	\$ 882,231	\$ 7,429,583
837320 - SharePoint SunSpot Platform Upgrade	Technology Services	Information Technology	Adds funding to migrate existing SharePoint (SunSpot) to the newest version as the current version is no longer supported.	\$ 200,850	\$ 825,671
837330 - CMMS Replacement	Technology Services	Information Technology	Adds funding to implement the replacement of the computerized maintenance management system (currently Maintenance Connection).	\$ 943,517	\$ 943,517
837340 - VSI Replacement	Technology Services	Library and Recreation Services	Adds funding to implement the replacement of the recreation management system used by LRS and the public.	\$ 293,939	\$ 927,921
837360 - Renovations to 922 E. California	Infrastructure	Public Works	Adds funding to bring this recently acquired building up to standards for use by staff or to lease. Updates will be included for internet, security, cubicles, etc.	\$ 1,200,000	\$ 1,200,000
837370 - Establish Safety Corridors for Speed Limit Reduction	General	Public Works	Adds funding to hire a consultant to conduct collision analysis on all city streets to identify the safety corridors within the City per California's Assembly Bill 43 (AB 43). The consultant will conduct an evaluation to determine whether the posted speed limits could further be reduced on the safety corridors.	\$ -	\$ 300,000
837380 - Las Palmas Tennis Court Lighting	Park Dedication	Public Works	Adds funding to upgrade and modernize lighting at the Las Palmas Park Tennis Court.	\$ 500,000	\$ 500,000
837390 - Golf Sewer Lines - Sunnyvale Muni GC	Park Dedication	Public Works	Adds funding to repair the sewer line from the Sunnyvale Municipal Golf Course main building to the City's sewer system. The sewer line repair will restore proper drainage and wastewater flow.	\$ 75,000	\$ 75,000
837410 - Regulatory Compliance for Storm Drain Outfall	General	Environmental Services	Adds funding for a permit requirement from the Water Board for the annual monitoring and reporting.	\$ 60,000	\$ 300,000
837420 - Public Property Debris Removal	General	Public Works	Adds funding to extend the contract with Tucker Construction to perform abatements of homeless encampments on public property.	\$ 100,000	\$ 200,000
837430 - WPCP Card Key System	Wastewater	Public Works	Adds funding to retrofit card reader systems at buildings at the Water Pollution Control Plant (WPCP). The upgrade is needed to sync to the City's new velocity card reader system.	\$ 150,000	\$ 150,000

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
837440 - Producing Recycled Water	Wastewater	Environmental Services	Adds funding for the installation of a Cloth Media Filter (CMF) packaged plant to produce Recycled Water. The Water Pollution Control Plant (WPCP) operates a 440 acre oxidation pond system as part of the secondary treatment system. The plant violated its NPDES permit for solids discharge (10 NTU) on multiple occasions.	\$ 1,425,000	\$ 2,850,000
837450 - Recycled Water Pipeline Expansion	Water	Environmental Services	Adds funding to extend Recycled Water pipelines. The City has approximately 22 miles of Recycled Water distribution pipelines ranging in diameter from 8 to 36 inches. This project will enable expansion of the distribution network.	\$ -	\$ 1,550,000
837470 - AI Governance Platform and Training	Technology Services	Information Technology	Adds funding to implement a tool for AI security governance and end-user training.	\$ -	\$ 350,000
837500 - BearCat Replacement	Fleet Services	Public Safety	Adds funding to replace the City's aging BearCat armored vehicle. Replacement is necessary to maintain operational readiness and ensure the safety of our personnel and the public. A new vehicle will help us continue providing essential services, protect vital infrastructure, and respond effectively to emergencies in Sunnyvale and the region.	\$ 550,000	\$ 1,424,273
837520 - AMI Implementation	Water	Environmental Services	Adds funding to move forward with a proof of concept for a deployment of new AMI (automated meter infrastructure) equipment, with the support of a consultant. A second phase would include either a partial or complete meter replacement.	\$ -	\$ 21,945,383
837530 - Drone as First Responder Program (DFR)	General	Public Safety	Adds funding to implement a Drone as First Responder (DFR) Pilot Program to improve emergency response and make better use of resources.	\$ 50,000	\$ 50,000
837540 - Mobile Video & Audio Recording System	General	Public Safety	Adds funding to migrate the legacy dash cam video system to a supported platform to ensure compliance with evidence management standards and continued accessibility for staff.	\$ -	\$ 55,000
837550 - Interview Room A/V Recording	General	Public Safety	Adds funding to replace the DPS interview room recording system to meet Investigation operational needs and to provide effective police services.	\$ 75,000	\$ 388,724
837570 - Skate Park Resurfacing	Park Dedication	Public Works	Adds funding to resurface the Skate Park. Currently, the Skate Park cement is cracking, which can create a hazard and leave the city open to liability.	\$ 100,000	\$ 100,000

FY 2025/26 New Projects (No Cleanwater)

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
837580 - SMARSH + eDiscovery Implementation (PRA)	General / Technology Services	Information Technology	Adds funding to implement a Citywide archival system and an electronic discovery system used to manage public record requests in compliance with the Public Records Act (PRA).	\$ 560,177	\$ 1,313,008
837590 - PSOA Staffing Study	General	Human Resources	Adds funding to execute a salary survey for Public Safety salaries and benefits. This project is required in accordance with the PSOA 2025-2027 MOU.	\$ 200,000	\$ 200,000

Total for New Projects: \$ 14,873,926.00 \$ 69,771,116.00

FY 2025/26 New Unfunded Projects

Project Name	Fund	Department	Description of Change	FY 25/26 Change	20-Yr Impact Change
933940 - RMS Replacement in CAD Project	Technology Services	Public Safety	Added Records Management System Replacement to the Unfunded List	\$ -	\$ 4,763,507

Total Unfunded Projects: \$ - \$ 4,763,507

FY 2025/26 Cleanwater Program Changes

Cleanwater budget assumptions updated with latest funding estimates and project delivery timing. Current and increased funding provided through a combination of Federal and State low-interest loans and future anticipated issuance of revenue bonds. Also increases funding to complete design and fund construction of the new Cleanwater Center building which had been deferred in previous budgets. Projects are funded by Wastewater and managed by Department of Public Works - Project Administration Services Unit.

Project Name	FY 25/26 Change	20-Yr Impact Change
831470 - SCWP Construction Management	\$ (6,297,384)	\$ 17,559,618
833150 - SCWP Existing Plant Rehabilitation - Split Flow	\$ (15,950,814)	\$ 8,481,690
833210 - Secondary Treatment & Thickening/Dewatering - CAS Stage 1	\$ (77,392,568)	\$ 3,642,704
833240 - Cleanwater Center	\$ 7,664,025	\$ 72,362,853
833270 - SCWP Community Improvements	\$ (738,355)	\$ (916,067)
835500 - Cleanwater Program Reserve	\$ 37,716,233	\$ 37,716,233
835530 - Cleanwater Center - Stage 2	\$ (51,109,117)	\$ (57,737,434)
Total Cleanwater Program Changes:		
	\$ (106,107,980)	\$ 81,109,597

TRAFFIC AND TRANSPORTATION

THIS PAGE IS INTENTIONALLY BLANK

TRAFFIC AND TRANSPORTATION

A well-planned and maintained transportation infrastructure is critical for ensuring livable local communities, balancing housing and jobs, and supporting economic development. Sunnyvale has developed an excellent transportation infrastructure, but regional and local growth and the passage of time put continual strain on capacity and maintenance needs. The City has proactively conducted long-range planning for traffic and transportation needs for several years and is actively involved in countywide planning efforts. Several long-range plans guide the development of the projects budget for the short and long term. These are: Valley Transportation Plan (VTP) 2050; Transportation Strategic Program; Bicycle Capital Improvement Program; Active Transportation Plan (2020); Vision Zero Plan (2019); Downtown Specific Plan; Lawrence Station Area Plan; El Camino Real Specific Plan; Tasman/ Fair Oaks Bicycle and Pedestrian Circulation Plan; Moffett Park Specific Plan; Fair Oaks Junction Sense of Place Plan; and Peery Park Specific Plan. Each plan identifies traffic and transportation projects important for a specific area, the City, and/or the region. These plans and a listing of their Sunnyvale transportation projects are detailed later in this section. These plans allow the City to undertake a coordinated traffic and transportation capital projects program and to position itself to compete strongly for outside specialized discretionary funding as it becomes available. In April 2025, the City Council adopted the 2025-2027 Council Strategic Priorities, which prioritized implementing bicycle, pedestrian, and safe routes to school improvements as identified in the Active Transportation Plan and Vision Zero Plan elements and traffic calming patterns.

MAJOR PROJECTS

Evelyn Multi-use Trail. The City proposes to install a Class I Shared-Use Path on the north side of Evelyn Avenue from Bernardo Avenue to Mathilda Place and connections to cross-street bike and pedestrian facilities. The Class I Shared-Use Path will provide bicyclists, pedestrians, and other active transportation mode users with a low-stress, separated path to travel along this arterial route. The trail will also connect to other bicycle lanes/routes and pedestrian facilities through this segment at Bernardo Avenue, Mary Avenue, Sunset Avenue, Pastoria Avenue, Florence Street, and the Mathilda loop ramp. The project is funded through the City's Transportation Impact Fee fund and State funding through the California Parks and Recreation Department Specified Grants Program. The total project, including final design and construction, is estimated to cost \$4.1 million.

East Channel Trail Study. The City is conducting a planning study to assess the feasibility of constructing a new bicycle and pedestrian trail between the San Francisco Bay Trail and Homestead Road, spanning approximately 6 miles. The trail would primarily follow Valley Water's East Channel maintenance road to create a continuous, safe, and accessible Class I shared-use path where feasible.

The study will assess existing conditions, design constraints, potential alignments, crossing types, pedestrian and bicycle amenities, and right-of-way and utility impacts. It will feature robust community engagement through pop-ups, meetings, and surveys. The planning study is fully funded with an estimated budget of \$2.8 million, including \$800,000 in Measure B funds, a \$1 million voluntary contribution from Google, and a \$1 million local match from the City. The study is expected to be completed in 2026.

Mary Avenue Overcrossing. A Draft Environmental Impact Report (EIR) is anticipated to be released in fall 2025. The Final EIR and the selection of the project alternative are tentatively scheduled to be presented to the City Council in early 2026. Community engagement events will occur when the Draft EIR is released to receive public comments. The current environmental phase is funded through City Transportation Impact Fee funds. Construction is estimated to cost \$163 million, which has not yet been programmed.

Install Sidewalk on Poplar Ave. In May 2023, the findings of the Poplar Avenue Sidewalk Study (DPW 21-04) were presented to the City Council for acceptance and Council action. Staff recommended Council's acceptance of the findings of the study. The Poplar sidewalk project is planned to design and construct a 6-foot-wide sidewalk with a 4-foot-wide park strip along the east side of Poplar Avenue. The goal is to provide improved pedestrian access from El Camino Real to Peterson Middle School. The project also includes a sidewalk on the north and south sides of Bryant Way east of Poplar Avenue to close an adjacent sidewalk gap. In February 2024, the Council approved Transportation Development Act funds for design. The design phase has started, and staff anticipate completing the design during the summer of 2025. Staff is currently applying for grant funding for the construction phase.

Bernardo Avenue Undercrossing at Central Expressway and Caltrain. Preliminary design and environmental clearance are underway for a bicycle and pedestrian connection on Bernardo Avenue near Evelyn Avenue under the Central Expressway and the Caltrain Railroad tracks. The City of Mountain View is contributing approximately half the funding for the environmental analysis, which is anticipated to be completed in spring 2025. The funding for the final design and construction phases is being partially covered by VTA Measure B and City Transportation Impact Fee funding. Staff is looking into funding sources for the remainder. The project's estimated final design and construction cost is approximately \$65 million.

Stevens Creek Trail Extension. VTA Measure B funds have been awarded for the environmental and design phase. This project will complete the section between W. Remington Drive and W. Fremont Avenue of the existing gap in the trail. The trail runs from the Bay Trail in Mountain View to McClellan Ranch Park in Cupertino. The project's estimated construction cost is currently \$35 million.

The City of Mountain View is leading the effort to complete the trail section between Dale Avenue/Heatherstone Way and W. Remington Drive with the City of Sunnyvale as a partner. The project will begin in 2025 with a feasibility study, with environmental clearance and conceptual design to follow. VTA Measure B funds have been secured for this portion of the trail.

VTA SR 85 Noise Reduction Program. VTA is working with communities along State Route 85 and Caltrans to study, test, and implement noise reduction treatments to address existing noise concerns along the corridor. The project is currently in Phase 2 (the pilot testing phase), which includes design, installation, and before/after measurements of treatments identified in Phase 1. Sunnyvale is one of the community stakeholders in this effort being led by VTA. It is anticipated that this project will start construction in summer 2025.

Pavement Rehabilitation and Annual Slurry Seal of City Streets. Each year, the Department of Public Works Pavement Operations staff surveys half of the City's streets and

inputs the data into the City's pavement management system. The system produces a list of deteriorated streets, and plans are made to repair, slurry seal, double chip seal, overlay, or reconstruct the streets as needed. A constant level of funding for pavement rehabilitation is budgeted for the Department of Public Works. The Annual Slurry Seal of City Streets project covers contract construction costs of slurry sealing a portion of the City's residential streets each year. Similarly, the annual contract Slurry Seal project covers slurry sealing on the City's major, high-volume streets. The Pavement Rehabilitation project budgets the additional funds needed in the years where more extensive rehabilitation work is required. These projects' budgets total \$233.7 million over the twenty-year plan.

Sidewalks, Curbs, and Gutters. The City maintains the vast majority of sidewalks, curbs, and gutters. Street trees often push up or break this infrastructure; as they grow over time, they slowly damage sidewalks, curbs, and gutters with their roots. The budget includes two projects to address this issue: one is to provide ongoing funding to repair damaged sidewalks and remove nuisance street trees, and the other is to repair sidewalks that become out of compliance with the Americans with Disabilities Act. The two projects provide \$68.8 million over twenty years in funding for these repairs.

UNFUNDED PROJECTS

Unfunded projects fall into two primary categories. First, several projects are in the unfunded category until a funding source is identified. Many of these projects are strong candidates for outside grants, and the project will move into the funded status when a funding source is secured. Second, projects have been placed in the unfunded category if the timing of the project is dependent on actions from another agency. For example, the Caltrain Grade Separations must be coordinated with Caltrain, and this coordination effort will impact the staffing resources for this project.

In addition to the unfunded projects, the eleven long-range traffic and transportation plans highlight project goals for specific plan areas. The remaining projects will be moved into the City's project budget when funding sources are secured. These project lists are updated annually to track the progress the City is making toward the long-range goals outlined in these plans. Some projects, particularly many of those in the VTP 2050, are not the responsibility of the City and therefore will not move into the City's projects budget. However, staff will continue to monitor and update the project list as these projects are in Sunnyvale and will impact the City's transportation infrastructure.

TRAFFIC AND TRANSPORTATION LONG-RANGE PLANS

Several Traffic and Transportation planning documents will inform capital projects over the next twenty years. As funding opportunities present themselves, individual projects will be brought before the Council for consideration and budget appropriation. Additionally, some projects are included in more than one of the planning documents listed below, as these planning documents often overlap in scope and purpose in the processes of long-range planning for the City. The eleven planning documents are detailed below.

Valley Transportation Plan

The [Valley Transportation Plan](#), or VTP, is the long-range vision for transportation in Santa Clara County. The Valley Transportation Authority (VTA), in its role as the Congestion

Management Agency for Santa Clara County, is responsible for preparing and periodically updating the VTP every four to five years on a cycle coinciding with the update of the [Bay Area's Regional Transportation Plan](#) (RTP). The current plan is titled VTP 2050. VTP 2020 identifies major regional transportation programs and projects for Santa Clara County and presents Federal and State transportation funding priorities against funding constraints. Under guidelines by the Federal government, long-range transportation plans must be financially constrained. Constrained projects are those funded with projected revenues from existing sources, such as sales tax measures, Federal flexible formula funds, or gas tax subventions, and sources that can be reasonably expected to be available during the life of the plan. Unconstrained projects are those that do not have identified funding sources. The plan also includes projects that do not meet the VTP criteria for constrained funding but are considered improvements of regional significance. These are identified in the plan as unconstrained projects.

Staff from cities in the County participate in developing the VTP and submit candidate projects for consideration for inclusion in the plan. Projects must appear in the VTP and RTP to be eligible for most federal, state, and regional funding. The City submits candidate projects which are subsequently ranked and determined to be constrained or unconstrained.

It should be noted that the VTP is intended solely as a planning and policy framework, and the projects identified for the City of Sunnyvale are not to be used as a programming document for which the City is responsible for carrying out.

Transportation Strategic Program

Initiated in 1998, the Transportation Strategic Program (TSP) provides the financial basis for the City's current land use and transportation plan. It is updated every five to six years with the update of the Computerized Transportation Model, which upholds the fair valuation of the Transportation Impact Fee. Without adopting a program and identifying funding for improvements, traffic congestion could negatively affect the City's development, economy, neighborhoods, and environmental health.

The TSP supports land development potential envisioned by the [General Plan Land Use and Transportation Element](#) and was approved by Council in 2003. Key components of the Transportation Strategic Program effort were establishing a revenue mechanism to recognize the impact of new development on future forecast transportation deficiencies. Council approved the imposition of a two-tiered Transportation Impact Fee to address the transportation capacity needs for areas inside (north of Route 237) and outside the Moffett Industrial Park (south of Route 237), execution of a cost sharing agreement with the County of Santa Clara for County Expressway improvements, and pursuit of outside matching funding for certain transportation improvements. It should be noted that the timing of these projects is uncertain, given that they depend on traffic congestion from the growth of the City; project timing will be reassessed periodically. The primary sources of funding will be grants and transportation impact fees.

The TSP and Transportation Impact Fees were updated and approved by the City Council in August 2017. State or regional grant funds will often augment funds from Transportation Impact Fees. The funded amounts on the table below are the City Transportation Impact Fees allocated to the listed projects.

ANTICIPATED PROJECT YEAR	PROJECT DESCRIPTION	COST (\$M)	FUNDED AMOUNT
Complete	Mathilda Improvements at 237, 101	\$40.00	\$10.25
TBD	Mary Avenue Extension	\$78.00	\$1.01
TBD	Lawrence Grade Separations at Reed/Monroe, Kifer, and Arques	\$440.00	—
TBD	Caltrain Grade Separation at Mary Avenue and at Sunnyvale Avenue	\$180.00	\$5.73
TBD	Lawrence/Oakmead Grade Separation	\$60.00	—
TBD	Lawrence/Tasman Depress LRT under intersection	\$23.60	—
TBD	Mary/Central Intersection add 3rd westbound left-turn lane	\$1.50	—
TBD	Complete Sidewalks	\$9.80	\$0.85
TBD	Complete Bike Network	\$10.00	\$3.94
TBD	Pedestrian Facility Improvements	\$5.00	\$4.09
TBD	Bernardo/Caltrain Bike/Pedestrian Undercrossing	\$9.40	\$0.64
TBD	ITS Projects (including Mathilda Avenue)	\$20.00	—
TBD	Future Traffic Signal Construction	\$10.00	\$0.58
TBD	Intersection Improvements (including Wolfe and El Camino Real)	\$13.00	\$0.42
TBD	Lawrence/Wildwood/Lakewood Intersection Signalization	\$5.80	—
Complete	Mathilda/Maude Left Turn Extension	\$0.30	\$0.30
TBD	Traffic signals replacements over 20-year period	\$102.90	—
Total - Transportation Strategic Program		\$1,009.30	\$27.81

**Projects are in preliminary discussion/design phases. Costs are projecting higher than anticipated. It is too soon to provide project estimations.*

Active Transportation Plan

In 2020, the City adopted the [Active Transportation Plan](#) (ATP), which consists of a Bicycle Plan, Pedestrian Plan, and Safe Routes to School Plan. The ATP is designed as a long-range planning document focused on encouraging bicycling and walking as a safe and healthy alternative to motor vehicles. It provides a strategy to develop a comprehensive bicycling network that creates access to transit, schools, and other destinations. The Bicycle Plan chapter describes the bicycling needs in the city, defines the ATP's bicycling goals, and outlines the citywide bicycle infrastructure and programmatic recommendations. The Pedestrian Plan chapter describes pedestrian needs in the city, defines the ATP's pedestrian goals, and outlines the citywide pedestrian infrastructure and programmatic recommendations. The Safe Routes to School Plan chapter identifies barriers to

accessing schools by walking or bicycling and outlines recommendations for the 21 public schools serving Sunnyvale students.

The purpose of the ATP is to assist the City in creating a safe, connected, and efficient citywide walking and bicycling network. The plan outlines goals and strategies, suggested infrastructure projects and supporting programs, and identified funding sources and implementation priorities. The ATP will serve as a guide for the City Council to consider future action and to approve future grant applications. These projects can be funded by a variety of local, regional, state, and federal sources, including 2016 VTA Measure B, One Bay Area Grant, Transportation Fund for Clean Air, Transportation Development Act Article 3, Vehicle Emissions Reduction Based at Schools Program, Congestion Mitigation and Air Quality Improvement Program, Surface Transportation Program, Active Transportation Program, Highway Safety Improvement Program, Sustainable Transportation Planning Grants, Road Maintenance and Rehabilitation Program, and Development Fees (such as the Transportation Impact Fee).

Vision Zero Plan

In 2019, the City adopted the Vision Zero Plan, which was developed through analysis of collision records and input through community outreach events to develop Collision Trends, the High Injury Network, Collision Profiles, a Countermeasure Toolbox, a list of priority Project Locations, and Implementable Actions. The Collision Trends, High Injury Network, and Collision Profiles help the City understand the “who, what, when, where and why” collisions result in fatalities or serious injuries. The Countermeasure Toolbox, ten Priority Project Locations, and the Implementable Actions provide the City with recommendations to improve traffic safety. The Plan aims to reduce fatalities and serious injuries by 50 percent by 2029 and to continue improving traffic safety toward zero fatal and serious injury collisions in the following ten years. The Plan also includes a call to action to make Sunnyvale’s streets safer, especially for biking and walking.

Downtown Specific Plan

The [2020 Downtown Specific Plan](#) is an update to the 2013 Downtown Specific Plan. A key component of the plan is traffic and transportation improvements. It builds on the General Plan land uses and heights approved by Council and provides more specific direction about public and private improvements, including goals and policies, building design guidelines, and infrastructure improvements. Council approved the 2020 Plan on Aug. 11, 2020 (RTC 20-0726), along with Municipal Code changes and a Zoning Map change to align with the amendments to reflect permitted land uses and applicable development standards.

The Plan area comprises roughly 125 acres, generally bounded by Evelyn Avenue to the north, Bayview Avenue to the east, El Camino Real to the south, and Charles Street to the west. Its focus is on three goals: (1) establishing a common vision for the downtown, (2) defining a unique market niche, and (3) creating the framework to link together current and future downtown projects into a vibrant, cohesive place.

Lawrence Station Area Plan

The City adopted the Lawrence Station Area Plan in 2016 to promote development near the Lawrence Caltrain Station that could encourage high ridership. Following the 2016 adoption, the City initiated a study to increase the allowable number of housing units in the plan area, which was later adopted by the City Council in 2021. The City also adopted the Lawrence

Station Sense of Place Plan to improve mobility and safety for pedestrians, bicyclists, and transit users. The Sense of Place Plan includes improvements to the existing public right-of-way and new circulation improvements through private property with public access. Key components include:

- Streetscape enhancements to public streets while retaining existing travel lanes.
- Enhancements include a new landscaped median on Kifer Road, wider bicycle lanes with buffers, and a consistent sidewalk design with street trees and lighting.
- Vehicular and pedestrian-scale wayfinding signage to increase the visibility and access to the Lawrence station.

El Camino Real Specific Plan

The City adopted the El Camino Real Specific Plan in 2022. The Plan aims to refine and guide the future vision of Sunnyvale's El Camino Real as a vibrant, mixed-use corridor with improved streetscapes and safer environments for walking, bicycling, and other modes of transportation. The Plan updates and builds on the successes of the 2007 Precise Plan for El Camino Real and the corridor's assets, and includes a comprehensive strategy to address land use, economic vitality, building forms, multimodal connectivity, and the streetscape (sidewalks, landscaping and public space). Streetscape and road improvements will provide safety and help promote everyday walking, biking, and transit use in and around the corridor. One of the Plan's Vision Elements is to provide safe and convenient multi-modal access and to offer users vibrant destinations and a people-friendly environment.

Fair Oaks Junction Sense of Place Plan

The [Fair Oaks Junction Sense of Place Plan](#) was developed to augment a re-zoning of the Futures Area 6, which is generally bounded by Wolfe Road to the north, North Fair Oaks Avenue to the west, Arques Avenue to the south, and Britton Avenue to the east. Future Area 6 is one of several sites in Sunnyvale that were zoned to transition from Industrial to Residential uses. In July 1993, the City Council executed a General Plan Amendment designating the parcels in this area to allow up to 27 dwelling units per acre. The goals of the Plan are to:

- Enhance the quality of life for residents within the North Fair Oaks and Wolfe area (Futures Area 6) and its vicinity through improved pedestrian access to parks and open spaces, schools, retail amenities, and public transportation.
- Encourage increased pedestrian, bicycle, and transit use through streetscape improvements, land use planning, and architectural design.
- Aim to establish complete street designs that accommodate movements of all modes of transportation, including bicycle, pedestrian, and transit traffic.

The Plan identifies a set of streetscape enhancements to apply to roads and paths in the area, including new sidewalks, wide sidewalks, specialized lighting, enhanced intersection features for pedestrians, gateways, and other features of interest, and a bike path along the East Channel. While developers would provide most improvements as properties are redeveloped, a Sense of Place fee was also enacted to fund improvements in areas not subject to redevelopment and where sidewalks are not anticipated to be provided by redevelopment.

Since the original General Plan and subsequent Zoning Changes, the area has slowly transitioned to residential uses. By 2012, several parcels were redeveloped for residential use,

which initiated the creation of a residential neighborhood. In 2011, the City Council ranked a Study Issue to study the area's pedestrian and bicycle circulation and sense of place.

Tasman/Fair Oaks Bicycle and Pedestrian Circulation Plan

The [Tasman/Fair Oaks Bicycle and Pedestrian Circulation Plan](#) was developed to complement re-zoning the area around the Fair Oaks light rail station to higher-density residential from low-rise industrial. The City sought to encourage growth in the area to develop in a way that promotes the use of public transit and encourages bicycle and pedestrian activity. The Plan identifies a set of streetscape enhancements to apply to roads and paths in the area, including new sidewalks, wide sidewalks, specialized lighting, enhanced intersection features for pedestrians, gateways, and other features of interest, and a bike path along the East Channel. While developers would provide most improvements as properties are redeveloped, a Sense of Place fee was enacted to fund improvements in areas not subject to redevelopment, like the East Channel Trail, and areas where sidewalks are not anticipated to be provided by redevelopment. Most improvements are completed or in progress, except for the East Channel Trail.

Peery Park Specific Plan

The [Peery Park Specific Plan](#) was prepared to guide private and public investment activities within the Plan Area and to support and promote the type of investment that will enhance the beauty and vitality of this major City workplace district. The Peery Park Sense of Place Plan was created to support the Peery Park Specific Plan's economic, community, and placemaking goals.

The plan recommends specific physical and programmatic improvements to enhance district activity and "business livability" for workers and nearby residents, strengthen support of Peery Park's business and innovation ecosystem, and increase its appeal to prospective employees and employers. In conjunction with adopting the Plan, a Sense of Place Fee was enacted by the City, and property owners will be responsible for paying into this program as redevelopment occurs.

Once funding is collected, it will be used for specific improvements within the Plan area, associated with the following (and detailed in the Plan):

- New shuttle (or bus) stops associated with the Peery Park Rides program and other transit stops;
- Streetscape improvements to Pastoria Avenue and Potrero Avenue;
- Improvements and enhancements to bike lanes throughout the Plan area; and
- Crosswalks with in-roadway warning lights.

Moffett Park Specific Plan

The [Moffett Park Specific Plan](#) was prepared to enhance economic development opportunities in the Moffett Industrial Park area. A component of the Plan examined transportation infrastructure. While most transportation capacity needs are incorporated into other plans, the Specific Plan did call out as a desirable improvement the provision of bicycle and pedestrian trails along the East and West Channels in the Park. These trails would be constructed if outside revenue is secured.

802150 - Utility Undergrounding Cost Sharing

Originating Year:	1996	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Arnold Chu

Project Description/Scope/Purpose

This project is intended to provide matching funds for the City's portion of undergrounding of overhead utilities work. The Sunnyvale Municipal Code (SMC) Title 19.38.100 requires that developments underground overhead utilities. The City is sometimes obligated to pay for portions of utility undergrounding that extend beyond property lines or cross City streets. Developers are reimbursed by the City for performing undergrounding work beyond a developer's obligations.

Current projects: 1101 Elko Drive (51-room hotel) with a City cost-share responsibility not to exceed \$217,000 and 258 West California Avenue (two-lot subdivision) with a City cost-share responsibility not to exceed \$16,250.

Upcoming development: 1296 Lawrence Station (135-room hotel).

Project Evaluation and Analysis

In circumstances where the developer is required by the SMC to underground utilities, the City must participate accordingly. Private development projects are demand-driven and cannot be planned ahead by the City and funding this project allows budget to be available when needed for the City to meet this requirement.

Fiscal Impact

The budget in FY 2032/33 is for planning. The funds are offset by private developers. There are no anticipated operating cost impacts.

Funding Sources

General Fund

820120 - Repaint Street Light Poles

Originating Year:	1998	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for routine repainting of the street light poles to prevent corrosion and deterioration. This project is funded in a 20-year cycle to maintain the entire inventory of street light poles. The work in current cycle that begin in 2014 has been completed and will resume in FY 2034/35.

Project Evaluation and Analysis

This project will preserve the City's investment in its street lighting infrastructure by protecting light poles against corrosion. This will also present a good public image as an economic center. Failure to protect this infrastructure investment can accelerate the deterioration, making them a safety hazard, as well as adding blight leading to a public relations issue.

Fiscal Impact

This project is funded by the Gas Tax Fund. Each pole costs approximately \$600 to repaint. Current funding will allow approximately one-fifth of the remaining poles to be painted biannually. With an expectation that painting should be approximately every 20 years, poles will be monitored and evaluated for repainting as needed.

No additional operating costs are required.

820130 - Routine Resurfacing of City Owned Parking Lots

Originating Year:	1998	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project funds resurfacing (including preparation, patching, slurry seal, curb painting and striping) of City-owned parking lots. Lots are resurveyed by staff every two years to update condition, scheduling, and estimated cost. Estimates are based on past costs, current conditions, and projected material costs. Changes in material prices, related projects, and delays can result in cost and timing changes. The resurfacing of parking lots is a seven year cycle.

Scheduled resurfacing includes the following:
FY 2024/25 - Community Center Lots
FY 2025/26 - Library Parking Lot
FY 2026/27 - Corp Yard
FY 2027/28 - Various Park parking lots (To be determined based on current conditions, budget, and department needs)
FY 2030/31 - Civic Center Parking Lot
FY 2031/32 - Community Center Parking Lot

This project also covers all of the remaining parking lots within the Civic Center and will be updated after the completion of the new Civic Center. Funding in other years serves as a placeholder for resurfacing that has yet to be determined.

Additionally, beginning in FY 20/23/31, \$40,000 will be programmed every five years for minor work.

Project Evaluation and Analysis

The alternative to this project is allowing the parking lots to deteriorate and reconstruct the most affected areas. Reconstruction costs approximately six times more than resurfacing.

Fiscal Impact

This project is funded by the General Fund, Water Supply and Distribution Fund, Wastewater Management Fund, Solid Waste Management Fund, Park Dedication Fund based on anticipated scope of work across the twenty-year planning period. For the Park Dedication funded portion by State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

Funding from General Fund, Water Supply and Distribution Fund, Wastewater Management Fund, Solid Waste Management Fund, Park Dedication Fund, and Infrastructure Fund Reserve.

820180 - Traffic Signal Controller Replacement

Originating Year:	1999	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project provides for the replacement of traffic signal controllers, AATMS software, controller cabinets, communication equipment, and other components at approximately 15–20-year intervals due to new Federal and State requirements such as environmentally friendly components, NFPA Personal Safety requirements and obsolescence or changes in functionality. This project improves traffic flow at intersections and increases the reliability of the City's Traffic Management Center (TMC) systems, Intelligent Transportation Systems (ITS) components and other traffic signal equipment and helps enhance staff safety at the intersections.

The City operates and maintains a total of 138 traffic signals. The replacement costs, including contingency of the above equipment, vary depending on the location of the traffic signal. The replacement schedule is based on years of service, date of last upgrade, or as needed due to wear and tear. These ITS components, computer-based controllers, controller software, licensing fees for ATMS software that allows to communicate to all signalized intersections and other major control components deteriorate and are outdated with time and replacement parts become difficult to find as the equipment and software is phased out by the manufacturers or industry standards.

The Traffic Signal Controller Locations for replacement are as follows:

FY 2024/25 - Enterprise Way/Moffett Park-Manila Dr and Fair Oaks Ave/Old San Francisco Rd

FY 2025/26 - Fair Oaks/Arques and Fair Oaks/Maude, Fair Oaks/Duane, Fair Oaks/Caliente, Fair Oaks/Ahwanee, Tasman/Reamwood and Java/Borregas, Hollenbeck/Torrington, Tasman/Adobe Wells-Birchwood, and Mary/Washington are expected to be replaced.

The future years will be programmed with the next CIP cycle.

Project Evaluation and Analysis

Traffic signal equipment slated for replacement do not meet City and/or industry standards, are obsolete, and parts are no longer available. In addition, this equipment will not integrate and communicate with current TMC systems. If not replaced, possible future failures will require immediate replacement that will cause a long-term shutdown of the Traffic Management Systems while equipment is ordered and delivered. Therefore, this equipment is essential to enhance the safety of pedestrians, bicyclists and vehicular traffic.

Fiscal Impact

Project costs are based on bids and prices from manufacturers and contractors. Costs are budgeted to replace three (3) controller cabinets and other ITS components per year. However, depending upon current market pricing for both material and labor costs adjusted for inflation, fewer locations and components could be replaced as scheduled.

Funding Sources

Gas Tax Fund

820190 - Traffic Signal Hardware and Wiring

Originating Year:	1999	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Matthew Hoang

Project Description/Scope/Purpose

This project provides funding for design and construction for replacement of traffic signal underground conduits and signal pole structures at the end of their estimated life span. Underground cables and conduits have a life expectancy of approximately 35 years. Signals identified for replacement are evaluated by location specific assessments based upon an inventory of traffic signal life cycles. The City has 138 traffic signals. Out of these, 72 percent are beyond their design life and are due for replacement.

The traffic signals at South Fair Oaks Avenue/California Avenue and S Bernardo Avenue/Heatherstone Way are being reconstructed in FY 2024/25.

The traffic signals at South Fair Oaks Avenue/E Olive Avenue, and W Maude Avenue/N Pastoria Avenue are being designed in FY 2024/25 and are expected to start construction in FY 2025/26.

For future projects, design and construction for two traffic signals will be performed every three years. Bernardo/Washington, Mary/Knickerbocker, and Mary/Cascade will be designed in FY 2026/27 and FY 2027/28 and constructed in FY 2028/29. Mary/Ticonderoga, Mary/Remington, and Wolfe/Old San Francisco Road will be designed in FY 2029/30 and FY 2030/31 and constructed in FY 2031/32.

Project Evaluation and Analysis

Underground conduits/substructures, as they age and corrode, become filled with dirt and water and cannot be cleaned. Failure to replace systems may result in wire failure in the future with no means of quick replacement and signal shutdown for multiple days until replaced. Traffic signal poles and associated hardware are evaluated for replacement concurrently in order to consider updated design standards and condition of infrastructure. Project costs are based on bid history and construction prices received.

Fiscal Impact

The budget provided is sufficient for three signals per three-year cycle. Project costs are based on bid history and construction prices received. Near term funding levels are calibrated to match conditions in the field.

820200 - Traffic Signal Light Emitting Diode (LED) Array Replacements

Originating Year:	1998	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project funds replacement of red, yellow, and green vehicular and pedestrian traffic signal light emitting diode arrays (LEDs) as they approach the end of their useful life. With the advances in technology the vehicular LED modules are now warrantied for 15 years, but experience has indicated that 17 years is the actual life cycle. Pedestrian LED modules are warrantied for five years but their life expectancy is seven years. This could also fund the replacement of LED beacons and indications used for advanced warning and pedestrian crosswalk enhancements. LEDs result in significant cost savings to the City in power consumption and annual replacement costs.

Starting in FY 2028/29 through FY 2031/32, Pedestrian LEDs will be replaced costing \$67,048 per year.

Starting in FY 2035/36 through FY 2038/39, Vehicle LEDs and Pedestrian LEDs will be replaced costing \$214,200 per year.

Project Evaluation and Analysis

This project will replace existing LED traffic signal indications once they become obsolete, reducing City liability and complying with Federal, State and accepted professional standards on a rotating basis every seven years for pedestrian signals and every 17 years for vehicle indications on a proactive basis prior to emergency failure.

Fiscal Impact

Cost savings from the ongoing installation of LEDs are already reflected in the Department of Public Works' operating budget.

823911 - Bernardo Avenue Caltrain Under-crossing

Originating Year:	2003	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

This project provides funding for the design and construction of the Bernardo Avenue Caltrain Undercrossing. The undercrossing will provide a bicycle and pedestrian connection on Bernardo Avenue near Evelyn Avenue and Central Expressway under the Caltrain Railroad tracks and Central Expressway. The undercrossing will be important for bicycle and pedestrian circulation which need improvement in the western part of the City.

The undercrossing will also provide a viable connection to the northern part of the City where there are many employers and high-density residential developments. This project is a partnership with the City of Mountain View. The cost estimate for the design and construction phases of the project is \$65,000,000.

In 2016, Measure B was approved by Santa Clara County voters to implement a sales tax to fund transportation projects. The Bernardo Avenue Caltrain Undercrossing project was listed in the Measure B legislation as eligible for funding. In 2020, the project received Measure B funding dedication of \$18,000,000 (\$3,000,000 for design and \$15,000,000 for construction) through a competitive grant application process for Bicycle and Pedestrian Capital Projects. Additionally, \$2.5 million has been earmarked in the 2023 Federal Appropriations bills.

On August 13, 2024, City Council selected the Eastern Option as the Locally Preferred Alternative. CEQA environmental clearance was certified in 2024 and NEPA in early 2025. Caltrain's environmental documentation is being completed as part of CIP 832910 and is expected in early 2026.

Project Evaluation and Analysis

The project would increase the service level for bicyclists and pedestrians living and/or working in Sunnyvale by significantly leveraging VTA and other grant funds. There are no viable alternatives for this project as the railroad presents a physical barrier to bicycle and pedestrian travel in this section of the City. During construction, there may be slight impacts to vehicle, bicycle, and pedestrian travel at the adjacent roadways and some disruption to Caltrain operations. However, after completion, the undercrossing will improve all travel modes.

Fiscal Impact

Estimates are updated to latest cost estimates done by Caltrain and includes cost for initial design, construction and Caltrain staff time. These estimates may be adjusted with further refinement project delivery method selection and construction cost escalations.. There likely would be ongoing electricity, landscaping, and walkway cleaning costs. The funding source for the local match contribution will be Transportation Impact Fee revenue. The cost estimates have been revised based on information provided by Caltrain staff. VTA 2016 Measure B funding will be appropriated as part of execution of grant agreement. Additionally, staff is applying for grant funding to fill the construction funding gap.

In addition to VTA 2016 Measure B funds, this project is eligible for federal funds and a 50/50 cost-sharing with the City of Mountain View. City staff is currently negotiating a cost-sharing agreement with the City of Mountain View.

Funding Sources

Measure B, Capital Projects - Transportation Impact Fees, City of Mountain View, Federal Appropriation, Future grant funding.

825070 - Bicycle Map Revision

Originating Year:	2004	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project funds a comprehensive bicycle map revision every 10 years to account for changes and additions to the City's bicycle network. The latest revision of the map was completed in FY 2021/22. Minor updates to the bike map will be considered after every five years. The City typically completes 2-3 bicycle projects per year, which result in significant changes. The project cost includes conducting in-depth research of the bicycle routes, paths, bike lanes, and trailways within the City and their connectivity with the adjacent jurisdictions, and publishing a map showing these bike facilities for information of general public to encourage use of bikes throughout the City. A Geographic Information System (GIS) that includes existing and proposed bicycle facilities will be created in FY 2027/28.

Project Evaluation and Analysis

Per Section 10.56.286 of the City's Municipal Code, "There shall be maintained on file in the Department of Public Works and available for inspection by the public, a map showing the bicycle lanes, paths, routes, and bikeways, as established from time to time by the City Council." An update of the map will reflect changes and improve communication with residents about the City's existing bicycle facilities. Further, the bicycle map is an essential promotional tool to implement bicycle policy.

Fiscal Impact

The project will include minor updates to the bicycle network and the cost of printing the maps annually. The Bicycle Map will have additional minor update every five years, which includes an update to the street network, bicycle facilities, and other elements of the map. The current map will be updated to a GIS based map in FY 2027/28, requiring a major update by the consultant., as well as a revamp of the map layout.

825290 - Pavement Rehabilitation

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for ongoing roadway infrastructure preservation and rehabilitation to maintain Sunnyvale's network in very good condition. Specific yearly projects will be based upon annual roadway condition surveys and pavement management system (PMS) analysis. Projects include milling, wedge-grinding and overlay, cold in-place roadway recycling, crack sealing, street patching and slurry sealing. This effort was supplemented by 828030 - Annual Slurry Seal of City Streets and the Operations budget for roadway maintenance.

This project will continue the shift from typical roadway replacement strategies to a balanced approach between pavement preservation and roadway replacement. These strategies may include: microsurfacing, slurry seals, crack sealing, patch repairs, mill, wedge-grind and overlay, cold in-place or full depth roadway recycling, and other strategies that may become applicable. This overall strategy shift will allow the City to improve a larger roadway area and reach a yearly slurry sealing goal of 6 million sf annually starting in FY 2021/22. By reducing the cycle of resurfacing this will assist us in raising and maintaining the average PCI above 80.

As part of rehabilitating the roadway surface, this project also addresses the following along the identified street segments: concrete replacements, tree removals, traffic signal modifications, and installation of pavement delineation in accordance with the City's latest Active Transportation Plan.

Project Evaluation and Analysis

Maintaining Sunnyvale streets in very good condition is essential to maintain the economic vitality of the City and enhance the quality of life of City residents. The alternative is to delay needed preservation, repairs, and replacement. If delayed, lower cost preservation effort and minor street rehabilitation measures will become major street replacement projects at a much higher cost. This will result in dropping the PCI by 1 to 2 points per year.

Fiscal Impact

The project does not affect the operating budget; however, it will also provide for overtime needed for the warranted preparatory work prior to the application of either double chip seal or slurry seal roadways that will charge to this project. This project also funds any overages charged to Project 828030 - Annual Slurry Seal of City Streets.

Funding Sources

825340 - Street Lights Conduit Replacement

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

The City has an estimated 200 linear miles of conduits and this project provides funding for replacement of damaged conduits, wiring, and other related components throughout the City on an as-needed basis as problems are identified by staff. Additionally, the project will include foundational repairs, so maintenance staff can expedite the reinstall of light poles after knockdowns. Many of the City's streetlights have underground conduits that have been in place for many years and are showing deterioration. Failures are generally the result of tree roots, contractors damaging them, the age of the conduits, or by water intrusion creating electrical shorts.

In FY 2024/25, \$64,000 was used from this project to address safety concerns on Hollenbeck Avenue, Karlstad Drive, and Lawrence Station Road. As a result, staff is evaluating a viable project size for the upcoming project. As of December 2024, this project will replace approximately 1,200 linear feet of conduit in the following locations:
Borregas Avenue and Carl Road
Almanor Avenue between Mary Avenue and Paloma Avenue
DeGuigne Drive between Stewart Drive and Santa Real Avenue
Elm Court and Fair Oaks Avenue
Kifer Road and Uranium Drive
Wolfe Road between El Camino Real (CA-82) and Maria Lane

Design and construction are scheduled to complete in FY 2025/26. Future locations will be based upon damaged locations identified over the next three-year period, except for small spot repairs that can be corrected as identified per the above.

Project Evaluation and Analysis

The alternative to this project would be to not fix broken conduits, which would result in dark streets. Hazardous situations could occur if the conduit breaks in such a way that a street light pole is energized. However, this is not a very common occurrence.

Fiscal Impact

The budget is based upon using either in-house staff on overtime or contractors to repair or replace various damaged conduits. This is a demand driven project that will be regularly updated to reflect pending work warranted that may increase or decrease funding needed.

825530 - Transportation Model Update

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project provides funding for the Transportation Model Update. The City's Transportation Impact Fee is based upon long-range projections of roadway capacity needs from a computerized Transportation Model.

Updating the Transportation Model provides the City with a basis for upholding a fair valuation of the Transportation Impact Fee. This important source of transportation improvement revenue benefits residents, travelers, and developers in the City by allocating a fair share of the cost of transportation system expansion to the land development contributing to the need for the improvements. These improvements will be needed to support the build-out of the land use projections of the General Plan.

In addition, on June 30, 2020, the City Council adopted a new transportation policy to use vehicle miles traveled (VMT) as a threshold of significance for the purposes of analyzing transportation impacts under the California Environmental Quality Act (CEQA). Per the guidance from the Governor's Office of Planning and Research (OPR), a travel demand model should be used to determine the VMT generated by large land development projects or land use growth in Specific Plan/Area Plan, or for new significant transportation improvement projects. Therefore, the City's Travel Demand Model needs to be updated to reflect the existing land use and future land use assumptions and be used as the VMT evaluation tool for large land use projects and significant transportation improvement projects.

Project Evaluation and Analysis

This model needs to be updated on a regular basis to reflect changes in the use of land, the transportation system, and City land use and transportation policy. Updating of the Transportation Impact Fee is required by Government Code 66001. Should the transportation model become outdated, it could subject the City to a challenge and potential loss of the Transportation Impact Fee revenues.

Fiscal Impact

To run the model, consultant services are required every other year. The model would require a major update every seven years to calibrate the model with development projects approved in Sunnyvale and the surrounding agencies, in addition to updates every other year with approved or constructed redevelopment projects within Sunnyvale.

Funding Sources

Capital Projects Fund/Transportation Impact Fee Sub-Fund.

825610 - Fair Oaks Avenue Overhead Bridge Repair

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Matt Brunnings

Project Description/Scope/Purpose

It is essential for the City to rehabilitate the bridge to protect the integrity of the structure, enhance public safety, and provide for enhanced pedestrian and bicycle movement through the project area. This project is the result of the recommendation made in the biannual inspection report by the California Department of Transportation (Caltrans).

Construction started in June 2020. It was substantially complete on 9/16/2022 with the completion of bridge work and opening of Hendy Avenue. Ribbon ceremony was held on 11/9/2022. Plant establishment is projected to be completed by January 2023. The estimated life of the rehabilitated bridge is anticipated to be 40 years.

Project Evaluation and Analysis

Caltrans is required under Title 23 of the Code of Federal regulations to inspect bridges and culverts every two years. This structure was rated "Structurally Deficient" since 2004. This rating was influenced primarily by severe deck cracking and spalling, inadequate sidewalk width, barrier railings, approach railing, and lateral clearance to the columns. Correcting the deficiencies will ensure safety and extend the life of the bridge. It will also be moved off of the Caltrans bridge deficiency list.

Fiscal Impact

A funding application for this project was approved by Caltrans for Highway Bridge Program (HBP) funds. Budgeted funds cover the cost of environmental study, design, right of way acquisition and utility relocation, and construction. Caltrans authorized \$2,941,000 for the project design and \$3,324,505 for appraisals, right of way acquisition and utility relocation work. In August 2019, Caltrans authorized a construction budget of \$17,365,000. In March 2020, Caltrans approved additional Federal funding of \$5,051,995 and it was authorized for construction. In March 2020, the City Council approved Budget Modification No. 25 in the amount of \$465,435 from the Infrastructure fund. In January 2023, Caltrans approved additional funding of \$571,495 for Right-of-Way temporary easement extensions and approved \$920,117 for construction support services. In August 2023, Council approved additional funding of \$677,556 to settle construction claims and to cover for City's 11.5% share of Caltrans additional funds. Grant funding will account for 88.5% of the project cost, with the remaining 11.5% funded by the City's reserves in the Infrastructure Fund.

825730 - Pedestrian Lighted Crosswalk Maintenance and Replacement

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project provides funding for the maintenance and replacement costs of the controller, lights, batteries, solar panels, controller/batteries enclosure, push buttons, flashing beacons, signs, and poles of in pavement-lighted crosswalk warning (IRWL) and Rectangular Rapid Flashing Beacon (RRFB) systems. The City currently operates and maintains 13 IRWL and 15 RRFB systems, these systems have an estimated life cycle of five to six years, based on the City's experience and information from the manufacturers. Funds are budgeted according to the installation date of the various systems. Also, this project will cover the infrastructure replacement for the following:

Project 832920 (East Sunnyvale Area Transportation Improvements) RRFB is every 20 years at a cost of \$150,000 each (2 RRFBs needed). The replacement cycle for RRFBs begins in FY 2042/43 and is every twenty years after.

Project 834490 (Enhanced Crosswalk on California at Pajaro Avenue) RRFB every 20 years at a cost of 74,000 for the entire system. The replacement cycle begins in FY 2043/44 and is every twenty years after. The most recent project was completed in FY 2023/24.

Project 833000 (Sunnyvale SNAIL Neighborhood Improvements – ATP) HAWK system every 20 years at a cost of \$300,000. The replacement cycle begins in FY 2042/43 and is every twenty years after.

Project 833010 (Bicycle and Pedestrian Safety Improvements) RRFB every 20 years at a cost of \$150,000 each (2 RRFBs Needed). The replacement cycle for RRFBs begins FY 2045/46 and is every twenty years after.

Project 833790 (Pedestrian and Bicycle Infrastructure Improvements). The project replacement cycle is every twenty years starting in FY 2042/43 for a cost of \$282,000.

The existing RRFB at Fremont Avenue and Sydney Drive to a HAWK system every 20 years. Design for new HAWK system starts in FY 2024/25 with an estimated cost of \$120,000, replacement of system starts FY 2025/26 with an estimated cost of \$660,000 and is every twenty years each after.

Project Evaluation and Analysis

Pedestrian lighted crosswalk and rectangular rapid flashing beacon systems improve pedestrian safety. These systems require periodic maintenance and replacement in order to remain operational and enhance the safety of pedestrians.

Fiscal Impact

This project will cover the maintenance and replacement costs for existing Pedestrian Lighted Crosswalk systems based on an estimated life cycle. As new systems are added, replacement costs will also be incorporated into this project.

825740 - Battery Backup System for Traffic Signals Maintenance

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project funds the replacement costs of the battery backup systems that have been installed on all the traffic signals in the City. Batteries have between five to six years of life expectancy. The City currently operates and maintains 138 traffic signals. Batteries are replaced over a seven-year period concurrent with the installation of the original devices. Inverters and wiring, separate from batteries, typically last 15-20 years. Replacement of the inverters and wiring is scheduled to start in FY 2024/25 concurrent with installation of original devices.

Project Evaluation and Analysis

Installation of uninterruptible power supplies at traffic signals reduces congestion and improves safety for all users of the City's roadway system during planned and unplanned power outages. If Pacific Gas and Electric (PG&E) power is lost, the traffic signals will continue to function in a normal fashion and motorists will not be required to treat dark signalized intersections as All-Way Stop controlled intersections.

Fiscal Impact

About 20 inverters and wiring of UPS systems and batteries for approximately 25 locations are expected to be replaced every year; however, depending on current market pricing and adjusted for inflation, less than 20 inverters and wiring for UPS systems and batteries for approximately 25 locations could be replaced.

Funding Sources

Gas Tax Fund

826730 - Underground Overhead Utilities

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project is to place overhead utilities underground along various arterials per the City's undergrounding districts. Funding shown is the City's share of support in order to qualify for Pacific Gas and Electric's (PG&E) Rule 20A funds. Under the Rule 20A program, the City is responsible for participating in the joint trenching of the City's street lights and for connecting and installing new street lights to replace those formerly on wood utility poles. The City funds include those costs plus engineering costs related to the district formation and Rule 20A projects.

In 2009, City Council approved prioritizing criteria (to match Rule 20A requirements) and developed a priority list of streets for undergrounding. The work along Fair Oaks Avenue between Evelyn Avenue and El Camino Real has been completed. Design by PG&E for the Wolfe Road project started in 2014. The Wolfe Road project has been divided into two phases. The construction of Phase 1 of Wolfe Road between Homestead Road and Fremont Road stated in July 2022 and was completed in summer 2024. Phase 2 of design is on hold.

PG&E ceased allocating new Rule 20A work credits to public agencies as of December 31, 2022. As of December 31, 2023, the City's work credit balance was \$12,344,685. Current construction cost for Wolfe Rd Phase 1 will leave an estimated balance of \$3 million. The estimated cost for the design and construction of Wolfe Rd. Phase 2 is \$5.1 million.

Project Evaluation and Analysis

Each year PG&E allocates work credit that relates to dollars to share with cities in the undergrounding of their facilities. The Rule 20A funds can only be used by the Rule 20A project within the related Underground Utility District. Pursuant to California Public Utilities Commission Decision 21-06-013, "Electric utilities shall not allocate new Rule 20A work credits after December 31, 2022." Therefore, 2022 is the last year for work credit allocations.

As of March 2023, the City's Rule 20A Work Credit account balance is \$12,344,685.

Fiscal Impact

The total cost estimate for Wolfe Road Phase 1 and Phase 2 is \$12.39M, including use of PG&E credits. Budget shown is the City's share of support per the agreements with PG&E. The City is responsible for a joint trench for the City's street lights and the new street lights installation, and other related costs to form the underground district.

There will be no impact to the operating budget.

828030 - Annual Slurry Seal of City Streets

Originating Year:	2009	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

Slurry seal is a maintenance treatment utilized by the City that extends the life of a road surface. Slurry seal is cost effective to prolong the life of streets which have not degraded to the point of needing overlay or reconstruction. Slurry seal is most effective when used to extend the life of pavement that is already in good to very good condition.

This project covers staff overtime hours as well as contract construction costs of slurry sealing a portion of the City's streets each year. Corrective maintenance work, such as patching, chip seal or crack seal, as well as project administration and field management of the project, is generally completed by the City through contract or Street Operations. The pavement condition survey, as well as annual field inspections are used to determine which streets will most benefit from a slurry seal.

Slurry seal is most effective in protecting and extending the life of a pavement surface when applied on a regular cycle, normally every 7 to 10 years. The amount included in the budget will allow for approximately 5.0 million square feet of slurry seal annually. For FY 2024/25, this project will slurry seal 3.8 million square feet of pavement. This reduced quantity will help staff realign the construction schedule with a late-spring timeframe, which is when the City receives the most competitive bids.

Project Evaluation and Analysis

Slurry seal is a maintenance treatment that extends the life of a road surface. Without slurry seal, streets will require expensive asphalt overlay on a more frequent basis, or streets will deteriorate.

Fiscal Impact

This project was funded by General Fund and is funded by the Measure B Fund starting FY 2019/20 and going forward. All overages have been and will continue to be charged to Project 825290 - Pavement Rehabilitation - VTA Measure B.

Funding Sources

829260 - Mary Avenue Extension

Originating Year:	2010	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2038/29	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

This project will complete the design, right of way, and construction phases of the extension of Mary Avenue from Almanor Avenue to 11th Avenue over Routes 101 and 237. The project provides necessary roadway capacity to support the development envisioned in the Moffett Park Specific Plan.

The funds in FY 2024/25 are expected to be used as the City's local match for grant funding.

Project Evaluation and Analysis

Mary Avenue extension is identified for traffic improvement in the General Plan and included in the City's Transportation Strategic Plan. It is also listed in the Valley Transportation Plan (VTP) 2040, the long-range vision for transportation in Santa Clara County. The City is currently preparing the environmental document, and it will be circulated and brought before Council for consideration per the requirements of the California Environmental Quality Act.

Fiscal Impact

This project sets aside \$4.1 million of Transportation Impact Fee funding for the City's anticipated local match for potential grant funds. Design and construction are unfunded and estimated at \$30 million for design and \$163 million for construction. The project assumes a minimum 50% funding from Transportation Impact Fees/local match and the remainder from outside sources, such as grant funding, bonds, and/or low interest loans. Staff will program additional funding during future CIP Cycle when other funding sources are identified.

Funding for the environmental review is in Project 832440 - Mary Avenue Overcrossing Environmental Impact Report.

Funding Sources

Capital Projects/Transportation Impact Fee Subfund

829400 - Sidewalk, Curb and Gutter Replacement

Originating Year:	2012	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

This project provides annual funding for replacing damaged or raised sidewalks, curbs, and gutters throughout the City. Typical work includes design, verifying repair locations, tree removal, and replacement if needed, bidding and contracting, inspection, and project closeout.

To address the growing backlog of sidewalk maintenance, City staff launched a pilot program for FY24/25 to evaluate 2,600 locations in the current replacement list. A contractor will inspect these sidewalks, perform concrete shaving to eliminate tripping hazards at select locations, and collect data to prioritize repairs (RTC 24-1138). This program will help staff streamline projects and improve the efficiency of sidewalk maintenance. The pilot is expected to be completed by Fall 2025, providing valuable insights into how mitigation methods like concrete shaving can reduce the backlog.

Project Evaluation and Analysis

Demand for sidewalk replacement work has grown significantly due to tree roots damaging sidewalks, curbs, gutters, and aprons. The replacement list currently includes approximately 4,700 pending repairs. This backlog of damaged sidewalks is a major source of resident complaints and presents critical challenges for the City, including increased liability, accessibility barriers, and reduced neighborhood appeal. Damaged sidewalks hinder the City's commitment to maintaining a multi-modal transportation network as outlined in the General Plan.

Fiscal Impact

This project is funded by the 2016 VTA Measure B Fund.

Funding Sources

General Fund, 2016 Measure B - Santa Clara VTA Fund

830640 - Stevens Creek Trail Extension (Dale/Heatherstone to Remington)

Originating Year:	2008	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

In 2015, the cities of Mountain View, Cupertino, Los Altos and Sunnyvale prepared the Stevens Creek Feasibility Study to identify the options for alignment, type of access, feasibility, costs, and timing for a trail to connect the existing segments of the Stevens Creek Trail in Cupertino and Mountain View.

In August 2019, the City of Mountain View sent a letter requesting to partner with the City of Sunnyvale to further develop the Stevens Creek Trail extension through construction of a connection from the Dale/Heatherstone Bridge to Remington Avenue, which also included a pedestrian/bicycle overcrossing over SR 85 to connect to Mountain View High School. Mountain View proposed that the two cities explore the multi-jurisdictional opportunity to partner for the application for a grant fund for this project through the 2016 VTA Measure B Bicycle and Pedestrian Competitive Grant Program.

In 2020, the City of Mountain View, with the support of Sunnyvale, took a lead in applying for the Measure B grant for the segment of the extension and was awarded \$4,800,000 in grant funding for the environmental clearance and design phases. Both cities will each provide a matching fund of \$600,000. This project will be led by City of Mountain View. Once the design phase is completed, the two cities will look for grant funding opportunities for the construction phase of the project.

Project Evaluation and Analysis

The trail extension would expand the catchment of this regional trail to neighborhoods and destinations further south in Sunnyvale, Mountain View and Los Altos. It would be located on publicly owned open space that is currently inaccessible.

Fiscal Impact

The current funds of \$776,868 are set aside for Sunnyvale's local match (per RTC 19-1132) for the 2016 Measure B Grant related to environmental and design phases. Staff will partner with the City of Mountain View to look for grant funding for the construction phase and is assuming a \$600,000 matching fund construction cost as a placeholder in FY 2026/27. The City's local match is funded with Transportation Impact fees.

831580 - ADA Projects and Emergency Concrete Replacement

Originating Year:	2016	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project is intended to provide annual funding for emergency replacement of damaged sidewalks, curbs, and gutters, and non-compliant Americans with Disabilities Act (ADA) locations that warrant immediate attention. The scope of work includes immediate mitigation done by city staff, design, verification of locations to be repaired or replaced, tree removals and replacements if warranted, bidding and contracting the work, inspection, and closeout.

Project Evaluation and Analysis

Complaints about unsafe concrete conditions increased during the past few years. Locations of concerns were placed on a priority list until a sidewalk repair project went out to bid thus delaying immediate addressing of these concerns. This project provides for emergency mitigation by city staff to address the safety concerns and identify tree removals and replacement. These locations will then be placed on the next scheduled concrete replacement project. This will allow for more locations to be addressed at a lower cost. Project funds will be used for sidewalk replacements as needed.

The alternative to this project would be not to fix the areas of concern until the annual sidewalk repair capital project is put out to bid.

Fiscal Impact

This project is funded by the General Fund and is intended to be available for urgent repairs. This project supplements sidewalk funding in Project 829400 - Sidewalk, Curb and Gutter Replacement.

Funding Sources

General Fund

831590 - Intelligent Transportation Systems

Originating Year:	2016	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project is to provide implementation of improvements identified through the comprehensive Intelligent Transportation System (ITS) architecture master plan, software and hardware needed for the buildout of the ITS network utilizing fiber optics technology with the ultimate goal to integrate all of the traffic signals and ITS components into the City's Centralized Advanced Traffic Management System.

Deployment of the ITS architecture includes the traffic signal communications network and priorities as well as details for devices and software needed to be procured for implementation through advance traffic signal management systems (advance dilemma zone, pedestrian adaptive systems, etc.) along key corridors for which traffic signal and device communications are critical to maintaining smooth traffic patterns on a real time network. Communications would be centralized within the City's Traffic Management Center (TMC), allowing staff to view and control traffic patterns as necessary. The master plan will identify future construction costs and priority of implementation.

Project Evaluation and Analysis

A communication network is the first step in looking and planning for the future of traffic signal/device communications. Upgrading and providing new traffic communications via fiber optic technology allows for expansion of the system to incorporate technology that is currently not being utilized, such as live video feed from each intersection, remote control of the speed radar signs, live travel time systems, real time speed management systems, real time traffic data and vehicle classification systems, passage and delay time managements, remote trouble shooting capabilities, and inclusion of permanently mounted changeable message signs.

Fiscal Impact

The project has the potential for creating opportunities for efficiencies. Allowing for full communications of traffic devices back to the City's TMC allows staff to control and modify signal/traffic patterns and save time spent in the field. In addition, multiple intersections can be monitored at one time from one location. The Master Plan's budget identified various phases for the implementation of fiber optics communications infrastructure, however, project costs are based on bid history and construction prices received. The complete build out may require additional funding, especially for the fiber optics network.

On September 26, 2023 (RTC 23-0787), the City Council accepted \$158,000 from 2010 Measure B Vehicle Registrations Fee Countywide Program funds (Cycle 3) for the implementation of transit signal priority equipment and other programmatic needs.

831770 - Illuminated Street Sign Replacement Project

Originating Year:	2016	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

The City maintains 319 internally illuminated street name signs. The existing signs are lit by fluorescent tubes and are usually replaced on a five-year cycle. These are obsolete and therefore no longer available for replacement. As the street name signs fail, they will now be replaced with high intensity retroreflective signs. Life expectancy of these new signs is about 15 years. The new static street name signs will not require electricity to operate and are more environmentally friendly. The replacement signs will reflect light from oncoming vehicular traffic and from existing safety lights for visibility by roadway users.

Project Evaluation and Analysis

The current street signs are obsolete and require replacement. The project will allow for replacement as part of the standard maintenance cycle.

Fiscal Impact

This project is funded by the General Fund. The cost per unit, including installation, is approximately \$1,000; however, this estimate is subject to increase due to construction cost increases over the past few years. This change will result in some PG&E electricity and maintenance repair cost savings that will be incorporated into the Department's FY 2026/27 operating budget based on actual savings in PG&E invoices.

Funding Sources

General Fund

831870 - Preventive Maintenance for Various Bridges

Originating Year:	2016	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides funding to perform preventive maintenance repairs and surface treatment to various bridges in Sunnyvale. Caltrans inspects the City's bridges and overcrossings every two years and creates bridge inspection reports that include maintenances recommendations to be performed by the City. Bridges not inspected by Caltrans have been inspected independently by the City.

The current project is federally funded through Caltrans Bridge Preventive Maintenance Program (BPMP) and proposed to treat the bridge deck with methacrylate sealing, polyester concrete overlay, or the combination of both. Total of five bridges are selected, including Tasman Drive over Calabazas Creek, Arques Avenue over Calabazas Creek, Mathilda Avenue at Evelyn Avenue, Kifer Road over Calabazas Creek, and Lochinvar Avenue over Calabazas Creek. Three out of the five bridges are shared with the City of Santa Clara. Design and construction cost of the shared bridges will be split between the City of Sunnyvale and City of Santa Clara through cost share agreement.

Project Evaluation and Analysis

This project will complete work recommended by Caltrans bridge inspectors to avoid safety issues and improve the function and reliability of the City's bridges.

Fiscal Impact

The bridges identified for repair under this project are not eligible for Highway Bridge Project grant funds and will be funded by the Gas Tax fund.

Funding Sources

Gas Tax Fund; Caltrans Bridge Preventive maintenance Program.

832000 - East and West Channel Trail Construction

Originating Year:	2017	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

This project is to provide trails along the Sunnyvale East and West Channels via installation of paving on the Santa Clara Valley Water District's maintenance road. Approximately 1.7 new miles of trails will be constructed. The West Channel trail will extend from Caribbean Drive to Mathilda Avenue, and the East Channel trail will extend from Caribbean Drive to Moffett Park Drive. Valley water is moving ahead with the West Channel improvement first.

Valley Water is the lead on this project. The project funds are for Sunnyvale's reimbursement requirements to Valley Water.

As of November 2024, regulatory permitting for Valley Water's flood control project will be obtained in summer 2025 and the project will bid in late 2025 or early 2026.

Project Evaluation and Analysis

The trails are currently being designed as part of the Santa Clara Water District (District) Sunnyvale East and West Channel Flood Protection Project. The City and District have worked as partners in developing a project and cost sharing agreement that will provide flood protection and trail amenities to Sunnyvale residents and is equitable to both agencies. On August 25, 2015, the City Council authorized the City Manager to enter into a Joint Use Agreement with the Santa Clara Valley Water District for maintenance of the trail.

Fiscal Impact

The City and the Water District have entered into a funding agreement (RTC 15-0948, 11/17/2015), which obligates the City to pay up to \$500,000 to cover the cost of the paving work.

832160 - Engineering Services for Transportation Related Projects/Priorities

Originating Year:	2017	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

In 2016, the City entered an agreement with a developer in which the developer will reimburse the City \$440,000 a year for a three-year period. In 2019, the City extended the agreement for an additional four (4) years utilizing the balance of approximately \$440,000 (FY 2019/20) and in the amount of \$440,000 per year, for three years: FY 2020/21 through FY 2022/23. Due to vacancies earlier in the project, there is still budget for a term-limited position.

This funding was used for the staffing of two term-limited positions which are needed to accelerate work on transportation related priorities identified by the City. The two positions have been assigned to the Transportation and Traffic Division to provide the management and technical resources needed to help facilitate a number of transportation priorities including but not limited to:

- Bike projects implementation
- Bernardo Avenue Undercrossing
- Caltrain Grade Separations at Mary Avenue and Sunnyvale Avenue
- Mary Avenue Extension
- Stevens Creek Trail Extension

One position was converted into a permanent position covered within the operations budget after the two (2) year term. The other position remains as term- limited and will be extended to expend the remainder of these funds.

Project Evaluation and Analysis

The handling of current and future transportation projects will require significant staffing resources to conduct engineering review, analysis, and implementation that will impact the City's ability to respond to other requests for services and maintain established service levels. The developer has provided funds that will continue to fund one (1) Transportation Engineer needed to assist with implementation of identified City projects.

Fiscal Impact

Funding for the Transportation Engineer will continue to be paid for by the funds provided by the developer through an agreement between the City and the developer, approved by Council on June 25, 2019 with RTC 19-0625.

832440 - Mary Avenue Overcrossing Environmental Impact Report

Originating Year:	2017	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

The project will complete the Environmental Impact Report (EIR) for the extension of Mary Avenue overcrossing from Almanor Avenue to 11th Avenue and over Routes 101 and 237. The extension will be an overcrossing which will span over Routes 101 and 237 and Moffett Park Drive. The project provides multi-modal connectivity and capacity to support development envisioned in the Moffett Park Specific Plan. The project will complete traffic analyses and environmental impact reviews associated with four project options including:

- A four-lane Mary Avenue with protected bicycle facilities and sidewalks
- A two-lane Mary Avenue with protected bicycle facilities and sidewalks
- A two-lane Mary Avenue for transit, shuttle and high-occupancy vehicles with protected bicycle facilities and sidewalks
- A bicycle and pedestrian overcrossing
- No Project - Removal of the Mary Avenue overcrossing from the General Plan

Project Evaluation and Analysis

Mary Avenue extension is identified for traffic improvement in the General Plan and included in the City's Transportation Strategic Plan. It is also listed in the Valley Transportation Plan (VTP) 2040, the long-range vision for transportation in Santa Clara County.

Fiscal Impact

The environmental review phase of the Mary Avenue Overcrossing project is funded using Traffic Impact Fees (TIF) Sub-Fund of the Capital Projects Fund. Funding for design and construction phases will be budgeted in Project 829260 - Mary Avenue Extension.

Funding Sources

Capital Projects Fund/Transportation Impact Fees Sub-Fund

Plans and Goals

LT - Land Use and Transportation - LT-2: Environmentally Sustainable Land Use & Transportation Planning and Development

832910 - Bernardo Avenue Bicycle Undercrossing Environmental Analysis

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

The Bernardo Avenue Undercrossing environmental analysis project will provide environmental clearance to allow the undercrossing to be built at a later date. The undercrossing will provide a bicycle and pedestrian connection on Bernardo Avenue near Evelyn Avenue and Central Expressway under the Caltrain Railroad tracks and Central Expressway. The undercrossing will be important for bicycle and pedestrian circulation as there are few opportunities for bicyclists and pedestrians to cross the Caltrain tracks at a safe location in the western part of the City. The undercrossing will also provide a viable connection to the northern part of the City where there are many employers and high-density residential developments. This project is a partnership with the City of Mountain View.

On August 13, 2024, City Council selected the Eastern Option as the Locally Preferred Alternative. CEQA environmental clearance was certified in 2024 and NEPA is expected in early 2025. Caltrain's environmental documentation remains to be completed and is expected in early 2026.

Project Evaluation and Analysis

There are no viable alternatives for this project as the railroad presents a physical barrier to bicycle and pedestrian travel in this section of the City. During construction, there may be slight impacts to vehicle, bicycle, and pedestrian travel at the adjacent roadways and some disruption to Caltrain operations. However, after completion, the undercrossing will improve all travel modes.

Fiscal Impact

This project is funded with a reimbursement from the City of Mountain View and the City's portion will be covered by Transportation Impact Fees (TIF).

Funding Sources

Reimbursement of \$521,783 from the City of Mountain View in the Capital Projects/General Assets Sub-Fund and \$643,286 from the Capital Project Fund/Transportation Impact Fee Sub-Fund

832920 - East Sunnyvale Area Transportation Improvements

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Matt Brunnings

Project Description/Scope/Purpose

The East Sunnyvale Area Transportation Improvements project includes improvements in the East Sunnyvale Area Sense of Place (south of Highway 101 and west of Lawrence Expressway). All improvements are located in the East Sunnyvale Area as defined in the plan and include bicycle lanes and enhancements, transit stop upgrades, crosswalk installation and enhancements, Americans with Disabilities Act (ADA) compliant curb ramps, reduced curb radii at intersections, and bike box signal modifications. The project is necessary to advance the goals of the East Sunnyvale Area Sense of Place Plan and will encourage re-development as described in the plan. Many of the improvements included will require routine maintenance. This project further provides the transportation upgrades listed in the plan for a synergistic transportation system for the area.

The costs for the replacement cycles are in Project 825730 - Pedestrian Lighted Crosswalk Maintenance and Replacement.

Project Evaluation and Analysis

The East Sunnyvale Area Sense of Place plan provides transportation improvement guidelines for the project area. After completion of the improvements, all travel modes are expected to improve.

Fiscal Impact

This project is funded by Santa Clara Valley Transportation Authority One Bay Area Grant-Cycle 2 (OBAG2) grant funds and a local match from Capital Projects Fund/Transportation Impact Fees Sub-Fund. \$3,047,425 was secured with OBAG2 grant funds with a local match of \$810,075 (21%). The final schedule could change based on availability and programming of grant funding. Future replacement costs are included in Project 825730 - Pedestrian Lighted Crosswalk Maintenance and Replacement.

Funding Sources

OBAG2 Grant in the Capital Projects/General Assets Sub-Fund; Capital Projects Fund/Transportation Impact Fees Sub-Fund

832970 - Peery Park Area Transportation Improvements

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The project scope has narrowed and includes new sidewalks, Americans with Disabilities Act (ADA) compliant curb ramps, and improvements to streetlighting, landscaping and street improvements in the Peery Park Specific Plan for Potrero Avenue between Central Expressway and Maude Avenue. Since the plan has been recently adopted, a few improvements have been installed. However, new developments in the area will include improvements in compliance with the plan. This project will further provide the transportation upgrades listed in the plan for a synergistic transportation system in the plan area. Bike lanes will be installed with buffers where possible and also have colored pavement at conflict areas. Transit stops will be upgraded to provide more amenities for existing transit users and attract new transit riders. Sidewalks will be installed on two main corridors in the area to provide a safer location for pedestrians to walk. Curb ramps and traffic signals will be upgraded to ADA standards and facilitate safe and efficient movement of all modes of transportation.

The project design will be completed in mid-2023. Construction in underway and will be completed in FY 2025/26.

Project Evaluation and Analysis

The project is necessary to achieve the multi-modal transportation goals of the Peery Park Sense of Place Plan and will encourage re-development as described in the plan. The main goal of the project is to provide a transportation system that can safely handle circulation for all users including vehicles, bikes, pedestrians, and transit. The project incorporates multiple complete street design elements.

Fiscal Impact

This project is funded by a Santa Clara Valley Transportation Authority One Bay Area Grant-Cycle2 (OBAG2) grant of \$3,480,000 and a local match from the General Fund of \$714,000 (21%). The final schedule could change based on availability and programming of grant funding. Many of the improvements included will require routine maintenance. The operating Impacts will be for annual maintenance of \$3,360 per year starting in FY 25/26 for new street lights.

Maintenance of the following should occur every five (5) years: bike lanes repainting, new/updated intelligent transportation systems (ITS) equipment at intersections to meet ADA requirements, and maintenance of high visibility crosswalks. The need for maintenance is anticipated to begin in FY 2025/26, occurring every five years, and will be absorbed in the Department's operating budget.

Funding Sources

OBAG2 Grant in the Capital Project/General Assets Subfund; General Fund

832990 - Sunnyvale Traffic Signal Upgrades

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The project will fully or partially upgrade up to five traffic signals in the City that have become obsolete and are not economical to maintain. These intersections listed in order of priority include 1) Hollenbeck Avenue and Danforth Drive, 2) Sunnyvale-Saratoga road and Alberta Avenue/Harwick Way, 3) Mary Avenue and The Dalles Avenue, 4) Sunnyvale Avenue and California Avenue, and 5) Mary Avenue and Maude Avenue. The upgraded traffic signals will have Americans with Disabilities Act (ADA) pedestrian friendly design and improved bicycle detection systems. Consideration will also be given to the installation of advanced dilemma zone detection systems. The number of upgraded intersections listed above could change based on grant funding budget available.

Project Evaluation and Analysis

Upon completion, this project will improve the traffic flow and the intersections will provide a much safer environment for all roadway users. The project design for the five intersections started in October 2018 and was completed in 2022. The construction for the first three intersections per the authorized construction grant started August 2022 and was completed in November 2024. The construction took longer due to long lead procurement time of the traffic poles. The project will be completed in FY 2024/25.

Fiscal Impact

This project is funded by \$2,566,000 Santa Clara Valley Transportation Authority One Bay Area Grant-Cycle 2 (OBAG2), a local match of \$494,600 from the General Fund, and \$163,000 from the Gas Tax Fund.

833000 - Sunnyvale SNAIL Neighborhood Improvements - ATP

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

In 2016, Sunnyvale was awarded an Active Transportation Program (ATP) grant in the amount of \$4,847,000 for the environmental, design, and construction phases for implementing Active Transportation Improvements in the Sunnyvale's Sunnyvale Neighbors of Arbor including La Linda (SNAIL) and San Miguel neighborhoods. The original scope focused on improvements that are on the perimeters of Sunnyvale's SNAIL and San Miguel neighborhoods and intended to improve safety and expand connectivity to nearby schools and other destinations. However, after engaging with the community, and performing various studies, the City decided to prioritize providing active transportation improvements closer to the schools.

In March 2020, City submitted a Request of Scope Change to the Metropolitan Transportation Commission (MTC), Caltrans and California Transportation Commission (CTC) to revise the scope to include improvements in the immediate vicinity of the two schools. The City believes that these improvements would benefit more active transportation users. The request was reviewed and approved by CTC at its December 2020 meeting. The revised project will install curb extensions, high visibility crosswalks, advance yield markings, raised crosswalks, speed feedback signs and HAWK (High-Intensity Activated crosswalk) beacons, upgrade a school path to current standards, enhance existing bike lanes, and create new bike routes within SNAIL and San Miguel neighborhoods. D Design was completed in FY 2022/23, and construction began FY 2023/24 and is substantially completed. Project completion expected in FY 2024/25 once PG& E provides service for the final traffic signal.

Project Evaluation and Analysis

In spring 2019, the City conducted outreach to Columbia Middle and San Miguel Elementary School as part of an effort to develop the Safe Routes to School chapter of the City's Active Transportation Plan. As part of the outreach efforts, the City learned that implementing improvements within the immediate vicinity of the two schools will benefit a larger number of active transportation users, especially on routes to and from schools.

Fiscal Impact

The total project cost for the environmental, design and construction phases is \$6,059,000, of which \$4,847,000 is from grant funds and with a local match of \$1,212,000 from the Capital Projects Fund/Transportation Impact Fees Sub-Fund. Operating and maintenance budget of \$7,200 annually (speed radar signs and electricity costs) is required to operate the HAWK beacons, speed feedback signs, and raised crosswalks once construction is completed.

The green bike maintenance replacement costs are in project 834700 starting in FY 2029/30.

Funding Sources

833010 - Bicycle and Pedestrian Safety Improvements

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

The project will implement bike and pedestrian improvements at selected locations throughout the City in accordance with the City's Active Transportation Plan (ATP), which was adopted in 2020. The project will install improvements such as bicycle facilities, crosswalks, quick build safety projects, green bike lanes, bike boxes, curb extensions and ADA compliant curb ramps throughout the City. The project will deploy these improvements to improve bike and pedestrian safety.

These funds may also be used to leverage the grant funds.

Project Evaluation and Analysis

This project will provide a safer environment for bikes and pedestrians, and will encourage biking and walking throughout the City. The project will also contribute to the Safe Routes to School network in the City, which will encourage more students to walk or bike to the school.

Fiscal Impact

This project is funded by Capital Projects Fund/Transportation Impact Fee (TIF) Sub-Fund, where a portion of the TIF is collected to implement pedestrian facility improvements and bicycle network improvements. This project may be used as local matching fund for upcoming grant opportunities for bicycle and pedestrian improvements.

Funding Sources

Capital Projects/Transportation Impact Fees Sub-Fund

833020 - Future Traffic Signal Construction (3111)

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project provides funding for traffic signal construction and modification. This project involves installing new traffic signals and traffic signal communications.

The current project budget was used for the remaining construction cost for the signal at Wolfe Road (Project 816000) and Dartshire Way. Currently, no new locations for traffic signal construction and modification are identified.

Project Evaluation and Analysis

This project allows the City to respond more quickly and efficiently to address the traffic signal needs, and safety concerns. The locations of these signal improvements are often determined by safety and operational analysis of the intersections, community input or by changes in traffic conditions.

Fiscal Impact

This project is funded by the Capital Projects Fund/Transportation Impact Fees Sub-Fund. The funding assumes one new traffic signal being installed every five years. This work may be constructed by developers and reimbursed by the City.

Funding Sources

Capital Projects Fund/Transportation Impact Fee Sub-Fund

833030 - Pavement Standards

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Connie Phan

Project Description/Scope/Purpose

This project provides for hiring a consultant to prepare standard City design guidelines for use in future Capital Improvement Projects (CIP) and land development pavement rehabilitation projects. Design will be completed in FY 2022/23.

Project Evaluation and Analysis

The City currently does not have a guidance document for pavement rehabilitation. Design guidelines will cover the various types of pavement rehabilitation/restoration techniques and provide guidance for when these techniques are utilized. Similar guidance documents have been developed for sanitary sewer, storm sewer, and potable water design.

Fiscal Impact

This project is funded by the General Fund. No additional funding is required to complete this scope of work.

Funding Sources

General Fund

833810 - Traffic Signal Maintenance Services Augmentation

Originating Year:	2019	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project provides additional funding for the traffic signal maintenance contract for services due to unexpected levels of emergency vehicle collision repairs and equipment failure. These non-routine services are time-sensitive and must be performed immediately upon occurrence to ensure safety of vehicular and non-vehicular traffic.

Project Evaluation and Analysis

The Department of Public Works Division of Transportation and Traffic is experiencing an elevated level of demand for non-routine traffic signal services to repair or replace malfunctioning or damaged traffic signals due to equipment failure, vehicular collisions, vandalism, and weather events. Equipment failures can occur due to the age of the traffic signal infrastructure. These non-routine services are time-sensitive and must be performed immediately upon occurrence to ensure safety of vehicular and non-vehicular traffic.

Fiscal Impact

This project provides for emergency services. This project may need additional funds for future years to repair City property due to vehicle collisions and failure. The City may receive restitution from third parties to offset expenditures associated with damage to City property.

Funding Sources

General Fund

833850 - Sunnyvale Safe Routes to School Improvements

Originating Year:	2019	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The project will install bike lanes and high visibility crosswalks on Sunnyvale Avenue in the vicinity of Bishop Elementary School. New Bike lanes on Sunnyvale Avenue between Maude and Evelyn Avenue will improve safety, and will connect surrounding neighborhoods to Bishop Elementary School and to other destinations like Fair Oaks Park, King's Academy (Private School) and the commercial corridor on Mathilda Avenue.

The project will remove slip lanes at the intersections of Mathilda Avenue/Maude Ave and at Maude Avenue/Borregas Avenue to eliminate conflicts and reduce crossing distances, upgrading traffic signals and installing Americans with Disabilities Act (ADA) compliant pedestrian signals, infrared bike detection systems, green bike box, and high visibility crosswalks.

The project phase 1 environmental documentation and traffic/parking study was completed in August 2020. The project phase 2 design was completed June 2022. Construction completed in FY 2024/25.

Project Evaluation and Analysis

Nine pedestrian and bicycle collisions in the past five years have been documented on nearby routes to Bishop Elementary, a school in north-central Sunnyvale. To improve safety, the new facilities and improvements will connect surrounding neighborhoods to Bishop Elementary School and other destinations like Fair Oaks Park, King's Academy (Private School) and the commercial corridor on Mathilda Avenue, and will remove barriers at the intersections for those who would like to bike and walk to and from the school. The project will encourage more walking and biking in the neighborhood, especially to and from the schools.

Fiscal Impact

The project is funded by Active Transportation Program (ATP) Grant Funds for up to \$1,889,000 and requires a local match of \$473,000. The local match will come from Capital Projects Fund/Transportation Impact Fees Sub-Fund. FY 2022/23 Budget Modification No. 9 increased the budget by \$1,207,428 with \$406,121 in Transportation Impact Fee funds and \$801,307 in Gas Tax funds.

Funding Sources

Active Transportation Program (ATP) Grant in the Capital Projects/General Assets Sub-Fund, Capital Projects Fund/Transportation Impact Fees Sub-Fund, Gas Tax Fund

834370 - Traffic Sign Installation and Maintenance

Originating Year:	2019	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project provides funding to address community requests for the installation, or upgrade of all traffic signs to meet the current CA MUTCD within the City's jurisdiction. The funds may also be used for curb painting and installation of limit lines and advance pavement warnings. These project funds will also provide the ability to plan for and prioritize signing, curb painting and other projects per community requests. The project will be used to install Stage 1 traffic calming measures as well, which will allow the City to be more responsive to the public's requests for neighborhood traffic calming if warranted.

The work for this project will begin in FY 2025/26, and be programmed every five years through the 20-year budget.

Project Evaluation and Analysis

The City receives approximately 400 resident requests per year that involve the installation of signs or curb painting. Requests are typically in regard to traffic calming, parking regulations, speed limits, intersection sight visibility, stop or yield signs, and crosswalk markings and warning signs. Staff evaluates each request through federal, state, and local standards and guidelines to determine which requests are valid. After each request is evaluated, most requests do not qualify for treatments. However, the City still has approximately 50 requests that need to be implemented per year. Without funding, these requests are queued on a waitlist until funding becomes available. The project will enhance safety for all users of the road and will enable staff to address the safety concerns raised by the community quickly.

Fiscal Impact

This project is funded by General Funds. Staff will monitor maintenance activities for this project and adjust funding for replacement cycles as needed.

Funding Sources

General Fund

834550 - Speed Feedback Signs Maintenance and Replacement

Originating Year:	2019	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

This project provides funding for the maintenance and replacement for the City's traffic control signs: solar panels, radars, light emitting diode (LED) modules, batteries, and controller boards of all VCalm Radar speed feedback signs.

The City currently operates and maintains 53 VCalm signs. These systems have an estimated life cycle of six years to ten years based on the City's experience and information from the manufacturers. In FY 2019/20, staff completed a study to assess the benefit these systems provide to the community and ascertain the appropriate maintenance and replacement cycle. It was determined that the replacement schedule is every 10 years. Funds in FY 2030/31 are for sign replacement. The next cycle is in FY 2040/41 and will be assessed in the next CIP Cycle.

Project Evaluation and Analysis

Speed feedback radar signs systems help to improve pedestrian safety. These systems require periodic maintenance and replacement in order to remain operational. The study will determine the appropriate level of maintenance and replacement cycle.

Fiscal Impact

This project is funded by the Gas Tax Fund.

Funding Sources

Gas Tax Fund

834700 - Green Bike Lane Replacement

Originating Year:	2019	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Sean Smith

Project Description/Scope/Purpose

The City has increased the amount of green bike lane markings. It is necessary to maintain the markings to keep a high level of visibility. The project will allow for the repair/replace of existing green bike lane markings as needed. Maintenance will be required every five years.

This project will also replace green bike lanes for the following projects:
832930 - Fair Oaks Ave. Bike Lanes (FY 2027/28, 2032/33, FY 2037/38, and FY 2042/43) - \$80,000 every five years.
832950 - Java Road Bike Lanes (FY 2028/29, FY 2033/34, FY 2038/39) - \$40,000 every five years.
832960 - Lawrence Station Area Bike Lanes (FY 2027/28, 2032/33, 2037/3/, 2042/43) - \$40,000 every five years.
833000 - Sunnyvale SNAIL Improvements ATP (FY 2029/30, 2034/35, 2039/40) - \$40,000 every five years.

Project Evaluation and Analysis

The City has been adding green bike lane markings. This project will cover the ongoing repairing or replacing of the damaged or weathered traffic markings to ensure the high level of visibility needed for optimal road safety.

Fiscal Impact

The project is funded through the General Fund and the 2016 Measure B - Santa Clara VTA Fund. As the City continues to add green bike lanes, staff will monitor the warranted work, lifecycle, and material/labor costs to increase/decrease project funding as may be needed.

Funding Sources

835000 - Pedestrian & Bicycle Safety Improvements at Fremont Ave. & Manet Drive/Bobwhite Ave.

Originating Year:	2020	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

The City received Transportation Development Act (TDA) grant funds in FY 2019/20 and FY 2020/21 in the amounts of \$172,712 and \$184,876, respectively, for a bicycle and pedestrian improvement project (Project). The funds are identified for use in the design and implementation of Pedestrian and Bicycle Safety Improvements at the intersection of Fremont Avenue and Manet Drive/Bobwhite Avenue. The project scope includes:

- Curb extension on the northwest corner with bi-directional ADA compliant curb ramps.
- Installation of high visibility crosswalks.
- Installation of accessible pedestrian push buttons.
- Replace 8" vehicle signal heads with 12" vehicle signal heads to improve visibility.

Project Evaluation and Analysis

TDA Article 3 is a source of funds created by State legislation and processed through the Santa Clara Valley Transportation Authority (VTA) and Metropolitan Transportation Commission (MTC) that annually returns sales tax revenues to local agencies earmarked for bicycle and pedestrian projects. The project has been reviewed and recommended by Bicycle and Pedestrian Advisory Committee (BPAC), and the implementation of the project would address pedestrian and bicycle safety concerns.

Fiscal Impact

Transportation Development Act (TDA) Article 3 funds will cover the majority of the project costs. Council approved FY 2022/23 Budget Modification No. 2 to add \$60,000 in Gas Tax funds to fully fund construction of this project. The City also collected \$8,000 in Transportation Impact Fee funds from the developer of the 581 Fremont Avenue project as their fair share contribution to improvements at this intersection, bringing the total amount available for Project 835000 - Pedestrian & Bicycle Safety Improvements at Fremont Ave. & Manet Drive/Bobwhite Ave. to \$425,588.

Funding Sources

835210 - Improve Bicycle and Pedestrian Access at Sunnyvale Caltrain Station

Originating Year:	2021	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This study will evaluate the existing pedestrian and bicycle access to the Sunnyvale Caltrain Station north and south of the station. The study will make recommendations for improvements to signage, access paths, roadways, traffic control and bicyclist/pedestrian amenities. The study will also determine areas for the inclusion of public art displays. In addition, the study will include a public outreach component to obtain information about station users and data collection at the Caltrain parking lots as well as the City owned public parking lots in the area. The study will also provide a plan for stakeholder coordination on the proposed improvements and construction. The stakeholders include the City, Caltrain, VTA, the Sunnyvale Business Park, Downtown Business Association, and nearby residents. Finally, the study will evaluate the right-of-way restrictions, feasibility of improvements and possible sources of funding.

Project Evaluation and Analysis

The Sunnyvale Caltrain Station is a major transportation hub for the City. Currently the station serves over ten northbound trains during the morning commute and over ten southbound trains during the evening commute as well as five VTA bus transit lines. The station is bicycle-friendly with 74 bicycle lockers and bicycle accommodations on most transit lines. The station is adjacent to Evelyn Avenue which provides direct access for the area south of the railroad. Access to the station north of the railroad can be made through a pedestrian opening to the station at the intersection of North Frances Street and West Hendy Avenue. In addition, there is an unpaved pedestrian pathway leading to the station from the City-operated parking lot north of the railroad under the Mathilda Avenue overpass. The Study will perform a full evaluation of bicycle and pedestrian accessibility of the Caltrain Station and provide feasible recommendations for Sunnyvale Caltrain access improvements. All recommendations will include conceptual drawings of the proposed modifications with a cost estimate and any identifiable constraints. The project, when implemented, will improve pedestrian and bicyclist safety, and provide increased opportunities for bicycle activity in the City. It will benefit Sunnyvale's community as a whole by creating a safer and more comfortable walking and biking environment to and from the Sunnyvale Caltrain Station.

Fiscal Impact

Caltrans has awarded \$383,423 to conduct a study to improve bike and pedestrian access at the Sunnyvale Caltrain Station. The total cost of this study, including the City's local match, is \$433,100. The local match in the amount of \$49,677 is funded from the Community Benefits sub-fund in the Capital Projects Fund. As part of the study, a Funding and Implementation Plan will be developed to identify the cost estimates for the final design and construction of the recommended improvements.

835220 - Bike Rack Installation Program In Commercial Areas

Originating Year:	2021	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Thinh Le

Project Description/Scope/Purpose

This project will implement a Bike Rack Installation Program by providing bike racks for existing commercial/retail properties where there is currently a lack of bike parking available, and where none were required when the property was last redeveloped. A total of up to \$20,000 would be available to purchase new bike racks to be installed at existing commercial/retail properties. Staff would provide and install the bike racks for applicants based on their request, and the yet to be developed program guidelines. Applicants would be required to maintain the bike racks within a specified period of time, or reimburse the City for the bike racks obtained through the program.

Project Evaluation and Analysis

Staff would need to research the program to determine conditions, requirements and lessons learned from agencies with similar bike rack programs prior to the implementation of this program. Based on the research, Staff would develop guidelines, application processes, application requirements, and implementation procedures for the program. The program, when implemented, will improve pedestrian and bicyclist safety, and provide increased opportunities for bicycle activity in the City. It will benefit Sunnyvale's community as a whole by creating a safer and more comfortable walking and biking environment by providing additional bike parking in existing commercial areas.

Since the launch of the program in 2021, 15 bicycle racks have been installed for a total of 3 businesses.

Fiscal Impact

This project is funded by the General Fund. The budget of \$20,000 would be used to purchase the bike racks and the staff time to install them at existing commercial/retail properties with an approved application.

Funding Sources

General Fund

835250 - Bicycle and Pedestrian Education & Encouragement Program

Originating Year:	2020	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

In November 2016, Santa Clara County voters passed Valley Transportation Authority's (VTA's) 2016 Measure B, a 30-year half-cent countywide sales tax. A portion of the Measure B sales tax revenue has been allocated to a Bicycle & Pedestrian Education and Encouragement Program (BIKE/PED E&E Program) to promote, educate, and/or encourage safe walking or bicycling for residents, visitors, and/or school children. The program is implemented with each city in Santa Clara County receiving funding allocation based on their share of the County population.

To date, VTA has allocated \$771,036 to Sunnyvale as its share of the Measure B Bicycle & Pedestrian Education and Encouragement Program for FY 2017/18 through 2024/25.

The VTA 2016 Measure B BIKE/PED E&E Program will reimburse the City of Sunnyvale for costs of activities and projects, including: those under K-12 Safe Routes to School; Vision Zero; mode shift towards active transportation; pedestrian and bicycle map/marketing material distribution and development; walking and bicycling skills education; law enforcement for encouraging and enforcing safe walking and bicycling for motorists, pedestrians, and bicyclists' safety campaigns; purchasing and distribution of bicycle/pedestrian gear and safety equipment for education and incentives; special community events to encourage riding or walking; Bike to Work Day; valet bicycle parking; any other program approved by VTA in writing, as well as staff time to implement these programs.

Project Evaluation and Analysis

The VTA 2016 Measure B BIKE/PED E&E Program covers activities and the development and distribution of materials that are designed and intended to satisfy the following goals within Sunnyvale: (i) promote, educate, and/or encourage safe walking or bicycling for residents or visitors of every age and ability; (ii) communicate to residents and visitors the benefits of walking and bicycling; and (iii) communicate to school children, residents, and visitors the rights and responsibilities of pedestrians, bicyclists, and motorists.

DPW will work with Sunnyvale's Safe Route to School Coordinator to determine how to best allocate the fund to promote, educate, and encourage safe walking or bicycling for school children, as well as to promote and educate residents on safe traveling to achieve the Vision Zero goals.

Fiscal Impact

This project is funded by VTA Measure B grant, with VTA authorizing a total disbursement of \$771,036 for FY 2017/18 through 2024/25. Moving forward, VTA will notify Sunnyvale of its allocation every two years. There are no required matching funds.

Funding Sources

Measure B Fund

835260 - Tasman Drive Temporary Lane Closure

Originating Year:	2020	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Joshua Llamas

Project Description/Scope/Purpose

During the Coronavirus (COVID-19) pandemic, the County of Santa Clara Health Department has issued a Public Health Order to direct all individuals in the county to temporarily shelter in place as of March 16, 2020. City Council requested (RTC 20-0633) that staff investigate how to temporarily close a travel lane on Tasman Drive and to provide bicyclists and pedestrians additional space along the Tasman Drive corridor during the COVID-10 pandemic.

Tasman Drive between Fair Oaks Avenue and Lawrence Expressway is a four-lane commercial/industrial collector, with a light rail line dividing the eastbound and westbound traffic. A sidewalk is present on the south side of the roadway; however, a gap in sidewalks approximately 1600 feet in length exists between about 800 feet east of Tasman Court (opposite the West Entrance to Casa De Amigos) and Vienna Drive. There is currently no existing bicycle facility on Tasman Drive.

The City implemented a temporary lane closure on eastbound Tasman Drive between Fair Oaks Avenue to 800 feet east of Tasman Court. The temporary pathway consists of delineators to provide a physical separation from the vehicles traveling eastbound on Tasman Drive. As part of the implementation, additional temporary traffic control devices and signage were installed to provide guidance for drivers and other road users to safely travel along the Tasman Drive corridor. The lane closure has remained in place and is maintained with these funds.

Project Evaluation and Analysis

Due to the positive feedback regarding the temporary lane closure, Study Issue DPW 21-03, Pedestrian and Bicycle Facility Installation on Tasman Drive from Fair Oaks Avenue to Lawrence Expressway, was ranked by Council in 2021 to determine whether a permanent installation of bicycle and pedestrian facilities is feasible along this segment of Tasman Drive. That study is currently underway as CIP 835660, Pedestrian and Bicycle Facility Installation on Tasman Study. The funds in this CIP (835260) are currently funding the maintenance of the temporary lane closure until Council takes action on the recommendations of the study.

Fiscal Impact

The cost to maintain the Tasman Drive Temporary Lane Closure includes the replacement of delineators, other temporary traffic control devices and the required signages to temporarily close a travel lane, and the maintenance of the temporary pathway. Initial funding was through Council Set Aside.

835390 - Peery Park Rides Shuttle Program

Originating Year:	2020	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Joshua Llamas

Project Description/Scope/Purpose

The Peery Park Rides Shuttle Program is a pilot program that will operate for at least two years. The service will operate in and around the Peery Park Specific Plan (PPSP) area with connections to downtown Sunnyvale, and El Camino Real. The service will have an online/app-based component for ride requests/route information. The shuttle route and logistics will be planned in coordination with the Santa Clara Valley Transportation Authority (VTA), the City, and the shuttle operator, with input from businesses/employees in Peery Park. The primary focus of the shuttle program is to reduce single-occupancy vehicle trips associated with the PPSP area during peak am/pm commute hours. The service will also be available to residents who live near/within the service area.

Project Evaluation and Analysis

The Peery Park Rides Shuttle Program is a much needed first/last mile connection Transportation Demand Management (TDM) tool that will help employees within the PPSP, and nearby residents to connect with the Sunnyvale Caltrain Station, as well as dining/retail establishments in Downtown and along El Camino Real. Providing transportation via a fare free shuttle provides an alternative transportation option to employees/residents that promotes a decrease in the need for single-occupancy vehicle trips, especially during peak hours.

Fiscal Impact

Since VTA will serve as the primary project manager, no additional funds for ongoing project administration or operating costs are required. In 2024, VTA selected a vendor through a Request for Proposal (RFP) process led by VTA. Funds will be transferred to VTA in full once they submit an invoice to the City.

835630 - Stevens Creek Trail Extension (W. Remington Ave to W. Fremont Ave)

Originating Year:	2020	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project includes preliminary design and environmental clearance for extending the Stevens Creek Trail from Remington Drive to Fremont Avenue. This segment addresses a key trail gap within Sunnyvale. Due to alignment changes approved by Council in March 2023, the project scope expanded to include additional Caltrans review, environmental studies, and design updates—resulting in higher costs and delays. The City must now complete Caltrans' Project Study Report–Project Report (PSR-PR) process before proceeding.

The Valley Transportation Authority (VTA) has also requested a feasibility study for a trail overcrossing at Fremont Avenue. Staff is pursuing VTA Measure B funding to help offset these added costs, which will be available after the Caltrans process is complete.

Project Evaluation and Analysis

The project is building upon a coordinated trail planning effort between the cities of Cupertino, Los Altos, Mountain View and Sunnyvale that started in 2009. As a result of this coordinated effort and multiple public outreach events, the Joint Cities Coordinated Stevens Creek Trail Feasibility Study was completed September 2015. The Study identified and evaluated potential routes to complete the gaps in the existing Stevens Creek Trail. The Sunnyvale City Council selected the preferred alignment at their February 9, 2016 meeting (RTC No, 16-0034). This includes an off-street trail in the open space along State Route (SR) 85 and local network connections. A successful project will allow the City to move into final design and construction.

Fiscal Impact

Stevens Creek Trail Extension (W. Remington Dr. to W. Fremont Ave.) The total cost of environmental clearance and final design phase of the project, including the City's local match, is \$3,889,000. These phases are fully funded. Construction is estimated at \$40 million, to be refined during design.

FY 2021/22 Budget Modification No. 20 appropriated FY 2020/21 Measure B funds from the VTA Bike & Pedestrian Capital Program in the amount of \$3,500,000 and the 10% in local match funds from the Transportation Impact Fee Fund in the amount of \$389,000 to fund the environmental permitting and design costs for the Stevens Creek Trail Extension project (from W. Remington Dr. to W. Fremont Ave.).

FY 2022/23 - The project will receive \$3,000,000 in federal funds that will go towards the construction. The City has funded \$4,000,000 for a local-match. Staff will seek additional grant funding to complete the construction phase.

835660 - Pedestrian & Bicycle Facility Installation on Tasman Study

Originating Year:	2021	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Thinh Le

Project Description/Scope/Purpose

This project will conduct a traffic study to evaluate the removal of a travel lane in both directions of Tasman Drive between Fair Oaks Avenue and Lawrence Expressway. The study will include a traffic safety analysis, queuing analysis, and level of service analysis to evaluate whether a road diet is feasible on this corridor. It will include a topographic survey, identification of right of way lines, evaluation of drainage needs, and a recommendation for pedestrian and bicycle improvements. Improvements to evaluate include installation of sidewalks, Class IIB Bicycle Lanes or Class IV Separated Bicycle Facilities. Public outreach will be conducted to obtain feedback from the community. As part of the study, coordination with VTA and the County of Santa Clara will be required. A conceptual design will be provided for Council consideration. Final design will be completed subsequently if City Council approves the conceptual design and allocates funding for design and construction.

Project Evaluation and Analysis

Tasman Drive is a major east-west collector street that connects Sunnyvale, Santa Clara, San Jose, and Milpitas. The study segment consists of four travel lanes (two lanes in each direction), with light rail tracks and stations in the median. There is currently no bicycle facility on Tasman Drive, and there are sidewalk gaps along the corridor. This segment serves as vehicle access to the Casa de Amigos and Plaza del Rey mobile home communities, and there is a shopping center at the northeast corner of Fair Oaks Avenue and Tasman Drive.

Fiscal Impact

The budget for this project was approved through the FY 2021/22 Budget Adoption Process via Budget Supplement No.1 (RTC 21-0047). Additional funding will be required if Council approves a conceptual design for implementation.

835870 - Sunnyvale Quick Build Bicycle, Pedestrian and Safe Routes to School Safety Improvements

Originating Year:	2021	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

In 2021, the Metropolitan Transportation Commission (MTC) issued a call for projects for Safe and Seamless Mobility Quick-Strike Program. This project will receive \$1.9M in federal funds through the Coronavirus Response and Relief Supplement Appropriations Act of 2021 (CRRSAA) to support local and regional projects that can be implemented quickly to benefit communities responding and adapting to the COVID-19 environment. The project will implement quick build safe routes to school (SRTS) improvements at 9 elementary schools and 3 middle schools, as well as safety improvements at 7 locations throughout the City. The 9 elementary schools include: Bishop, Cherry Chase, Cumberland, Ellis, Fairwood, Lakewood, Nimitz, Stockmeir and Vargas. The 3 middle schools include Cupertino, Peterson and Sunnyvale.

Project Evaluation and Analysis

The Safe and Seamless Mobility Quick-Strike Program emphasizes bicycle/pedestrian safety and mobility, connections to transit, and projects that advance equitable mobility. The project will implement strategic quick build safety improvements to improve the walking and bicycling experience on Sunnyvale streets per the recommendations in the Active Transportation Plan (ATP), Vision Zero Plan, and Roadway Safety Plan, as well as requests from the public to improve bicycle and pedestrian safety at locations where there is currently a gap in the bicycle and pedestrian network.

Fiscal Impact

The budget for this project was approved via Budget Modification No.17 (RTC 22-0317). Metropolitan Transportation Commission - Coronavirus Response and Relief Supplemental Appropriations Act of 2021 (CRRSAA) Funds will cover 100% of the project cost.

The project budget was updated via Budget Modification No. 6 (RTC 23-0865). An increase of \$189,827 was added to the project from The Project 825290 - Pavement Rehabilitation - VRF Award Fund.

835930 - Re-evaluate Traffic Calming Program and Policy

Originating Year:	2022	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project will review the current process and methods of the City's neighborhood Traffic Calming Program. It will also examine other cities' traffic calming programs as well as best practices. The project will re-evaluate the thresholds and criteria to determine whether a street is eligible for traffic calming measures. It will include a review of any new and innovate designs of traffic calming measures since the 2004 update, including incorporating the Vision Zero Toolkit measures, and identification of the most effective and appropriate use of these new measures on streets that qualify for traffic calming implementations. The project will identify possible updates to the City's Neighborhood Traffic Calming Program handbook and Traffic Calming Policy.

Project Evaluation and Analysis

The City's current Neighborhood Traffic Calming Program was last updated in 2004. The City has received many requests for traffic calming from various neighborhoods, but recently few have qualified under the established thresholds due to traffic conditions or roadway classification not meeting the required thresholds. More often in recent times, Phase 1 improvements consisting of striping and signage have been sufficient to calm the roadway to below the required threshold. Since the last update of the City's Traffic Calming Policy 18 years ago, many new developments, including higher density residential developments, have been built, which led to an more congestion on the City's major roadways, resulting in increased cut-through traffic and speeding on neighborhood streets. This study will re-evaluate traffic calming evaluation thresholds, criteria and consider new and innovative traffic calming techniques.

Fiscal Impact

The budget for this project was approved through the FY 2022/23 Budget Adoption Process via Budget Supplement No. 1 (RTC 22-0492). The Study will include assessment of potential costs, including capital and operating due to potentially increasing the streets eligible for traffic calming measures and by adjusting thresholds.

835980 - Evelyn Avenue Multi-use Trail

Originating Year:	2022	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will design and construct a bicycle and pedestrian two way separated trail on the north side of Evelyn Avenue from the City limit at Bernardo Avenue to Mathilda Place. The existing bike lanes on Evelyn Avenue will be converted into this trail. The project will connect to a future City of Mountain View project that will install a bicycle and pedestrian two way separated trail to connect the two downtowns for active transportation modes. Design started 2023/24. Construction has begun and will complete in FY 2025/26

Project Evaluation and Analysis

Evelyn Avenue is a main bicycling commute and recreational route that connects to various roads, trails, and destinations throughout the cities of Sunnyvale and Mountain View. The project would be located on public right of way.

Fiscal Impact

The project sets aside \$68,197 of Transportation Impact Fee funding for the City's required local match. The project has secured grant funds from the State of California Department of Parks and Recreation, \$272,787 from the Per Capita program and \$3.8 million from the Specified Grants program. Design and construction are fully funded by the local match and the grant funds are already secured. Design is estimated at \$1 million and construction is estimated at \$3 million.

836040 - East Channel Trail Study

Originating Year:	2022	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

The East Channel Trail Study will evaluate a multi-use trail along the length of the East Channel within Sunnyvale from Homestead Road to the Bay Trail. This study will evaluate existing conditions, identify design constraints, determine trail alignment options, and evaluate alternatives at the crossings of local roadways. The project recommendations will include safety improvements for bicycles and pedestrians along the length of the trail. This project will provide a guidance document that staff can build upon for application of grants and inclusion into future design and construction projects. Upon completion, the East Channel Trail will enhance the walkability within the City and expand active transportation opportunities.

Project Evaluation and Analysis

The project scope includes a planning level study to create a multi-use trail along the East Channel within the City of Sunnyvale limits, from Homestead Road to the Bay Trail. The final project deliverable will be a guidance document to inform future grant applications and design/construction projects.

Fiscal Impact

VTA has authorized the disbursement of \$830,000 for the study phase of the project. Google, LLC, has provided a voluntary contribution of \$1,000,000 towards the study phase of the project. The total cost of this phase of the project, including the City's local match, is \$2,830,000. The cost for environmental clearance, design, and construction of the project will be estimated through the study phase. FY 2022/23 Budget Modification No. 3 appropriated Measure B funds from the VTA Bike & Pedestrian Planning Studies program in the amount of \$830,000, Google LLC voluntary contribution in the amount of \$1,000,000, and local match funds from the Transportation Impact Fee Fund in the amount of \$1,000,000 to fund the East Channel Trail Study.

836160 - Objective Standards for New Land Development Projects

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project will include the review of planning documents and guidelines as related to Public Works to determine whether the design criteria identified for items in the public right-of-way are "objective." If they are "subjective," the project will review industry recognized guidelines and other local agencies' requirements, provide objective guideline recommendations, develop and prepare objective standards for improvements within the public right-of-way for use in future land development projects.

Development of objective standards will cover various types of designs within the public right-of-way, including but not limited to:

1. Driveway spacing, number of driveways and driveway locations, based on types of roadway classifications, land use, existing and proposed bicycle facilities, speed of the roadway and location of the development.

2. Intersection corner radius for different roadway configurations

3. ADA Curb Ramps design, orientation and location

4. Signal upgrade criteria

5. Sidewalk width and types

6. Travel lane width"

Project Evaluation and Analysis

In 2019, the State of California adopted Senate Bill No. 330 (SB 330), also known as the Housing Crisis Act of 2019. SB 330 amended the Housing Accountability Act and Permit Streamlining Act, and added new provisions to the Government Code to help streamline housing project approval process. SB 330 prohibits cities and counties from denying or making infeasible "housing development projects" if they are consistent with "objective, quantifiable, written development standards, conditions and policies," unless certain findings are made. Many of Sunnyvale's planning documents such as the General Plan, Specific Plans and Area Plans and guidelines, include "subjective" design criteria rather than "objective standards", therefore, making it difficult for the City to enforce these standards or guidelines. Review and adjustment of documents will also help implementation of Vision Zero Plan, Active Transportation Plan and other city plans.

Fiscal Impact

The project is funded by the Development Enterprise Fund. The project will not impact the General Fund.

Funding Sources

Development Enterprise Fund

836200 - Bicycle Improvements Planning Study

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project provides funding to perform feasibility studies to implement bicycle improvements as identified in the Active Transportation Plan (ATP) per Map 17: Future Design Considerations Roadway Needs for Bicycle Recommendations. As shown on Map 17, some bicycle improvements could only be implemented if on-street parking is removed, or if roadway space is reallocated. Depending on the location, a traffic impact analysis is required to evaluate specific site conditions, determine impacts related to the change, conduct public outreach to collect public input and to develop conceptual design in order to obtain City Council approval of the roadway changes prior to pursuing grant funding.

This project will perform analysis for one location every three years. The first three locations include:

1. Mathilda Avenue between Almanor Avenue and Del Rey Avenue (southbound only)
2. Reed Avenue between Wolfe Road the Willow Avenue (eastbound only)
3. Fremont Avenue between Bernardo Avenue and Sunnyvale-Saratoga Avenue

Additional locations will be included in future years based on the locations as listed on Map 17 in the ATP.

Project Evaluation and Analysis

In the City's Active Transportation Plan (ATP), which was adopted by City Council in 2020, bicycle network improvements were identified in the Bicycle Chapter. However, further analysis is required prior to implementing some of the project recommendations, as they may involve removal of on-street parking or potential roadway reallocations. Based on the approved ATP staff will conduct feasibility of the individual bikeways through detailed engineering studies, cost estimating, and public outreach, in order to make potential projects shovel ready for upcoming grant applications. Map 17 of the ATP provides a city map that indicates which projects may require roadway reallocations, or on-street vehicle parking removal, and thus require additional analysis to determine feasibly as well as to obtain public input.

Fiscal Impact

The cost for the feasibility study varies for each location depending on the type of study involved as well as the project limits. The project will perform analysis for one location every three years. The project is funded by General Fund.

If City Council approves the individual feasibility study, it will provide shelf-ready improvements, and Staff can look for funding opportunities in the future to implement the improvements.

Funding Sources

General Fund

836290 - Street Name Sign Replacements

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project will replace the existing street name signs throughout the City with updated signs that meet the latest California Manual on Uniform Traffic Control Devices (CA-MUTCD) standards and requirements. The new signs will have easier to read fonts to improve accessibility of the signs throughout the City. Revisions include using upper and lowercase letters, using Clearview font, and using signs that provide the best retro reflectivity characteristics for nighttime viewing.

The City of Sunnyvale has replaced existing signs as part of other projects where applicable. This project will update the remaining signs over an 8 year period. Signs will be fabricated either by an outside contractor or by City crews, and the installation will be done by City crews. The 1st phase will replace 800 street name signs and 100 sign poles. The 2nd phase will replace 1000 street name signs and 150 sign poles. The 3rd phase will be 1000 street name signs and 150 sign poles.

Project Evaluation and Analysis

The Federal Highway Administration (FHWA) maintains the national standards for traffic control devices including street name signs. The California Department of Transportation (Caltrans) revises these standards to apply to California roadways. The latest versions of these standards have included changes to various aspects that apply to street name signs. The replacement will improve visibility for the City's aging population and overall general public, and bring the signs up to current standards. Many of the signs are fading, in need of replacement, and not in compliance with Federal and State standards.

Fiscal Impact

This project is funded by Gas Tax. All expenditures for the project will go towards the costs of fabricating and producing new street name signs, and installation throughout the City.

Funding Sources

Gas Tax Fund

836340 - Transportation and General Fund Grant Matching

Originating Year:	2022	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

With the anticipated land use growth and climate change, there are planned transportation and sustainability-related improvements identified in order to address future conditions and needs. This project provides funding that will serve as local matching funds towards state and/or federal grant opportunities to plan, design, implement transportation or greenhouse gas reduction related projects. Additionally, there is \$500k included to hire consultants to provide grant writing assistance.

Project Evaluation and Analysis

In recent years, the City adopted various plans to promote transportation safety, alternative transportation modes, sustainability and climate action. These plans identified potential improvements, programs and action items to be implemented in order to achieve the goals as identified in these plans. This project would provide dedicated funding for grant matching purposes and to hire consultants to prepare grant applications. This will allow the City to become more competitive when applying for federal or state grants.

Fiscal Impact

In December 2022, the City Council approved Budget Modification No. 8 (RTC 22-0746) in the amount of \$21,845,844 to allocate funding from the General Fund. Of which, \$2,500,000 has been allocated for grant matching associated with transportation, sustainability, or other General Fund supported grants. Out of the \$2,500,000, \$2,000,000 is set aside for the City's local match portion for State and/or Federal grants while \$500,000 is allocated towards grant writing assistance.

836350 - MTC Pavement Management Technical Assistance Program Matching Funds

Originating Year:	2022	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Sean Smith

Project Description/Scope/Purpose

The project includes updating the City's Pavement Management System (PMS) database in accordance with MTC StreetSaver Online Pavement Management Program (PMP). The City will work with MTC's consultant to complete a pavement management system update from May 2023 to April 2024.

The project includes reviewing the City's street inventory data, conducting PCI surveys, and analyzing maintenance and rehabilitation budget needs. The consultant's field surveys will replace the City's self-performed annual inspections and audit the City's overall road network. This report assesses the adequacy of the current budget. The report also identifies recommended budget scenarios that will improve the City's Maintenance and Rehabilitation strategies over the next five years. The project will produce a report that utilizes the results of the field survey data to analyze and recommend budget options for the City's PMS.

Project Evaluation and Analysis

The project will renew the City's PMP certification for two years, ensuring that the City remains eligible for future funding opportunities from MTC. The project will provide useful information regarding the resources necessary to reach a PCI of 80, which is the City's current goal, or identify another PCI goal that would be more appropriate upon further consideration. The certification is required every five years and will require local matching funds in the future.

Fiscal Impact

This project is funded from the Pavement Management Technical Assistance Program (P-TAP) Round24 administered by the Metropolitan Transportation Commission. To secure the grant funds of \$73,000, the City is required to provide a local match of 20% of the total project cost of \$91,300. The City's local match of \$18,300 is proposed to be funded by the General Fund. Increase Cost to City Upon Grant Termination: None.

836410 - Groundwater on Moffett Park Drive

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Connie Phan

Project Description/Scope/Purpose

Groundwater is draining northward onto Moffett Park Drive east of the Java Drive Overcrossing, and is ponding within the roadway, leading to the growth of slippery algae in the bike lane. The groundwater is originating from the landscape area south of the roadway, which is within both City and Caltrans right of way. This project will make the area safer for bicyclists by providing for design and construction of a solution that reduces groundwater drainage onto Moffett Park Drive by capturing groundwater with subsurface drainage in the landscape area and connection to the nearest storm drain line. The project will require field investigations, a field survey, conceptual designs, and construction.

The engineering design phase of the project is in FY 2024/25. Construction phase will follow once funding is identified.

Project Evaluation and Analysis

The alternative to the project is to delay funding to later years. However, if funding is delayed for too long, there will be a prolonged risk to bicyclists using this segment of Moffett Park Drive.

Fiscal Impact

This project is funded by the General Fund. Project funds are for design only and will need additional funds for construction. The design funds will be used to explore the best options for work to mitigate the problem. Additional funds may be needed in the future for construction.

Funding Sources

General Fund

836450 - Caltrain Grade Separation at Sunnyvale Avenue

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2036/37	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

The project will environmentally clear, complete final design, and construct the Caltrain grade separated crossing at Sunnyvale Avenue. This work will be based on the final City Council direction on the Feasibility Study, completed in 2022 (RTC 22-0911, CIP 832330, Study Issue DPW 14-13). The project will close the section of Sunnyvale Avenue between Evelyn Avenue and Hendy Avenue. A bicycle and pedestrian only underpass will be constructed under the Caltrain railroad tracks. Improvements for active transportation modes through the project area will be incorporated.

Project Evaluation and Analysis

The Caltrain Electrification has enabled Caltrain to run faster and more trains along this portion of the rail corridor. The Caltrain Business Plan calls for additional trains as well. With the number of trains currently running and estimated in the future by Caltrain, the safety and traffic congestion at Sunnyvale Avenue will be very negatively impacted. A grade separation provides a complete separation of the railroad traffic from all modes of local traffic. A bicycle and pedestrian only underpass supports the existing active transportation network and encourages greater use of non-vehicular modes of travel.

Fiscal Impact

The project will be funded through a combination of sources, to be determined. Currently, the project has \$43.25 million in 2016 VTA Measure B funds (\$4 million for environmental, \$12.6 million for Design, and \$26.65 million for construction) and will require a local match from the Transportation Impact Fund. The project cost is estimated at \$149 million. There is still an unfunded amount of \$105,750,000.

Funding Sources

VTA Measure B and the Transportation Impact Fund.

836460 - Caltrain Grade Separation at Mary Avenue

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Capital	Project Manager:	Angela Obeso

Project Description/Scope/Purpose

The project will environmentally clear, complete final design, and construct the Caltrain grade separated crossing at Mary Avenue. This work will be based on the final City Council direction on the Feasibility Study, completed in 2022 (RTC 22-0041, CIP 832330, Study Issue DPW 14-13). The project will lower Mary Avenue underneath Evelyn Avenue and the Caltrain railroad tracks. A "jughandle" roadway will be constructed to connect Mary Avenue and Evelyn Avenue. Improvements for active transportation modes through the project area will be incorporated.

Project Evaluation and Analysis

The Caltrain Electrification has enabled Caltrain to run faster and more trains along this portion of the rail corridor. The Caltrain Business Plan calls for additional trains as well. With the number of trains currently running and estimated in the future by Caltrain, the safety and traffic congestion at Mary Avenue will be very negatively impacted. A grade separation provides a complete separation of the railroad traffic from all modes of local traffic.

Fiscal Impact

The project is partially funded by the VTA 2016 Measure B Grade Separation program with a local match from the Transportation Impact Fees (TIF). The remainder of the funding will be provided through a combination of sources, to be determined. Currently, the project has \$131,250,000 (\$24 million for design and \$107.25 million for construction) secured through 2016 VTA Measure B funds, and \$1 million in TIF funds for the City's local match. With an estimated total project cost of \$325,000,000, the remaining funding to be secured is \$192,750,000.

836550 - Bike Lanes on Hollenbeck Avenue between El Camino Real and Homestead Road

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

The project will include a review of existing and future vehicle, bicycle, and parking usage on Hollenbeck Avenue between Homestead Road and El Camino Real. The project will evaluate the most appropriate bicycle facility, if feasible, for this segment of Hollenbeck Avenue, based on existing roadway widths, level of service analysis, VMT analysis, collision analysis, parking occupancy analysis, potential parking diversion and public outreach efforts. The public outreach component will evaluate public support for the project through a variety of means such as community meetings, online surveys and/or mail surveys.

Project Evaluation and Analysis

In 2020, the City adopted the Active Transportation Plan (ATP), which has identified bicycle, pedestrian and safe routes to school improvements needed throughout the City. Under the existing conditions, only portion of Hollenbeck Avenue has bicycle facility, and in the ATP, future bicycle facilities have not been identified on Hollenbeck Avenue since there are existing and proposed bicycle facilities on the parallel routes. Study Issue DPW 21-01 was proposed to determine the feasibility of installing Class II bicycle facilities on Hollenbeck Avenue to close the gap of missing bicycle lanes and provide direct access to schools, parks and retail through the Hollenbeck Avenue/Stelling Road corridor.

Fiscal Impact

In June 2023, as part of the FY 2023/24 Budget Adoption process, the City Council approved Budget Supplement No. 1 (RTC 23 -0544) to fund 11 study issues ranked above the line at the Council's February 16, 2023 Study Issues/Budget Proposals Workshop. As part of the Budget Supplement, \$175,000 from General Fund is approved to fund this project.

836580 - Alternative Transportation Options for Fremont & Homestead High School Students

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Joshua Llamas

Project Description/Scope/Purpose

The project will evaluate a range of options for shuttle service or alternative transportation options serving high school students living in the northern part of Sunnyvale. It will include a public outreach component, which includes public meetings and online surveys for students and parents who attend Fremont and Homestead High Schools, to understand the needs and potential usage of the program.

The project will determine the quantity of shuttles or alternative transportation options needed, routes, schedule, and shuttle stop locations. It will also determine the format of shuttle service: fixed-route(s) or on-demand. The project will coordinate with the school district and VTA on potential partnership in deploying such service and the development of a future communication plan to students and families. The study will quantify the operating costs for a shuttle program, fare structure, and identifying ride share funding opportunities and other transportation options.

Project Evaluation and Analysis

The existing transit service provided by the VTA is limited in terms of bus routes and schedule, especially for students who live in the northern part of Sunnyvale. Implementing a shuttle service or alternative transportation option program would provide more flexibility than traditional fixed-route bus services, potentially a shorter wait time and a shorter walking distance for students to attend school, as well as their after-school activities. A shuttle service program has the potential to decrease automobile reliance, and if electric shuttles are utilized, to reduce greenhouse gas emissions.

Fiscal Impact

In June 2023, as part of the FY23/24 Budget Adoption process, the City Council approved Budget Supplement No. 1 (RTC 23-0544) to fund 11 study issues ranked above the line at the Council's February 16, 2023 Study Issues/Budget Proposals Workshop. As part of the Budget Supplement, \$150,000 from General Fund is approved to fund this project.

836650 - Bicycle and Pedestrian Collision Investigation Pilot Program

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

The project will hire a consultant to conduct collision analysis for up to three collisions with a fatal or severe injury that involve a motor vehicle and a bicyclist or pedestrian to determine the collision factors, such as design, human factors, or violation of existing laws. The City Manager will have the discretion to determine which three collisions would be appropriate for an evaluation, after the conclusion of an investigation by Department of Public Safety.

The project will identify possible engineering improvements from the Vision Zero Plan countermeasure toolbox, and if appropriate, potential education or enforcement programs to be implemented to avoid future collisions. The investigation will include conceptual costs to implement the recommended improvements, including design, construction, staffing, and any maintenance and operation costs associated to the improvements.

Project Evaluation and Analysis

In 2019, City Council adopted the Vision Zero Plan, which included goals to reduce fatalities and serious injuries by 50 percent by 2029 and continue improving traffic safety towards zero fatal and serious injury collisions in the ten years that follow and call to action to make Sunnyvale's streets safer. This project will conduct collision analysis for incidents with a fatal or severe injury to understand the factors contributing to the collisions, and therefore identify the possible engineering improvements that could be implemented to avoid future collisions to support the City's effort in achieving goals identified in the Vision Zero Plan.

Fiscal Impact

Budget Proposal DPW 23-02 to hire a consultant to implement a Bicycle and Pedestrian Collision Investigation Pilot Program was funded with adoption of the FY 2023/24 Budget. Additional resources will be required to implement results of the study.

836760 - Install Sidewalk on Poplar Avenue

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

In May 2023, the findings of the Poplar Avenue Sidewalk Study (DPW 21-04) was presented to Council for acceptance and Council action. Staff recommended Council's acceptance of the findings of Poplar Avenue Sidewalk Study, installation of a 6-foot wide sidewalk and 4-foot wide park strip along the east side of Poplar Avenue and installation of a minimum 6-foot wide sidewalk on the north and south sides of Bryant Way east of Poplar Avenue (RTC 23-0067).

This project consists of the design of a new public sidewalk and related storm water drainage infrastructure and striping along the east side of Poplar Avenue between El Camino Real and Rosalia Avenue and a small segment of Bryant Way east of Poplar Avenue where no sidewalk currently exists. The construction of the sidewalk will be a future phase of the project.

Project Evaluation and Analysis

This project is consistent with the priorities and goals of the City's General Plan and Active Transportation Plan. It will provide a critical pedestrian and bicycle linkage for students accessing Peterson Middle School on Poplar Avenue from the Ponderosa Park neighborhood north of El Camino Real.

Fiscal Impact

Transportation Development Act (TDA) funds will cover 100% of the design phase of the project (RTC 24-0016). For the construction phase, the estimated project cost is approximately \$895,000.

836780 - Sunnyvale ITS Communications and Infrastructure

Originating Year:	2023	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

The project will design, procure and implement traffic signal equipment and communications equipment on Maude Avenue between Mathilda Avenue and Wolfe Road and on Mathilda Avenue between Maude Avenue and Olive Avenue. All equipment will connect to City Hall. This equipment will include fiber optic cables, traffic monitoring cameras and Americans with Disabilities Act approved touchless accessible pedestrian system buttons where they do not currently exist along these corridors. These corridors are used/crossed by VTA Bus Lines 21, 55, 56, 255, and 523. Mathilda Avenue is also a Congestion Management Program (CMP) facility which carries significant commute and regional traffic. This project serves one of the Equity Priority Communities in Sunnyvale bounded by the Maude Avenue to the south, Fair Oaks/Wolfe Road to the east, Hwy 101 to the north and Mathilda Avenue to the west.

Project Evaluation and Analysis

The City's Intelligent Transportation Systems (ITS) Master Plan was created to identify hardware and infrastructure needed for the buildout of the traffic signal communication network utilizing fiber optic technology. The ultimate goal is to integrate all of Sunnyvale's traffic signals and ITS components (e.g., traffic monitoring cameras, connected vehicle infrastructure, Bluetooth travel time sensors, and video detection camera systems) into the City's Centralized Advanced Traffic Management System.

To date, portions of the City's traffic signal communication system have been updated from copper signal interconnect wiring to fiber optic cables. Various other ITS components have also been implemented. This project will further advance the ITS Master Plan goals.

Fiscal Impact

The design and construction of this project will be completely funded by the 2010 Measure B Vehicle Registration Fee (VRF) Countywide Program Funds - Cycle 4. FY 2023/2024 Budget Modification No. 16 was approved by City Council on March 19, 2024 (RTC24-0182).

836950 - Improving Pedestrian & Bicycle Safety Near Fremont HS & Homestead HS

Originating Year:	2024	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

The proposed study would evaluate the potential of implementing a pedestrian scramble during school peak hours only at the intersections of Sunnyvale-Saratoga Road/Fremont Avenue near Fremont High School, and Homestead Road/Kennewick Drive near Homestead High School. The study will include field investigation, data collection and traffic analysis to determine the feasibility of implementing a pedestrian scramble at these two locations. A conceptual design and engineering and construction costs estimates will be provided for Council consideration. Final design will be completed subsequently if City Council approves the conceptual design and allocates funding for design and construction.

Project Evaluation and Analysis

Fremont and Homestead High Schools both serve Sunnyvale residents and have a combined enrollment of approximately 4,500 students. Fremont High School is located at the northwest corner of the Sunnyvale-Saratoga Road/Fremont Avenue intersection. It is a Congestion Management Program intersection monitored by the Santa Clara Valley Transportation Authority. Along the school frontage, Sunnyvale-Saratoga Road is a north-south, six-lane Class I Arterial with a speed limit of 40 mph; Fremont Avenue is a east-west, four-lane Class II Arterial that connects Highway 85 to El Camino Real, with a speed limit of 40 mph. Homestead High School is located in the City of Cupertino, south of Homestead Road between South Mary Avenue and Kennewick Drive. A portion of Homestead Road along the school frontage and the traffic signals of Homestead Road at South Mary Avenue and at Kennewick Drive are under the City of Sunnyvale's jurisdiction. Homestead Road is an east-west, four-lane Class II Arterial with a speed limit of 35 mph.

Fiscal Impact

There is no anticipated ongoing operating costs from the study. However, this study may identify potential areas of maintenance.

837050 - Lakewood Safe Route to School

Originating Year:	2024	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

The goal of the Lakewood Safe Route to School Project is to encourage walking and biking for all ages and abilities, reduce vehicle speeds, reduce crossing distances for pedestrians, and improve visibility of pedestrians. The City's 2020 Active Transportation Plan identified and prioritized locations, such as Lakechime Drive/Meadowlake Drive for safety improvements. Improvements include curb radius reductions, curb extensions with ADA curb ramps, high visibility crosswalks, and pedestrian safety signs and striping, pavement improvements, and street signs and utilities relocation. Streetlights will be modified to enhance lighting conditions and improve visibility for the public. Green storm water infrastructure may also be implemented to better facilitate storm water runoff in the area.

Project Evaluation and Analysis

This project is necessary to improve the overall health, safety, and connectivity when walking or biking to school.

Fiscal Impact

The City received \$1,750,000 of Priority Legislative Budget Projects (2023 AB102) funding for design and construction of safe routes to school improvements. There are no additional costs associated with this project. On October 29, 2024, City Council approved Budget Modification No. 4 (RTC 24-0945) to appropriate \$1,750,000 in PLBP funding for the Lakewood SRTS project.

837090 - Pedestrian and Safe Routes to School Improvements in SNAIL and Braly Corners Neighborhoods

Originating Year:	2024	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Connie Phan

Project Description/Scope/Purpose

The project will implement pedestrian and Safe Routes to School improvements at three intersections; two intersections are near Columbia Middle School in the Sunnyvale Neighbors of Arbor Including La Linda (SNAIL) neighborhood, and one intersection is near Braly Elementary School in the Braly Corners neighborhood. The intersections include Borregas Ave./Hemlock Ave., Borregas Ave./Duane Ave., and Gail Ave./Gladiola Dr. The project will include installation of enhanced crossing improvements, Rectangular Rapid-Flashing Beacon (RRFB), high visibility crosswalks, advance yield markings, curb extensions, streetlight improvements, and incorporate green stormwater infrastructure elements.

In 2023, the City received the Community Project Funding / Congressionally Directed Spending (CPF/CDS) grant, managed by Caltrans, for the construction of the project in the amount of \$880,000; which requires a 11.47% local match, for a total construction budget of \$1,000,000. The environmental and design phases are being completed under CIP 833010 Bicycle and Pedestrian Safety Improvements.

Project Evaluation and Analysis

The proposed improvements are located in two Communities of Concern in the City of Sunnyvale as identified by the Metropolitan Transportation Commission (MTC), the metropolitan planning organization for the nine-county San Francisco Bay Area. The project improvements would enhance the crossing experience and safety for students walking to and from the two Sunnyvale neighborhood schools. Additionally, the project improvements are aligned with the recommendations of the City's adopted Active Transportation Plan (ATP), which addresses the needs of walking and biking. The ATP also focuses on implementing safe routes to school, and prioritizing biking and walking safely along students' path to school.

Fiscal Impact

The total construction cost is \$1,000,000, of which \$880,000 is from Community Project Funding/Congressionally Directed Spending (CPF/CDS) federal grant funds and a 11.47% local match of \$120,000 is from CIP 836340 Transportation and General Fund Grant Matching.

837370 - Establish Safety Corridors for Speed Limit Reduction

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Capital	Project Manager:	Angela Wong

Project Description/Scope/Purpose

The project will hire a consultant to conduct collision analysis on all city streets to identify the safety corridors within the City per California's Assembly Bill 43 (AB 43). Furthermore, once the safety corridors are defined, the consultant will conduct an evaluation to determine whether the posted speed limits could further be reduced on the safety corridors. The project will include data collection for locations where such data are not available.

Project Evaluation and Analysis

California's Assembly Bill 43, grants local jurisdictions more flexibility in setting speed limits, including the creation of "safety corridors" where speed limits can be reduced below the traditional 85th percentile calculation. Safety Corridors are determined based on collision data. Sunnyvale needs to establish safety corridors to be able to consider lowering the posted speed limits further than what the state law allows.

Fiscal Impact

There are no additional ongoing operational costs anticipated.

815901 - Lawrence Expressway and Wildwood Ave. Realignment

Originating Year:	2002	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project provides funding for the realignment of Wildwood Avenue and the construction of a new signalized intersection at Wildwood Avenue/Lakewood Drive and Lawrence Expressway. The project requires the approval of the County and CalTrans. The project has been submitted for outside funding through the Valley Transportation Plan 2040 (VTP 2040) and is currently recommended for a funding allocation at some time over the 25 year lifetime of the Plan. Operating costs for signal electricity and maintenance would be incurred. County will be the lead agency for this project.

Project Evaluation and Analysis

The project will improve roadway level of service at the Lawrence/Sandia intersection, and may reduce non-resident traffic intrusion in the area. The project is being pushed back by four years. The City needs further coordination with the County of Santa Clara and to further research and identify funding for design and construction.

Fiscal Impact

This project is unfunded. Additional resources will be required for the Traffic Operations program to operate the new traffic signal subsequent to construction. It is expected that this project will be grant funded with the City share being 20%. Staff recommends this project be included in the Unfunded Projects List until the revenue sources are secured. As funding opportunities present themselves, individual projects will be brought before the Council for consideration and budget appropriation.

It is estimated that VTP 2040 would fund 80% of the project cost and the City would provide a 20% local match. Two million (\$2M) will come out of TIF Funds.

826570 - Tasman/Fair Oaks Area Streetscape and Sense of Place

Originating Year:	2006	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project is identified in the Tasman/Fair Oaks Pedestrian and Bicycle Circulation Plan. The project is located in the area bounded by Tasman Drive, Morse Avenue, Weddell Drive and Fair Oaks Avenue. The project includes sidewalk construction, intersection enhancements, bus stop enhancements, monument and gateway signs, and other improvements.

Phase I and Phase II projects were completed in FY 2010/11 and FY 2011/12 respectively.

Additional improvements are planned in Phase III of this project including pedestrian improvements and sidewalk construction along Fair Oaks and Weddell, lighting installation on the west side of Morse Avenue south of Tasman Drive, and enhanced crosswalks along Morse Avenue at the John W. Christian Greenbelt and Weddell Drive. These remaining improvements are scheduled to be constructed in FY 2028/29. However, these improvements are revenue dependent as a funding source has not yet been identified.

Project Evaluation and Analysis

The project will increase the service level by improving livability for the residents in the neighborhood. It also encourages increased pedestrian, bicycle and transit use through streetscape improvements, land use planning and architectural design. Additional grant revenue will be necessary to complete Phase III elements.

Fiscal Impact

This is dependent on grant funding. Grants to potentially apply for need time to research and work into the work plan. If a potential grant source is identified and there is a call for projects prior to the projected funding date, staff will apply for the grant and accelerate the project.

835520 - Wolfe Road/Fremont Avenue/El Camino Real Improvements

Originating Year:	2021	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

The project will include environmental review, design, and construction of traffic circulation improvements as identified in the Wolfe Road Corridor Traffic Improvement Study and the preferred Triangle Alternative chosen by City Council on June 21, 2016. The project includes improvements of the traffic operations for the triangle formed by the intersections of Wolfe Road/El Camino Real, Wolfe Road/Fremont Avenue, and El Camino Real/Fremont Avenue. The improvements include traffic signal installations and modifications, median modifications, travel lane modifications, bicycle facility installations, and sidewalk installations.

Project Evaluation and Analysis

The Wolfe Road Corridor Traffic Improvement Study was completed and presented to the Council on June 21, 2016. City Council voted to approve a preferred Triangle Alternative and move forward for further analysis. Additional analysis and coordination with Caltrans are required for the triangle formed by the intersections of El Camino Real/Wolfe, El Camino Real/Fremont, and Wolfe/Fremont.

Typically it takes 2-3 years to complete the ENV/Design phases. Extra time has been scheduled in between design and construction to look for funding sources or grant opportunities.

Fiscal Impact

This project is currently unfunded. Staff will look for funding sources, which might include grant opportunities, development impact fees from specific area plans, inclusion in the Transportation Strategic Program, and sales tax measures. As funding opportunities present themselves, this project will be brought before the Council for consideration and budget appropriation. Once the project is completed, there will be an annual operation and maintenance cost associated with the new signal that will be installed at the intersection of El Camino Real and Fremont avenue as part of the project.

900141 - Future Traffic Calming Projects

Originating Year:	2004	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Lillian Tsang

Project Description/Scope/Purpose

This project provides funding for future traffic calming projects. Traffic calming devices slow traffic and deter non-neighborhood traffic in residential areas of the City. This project provides for the construction of neighborhood traffic calming devices as a result of studies and neighborhood consensus building. The proposed project budget will allow for installation of approximately one comprehensive traffic calming project per year. The locations have not been determined, and the project budget is based on anticipated and historical demand. The operating cost budget is required to pay for landscaping and maintenance costs, if necessary, related to the devices. These funds will be expended only at the conclusion of neighborhood-specific traffic calming studies per the Council-adopted policy. These studies include a technical determination of need, a resident consensus-building process, and Council endorsement of study recommendations for construction of traffic calming devices.

Project Evaluation and Analysis

This project anticipates traffic calming requests and provides funding to meet resident desires for traffic calming.

Fiscal Impact

This project is currently unfunded. Operating costs are estimated at \$3,000 annually per project.

Funding Sources

Gas Tax Fund Eligible

900469 - El Camino Real Gateway Program

Originating Year:	2008	Project Type:	Traffic and Transportation	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project implements gateway improvements identified in the Precise Plan for El Camino Real, adopted by Council on January 23, 2007 (RTC 07-003). Gateway locations are identified near the east and west City limits on El Camino Real. The goal of the El Camino Real Gateway Program is to enhance the City's "front doors" by not only constructing improvements in the areas seen by most people, but by doing so in a way that provides a unique identity and sense of place for each location and the edges of the City. The program will establish design standards for each location. The overall design concept could be to provide towers, fountains, beacons, gateposts, pylons, or signs that become focal points to the City. The Program will require coordination and agreement with Caltrans. The update to the Precise Plan is currently underway and funded through a grant from MTC. The update will result in better defined development and design standards and can further refine the locations and purpose of the El Camino Real Gateway Program. Implementation of the updated Precise Plan, including gateway features, may qualify for grant funding.

Project Evaluation and Analysis

Enhancements to gateways would promote Sunnyvale as a destination for business, which would enhance the local economy.

Fiscal Impact

This project is currently unfunded. Staff recommends this project be included in the unfunded projects list until revenue sources are secured.

Funding Sources

Future Grant Funding

900692 - Calabazas Creek Trail Low Water Crossings

Originating Year:	2009	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project provides for the planning, design, and construction of low water crossings under Tasman Drive and Highway 237. These connections will provide improved public access and safety through bypassing a physical barrier of cross street traffic. This project will greatly enhance the public's ability to experience the natural environment of Calabazas Creek and increase the recreational and alternative transportation opportunities in the region. The Highway 237 undercrossing will provide a direct connection between the Bay Trail and the Calabazas Creek Trail.

Project Evaluation and Analysis

This project originated from a 1994 study issue of opportunities for trail development along flood channels. This project will enhance the public's ability to experience the natural environment of Calabazas Creek and increase the recreational and alternative transportation opportunities in the region.

Fiscal Impact

This is a project of fairly significant cost due to environmental requirements, construction in a creek floodway, and coordination with a number of regulatory agencies and jurisdictions. The project will have ongoing operating costs to operate gates at the crossings during periods of high water, clean the trail after high water periods, graffiti removal and undercrossing lighting maintenance. This project is currently unfunded pending the identification of a funding source.

Funding Sources

Water Supply and Distribution Fund. Possible grant funding available.

900933 - Fair Oaks Junction Sense of Place Improvements

Originating Year:	2014	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides circulation, bicycle, and pedestrian improvements in the area defined by the Fair Oaks Junction Sense of Place Plan, located roughly near the intersections of Wolfe Road, Fair Oaks Avenue, and Arques Avenue. The scope includes construction and reconstruction of sidewalks, construction of bike lanes and bike paths, provision of upgraded bus stops, placement of neighborhood marker signs and monuments, and installation of bicycle parking. The purpose of the project is to enhance the quality of life for residents in the area, provide bicycle and pedestrian improvements to encourage use of these modes, and to provide complete streets that serve all transportation modes.

Project Evaluation and Analysis

The Fair Oaks Junction plan was approved for development by the City Council in January 2012, and the Final Plan was approved by the City Council in October 2012. The improvements called for in the Plan would take place through development conditions, developer fees on redeveloped properties in the area, and securing of outside grants. The actual scope of specific construction activities will be refined to coordinate with improvement needs and opportunities as the area redevelops.

Fiscal Impact

This project is currently unfunded. The project will occur as redevelopment of the area occurs, fees on redeveloped properties are realized, and outside grant funds are secured. There will be a fiscal impact for operation and maintenance of new and improved bicycle and pedestrian facilities, such as bike lane and path re-striping and pavement maintenance, lighting, and sign repairs and replacement.

Funding Sources

Sense of place fees. Outside grants.

901195 - Traffic Signals Replacement

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Carmen Talavera

Project Description/Scope/Purpose

The City has 135 traffic signals out of these 86 are beyond stipulated design life and are long due for replacement. These signals require frequent maintenance and are becoming expensive to maintain. Also design standards and technologies have since changed, therefore they have limited capability to meet the need of current traffic patterns. The total replacement of these traffic signals is estimated at \$86 Million. If the City replaces 5 signals at \$5 Million per year will take 22 years to complete the replacements. Eventually it will be very difficult to continue maintaining the signals needing replacement for that long of a period of time. The typical life of a traffic signal is approximately 25 years. Therefore, it is recommended that the funds be budgeted to replace at least 4 traffic signals per year starting FY 2026/27.

Project Evaluation and Analysis

Failure to replace these traffic signals in a timely manner will result in a breakdown of traffic signal equipment with no means of quick replacement of shut down or broken parts, as these obsolete parts may not be readily available in the market. Unexpectedly longer signal shut downs, which will seriously disrupt the traffic on the City's roadway network resulting in longer delays for all roadway users.

Fiscal Impact

As funding opportunities present themselves, individual projects will be brought before the Council for consideration and budget appropriation. The project could be funded by the Gas Tax Fund.

Funding Sources

General Fund and Gas Tax Fund

901206 - Peery Park Sense of Place

Originating Year:	2018	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

On September 20, 2016 Council approved the Peery Park Specific Plan. The plan calls for developers to pay \$2.41/net new square feet of development to be put towards the Peery Park Sense of Place.

Project Evaluation and Analysis

The Peery Park Sense of Place fees will cover Pastoria Avenue streetscape improvements (double-head decorative LED streetlights, 24" box trees at 30' spacing, and a 22' wide stamped concrete plaza area, and new/improved bicycle lanes, and up to 10 crosswalks with in-roadway warning lights). In addition, 10 shuttle stops are anticipated to be funded out of this project.

Fiscal Impact

It is anticipated that developments may include the construction of most of these items. However, should a development project include the infrastructure, the sense of place fees would be collected for the City to provide a capital project. The City would likely only do a project to fill gaps in the improvements. Funding shown is maximum anticipated should all developers pay instead of construct.

Funding Sources

Developer contributions: Peery Park Sense of Place Fee

THIS PAGE IS INTENTIONALLY BLANK

DOWNTOWN

THIS PAGE IS INTENTIONALLY BLANK

The revitalization of Downtown Sunnyvale is continuing, and progress is being made in several areas. The renewal of the area's vitality results from concentrated efforts and a commitment to making Downtown a strong, viable city center.

Funding for the Downtown projects comes from several sources. These include the General Fund, a portion of the proceeds from the sale of City land to the developer of the CityLine site, parking district assessments, Traffic Impact Fees, and the Redevelopment Property Tax Trust Fund.

MAJOR DOWNTOWN PROJECTS

Downtown Parking District Major Maintenance. Approximately \$1.5 million has been budgeted over the twenty-year plan to provide for major maintenance of the Downtown Parking District. Specifically, funds will be used to install gutters and rehabilitate existing pavement in the downtown lots and for various maintenance activities, including periodic asphalt patching, slurry sealing, curb painting, sign replacement, and re-striping as necessary. This project will coordinate with completing major improvements in the downtown area, including private development.

Murphy Avenue Pedestrian Mall Improvements. The project is located within an existing commercial area - the 100 block of Murphy Avenue, where the street life has historically included outdoor sidewalk dining and periodic special events. City Council has designated this commonly known "Historic Murphy Ave" as a pedestrian mall on May 16, 2023. The project will design accessibility improvements and modifications to the pedestrian mall to facilitate the operation of the street dining program and provide a link between the Caltrain station and downtown's commercial core to encourage the use of Caltrain.

Sunnyvale Avenue Median from Iowa to Washington. The Downtown Specific Plan calls for constructing a landscaped median on Sunnyvale Avenue, and this project provides for the City's share of construction costs from Iowa Avenue to Washington Avenue. The City's contribution is half the construction cost, not-to-exceed \$1,000,000, and is funded from the Town and Country land sale proceeds. The developer of the Town Center site will construct the improvement and fund the remainder of the project. The timing of this project is dependent upon the Town Center redevelopment project.

Downtown Wayfinding and Gateways. As the downtown area continues to develop, a signage program was created to improve aesthetics and promote economic vitality. Approximately \$1.7 million has been budgeted over the long-term plan to highlight and identify the major entry points into the downtown area. Installing wayfinding signage will help identify the downtown area and its importance and help guide patrons with safe travel in and around the area.

Downtown Association. This project supports the Sunnyvale Downtown Association with an annual allocation of \$100,000 through FY 2028/29, and \$40,000 thereafter. The funding supplements the Business Improvement District revenue and provides special event and enhanced marketing efforts for the downtown area. [More information on this project can be found in the project information sheet under the Outside Group Funding section.](#)

Murphy Avenue Solid Waste Enclosures. This new project will fund the evaluation of appropriate locations and impacts of Murphy Avenue (Downtown) waste enclosures. The project also includes the enclosure design, permitting, and construction. [More information on this project can be found in the project information sheet under the Solid Waste section.](#)

826701 - Town Center Investigation/Remediation of Hazmat (MRADDOPA)

Originating Year:	2017	Project Type:	Downtown	Department:	250 - Public Works
Planned Completion Year:	2032/33	Category:	Capital	Project Manager:	Arnold Chu

Project Description/Scope/Purpose

This project provides for the environmental remediation work at Town Center. The scope of the project includes investigation, remedial design, monitoring wells, soil-vapor extraction, groundwater treatment, Remedial Action Plan, compliance, legal fees, and related costs. The Sunnyvale Redevelopment Successor Agency (RSA) share of these costs are defined under the terms of 2016 Modified and Restated Amended Disposition and Development and Owner Participation Agreement (2016 MRADDOPA). This Agreement updates and amends the 2010 Amended Disposition and Development and Owner Participation Agreement (2010 MRADDOPA). The 2016 MRADDOPA reduces the RSA obligations related to environmental remediation upon conveyance of Block 6 to the Developer no later than October 1, 2022. The City is still obligated to share costs for ongoing remediation associated with Lot 2 of Block 5.

Project Evaluation and Analysis

The soil and water remediation activities are ongoing and in accordance with the Remedial Action Plan approved by the Regional Water Quality Board. The City has proceeded with implementing the accepted Action Plan.

Fiscal Impact

This project is funded by Redevelopment Property Tax Fund allocations and has been recognized as an enforceable obligation by both the Redevelopment Successor Agency Oversight Board and the State Department of Finance.

Funding Sources

Redevelopment Successor Agency Trust Fund

Plans and Goals

826790 - Sunnyvale Avenue Median from Iowa Avenue to Washington Avenue

Originating Year:	2007	Project Type:	Downtown	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Capital	Project Manager:	Arnold Chu

Project Description/Scope/Purpose

This project provides the City's share for construction of a landscaped median on Sunnyvale Avenue from Iowa Avenue to Washington Avenue. This project is subject to the 2016 Modified and Restated Amended Disposition and Development and Owner Participation Agreement (2016 MRADDOPA), which amended the 2010 Amended Disposition and Development and Owner Participation Agreement (2010 ADDOPA). The agreement requires the developer of the Town Center to fund a portion of the cost to construct the improvements, at a total estimated cost of \$2,000,000. The City's cost contribution is half the actual construction cost, not-to-exceed \$1,000,000.

A reimbursement agreement with the developer has been executed.

Project Evaluation and Analysis

The Downtown Specific Plan calls for the construction of a landscaped median on Sunnyvale Avenue. Construction between Iowa Avenue and McKinley Avenue was completed in FY 2019/20. It is anticipated that the remaining portion will be completed when development on Block 6 occurs.

Fiscal Impact

This project is funded by the Capital Improvement Projects Reserve in the General Fund.

826800 - Downtown Wayfinding and Gateways

Originating Year:	2007	Project Type:	Downtown	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide for the installation of coordinated signs and gateway features that provide a unified and clear signage program to navigate to and within the downtown area. The purpose is to highlight and demark the major entry points into the downtown area to identify this area as an important and distinctive part of the community.

As the downtown area is revitalized and evolves with new development and more uses, this signage program will improve the aesthetics and promote economic vitality. This will be accomplished with three related elements:

(1) wayfinding signage within the downtown which requires the installation of signs that will direct the public to parking and major features within the downtown area;

(2) wayfinding signage to guide the public to the downtown, which requires directional signs to be installed along major roadways such as Sunnyvale-Saratoga Road, Mathilda Avenue and El Camino Real; and,

(3) gateway markers at key entry areas announcing the arrival into the downtown area. Three primary markers at Mathilda/Washington, Mathilda/El Camino Real, and Sunnyvale/El Camino Real are at the boundaries to the downtown. A fourth gateway feature, located at the Mathilda/Sunnyvale-Saratoga Road split, would direct traffic toward downtown. Gateways may be large pylons, arches, signs, or other similar features to catch the eyes of motorists signaling arrival to the downtown area. Once installed, the Wayfinding and Gateway items are expected to last twenty years, with replacement needed due to wear and tear, graffiti, and damage.

On June 15, 2021, City Council voted to move this project out two years. The new completion date is FY 2025/26. On September 13, 2022, City Council approved Updated Design Vocabulary and Option 3 for Gateway Signs in Downtown. Preparation of design Request for Proposal started FY 2024/25.

Project Evaluation and Analysis

Signage will help identify the area and its importance, and help potential patrons find their way to and within the area. Higher patronage downtown is good for the economic vitality of the area, resulting in higher retail sales tax.

Fiscal Impact

This project is funded by the Capital Improvement Projects Reserve in the General Fund.

827570 - Downtown Parking District Major Maintenance

Originating Year:	2008	Project Type:	Downtown	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for maintenance of the Downtown Parking District. Funding will provide for various maintenance activities including, prep work prior to resurfacing, slurry seal resurfacing, curb painting, sign repairs and replacement, concrete repairs, asphalt concrete repair or resurface, parking lot and pathway lighting replacement and re-striping as necessary.

The parking lots that are maintained by this project are as follows:
Frances Parking Lot - Frances Avenue at Evelyn Avenue
Sunnyvale Parking Lot - Sunnyvale Avenue at Evelyn Avenue
North Carroll Parking Lot - Carroll Street at Evelyn
South Carroll Parking Lot - Carroll Street at McKinley Ave.

The parking lots were treated in FY 2017/18 and were on a six-year cycle for treatment.

North Carroll and Frances Street parking lots received slurry seal treatments in FY 2024/25. Sunnyvale and South Carroll parking lots are tentatively scheduled to receive slurry seal treatments at the end of FY 2024/25. This will use both city staff hours, materials, as well as contract work.

The funds in FY 2029/30 are for design for the next cycle of work for parking lots. The construction includes Frances Avenue parking lot, and North Carroll parking lot in FY 2030/31, and the remaining Sunnyvale Avenue parking lot and South Carroll parking lot and Evelyn Avenue scheduled in FY 2031/32.

The funds in FY 2035/36 are for design in the out years for parking lots Frances Avenue parking lot and North Carroll parking lot. Constructions is scheduled for FY 2036/37, and the remaining lots are scheduled as follows: Sunnyvale Avenue parking lot (FY 2037/38), and South Carroll parking lot in FY 2038/39.

Project Evaluation and Analysis

The Parking District Fund is a small fund that provides for the ongoing landscape and maintenance of downtown parking lots through assessments on property owners within the district. This project is for the maintenance and warranted repairs needed for the downtown area. Accomplishing this maintenance effort on the parking lots will improve the aesthetics of the entire downtown.

Fiscal Impact

This project is funded by the Parking District Fund. Maintenance improvements of the downtown parking lots are funded entirely by the Downtown Parking District assessment paid by downtown businesses.

Funding Sources

Parking District Fund

836660 - Murphy Avenue Pedestrian Mall Improvements

Originating Year:	2022	Project Type:	Downtown	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Michaela Donahue

Project Description/Scope/Purpose

The 100 block of Murphy Avenue (commonly known as “Historic Murphy Ave”) was established as a pedestrian mall on May 16, 2023 by City Council. This project will be designing accessibility improvements and modifications to the pedestrian mall to facilitate operation of the street dining program. Based on recommendations from completed accessibility reports, the project will be constructing 4 new ADA curb ramps, replacement of drainage grates to ADA-compliant grates, installation of a paver delineated ADA pathway, installation of additional bollards, modification of roadway striping at Washington and Evelyn intersections and various other miscellaneous improvements .

Project Evaluation and Analysis

Staff surveyed the community and businesses, used social media to announce the potential closure to vehicles, and presented several times at Sunnyvale Downtown Association (SDA) meetings. Feedback from the community and businesses showed strong support for banning vehicles on Historic Murphy Avenue and creating a permanent pedestrian mall. The construction needed to implement the pedestrian plaza, such as installation of bollards and pavement modifications or additional curb cuts, is within the scope of normal operational activities and streetscape improvements anticipated by the Downtown Specific Plan (DSP). The pedestrian mall also furthers the two main goals of the DSP’s North Washington District (DSP Section 5.4.2), which are to support a “lively street life” along the Historic Murphy Avenue, and to provide a link between the Caltrain station and the Downtown’s Commercial Core to encourage use of Caltrain.

Additionally, the proposed pedestrian mall project has been reviewed using an environmental checklist. The analysis in the checklist concludes that the proposed pedestrian mall is not a substantial change from the types of uses and activities that were analyzed in the previously certified program Environmental Impact Report. The project is located within an existing commercial area where the street life has historically included outdoor sidewalk dining and periodic special events.

Fiscal Impact

The project is funded out of the Capital Projects - Community Benefits Fund. The project will cost \$800,000. It is anticipated that \$700,000 will be for design and construction, and additional \$100,000 is allocated for the potential design and construction of some items requested by Council outlined in RTC 23-0359.

The City currently spends about \$50,000 annually cleaning the sidewalks and streets. Additionally, cleaning waste from the crows requires additional staff time and resources to keep the sidewalks and street clean. It is expected that this level of service would be ongoing.

THIS PAGE IS INTENTIONALLY BLANK

HOUSING

THIS PAGE IS INTENTIONALLY BLANK

The City's housing projects are designed to address the affordable housing goals of the 2023-2031 Housing Element of the City's General Plan and other City plans and policy documents related to affordable housing. The Combined Housing Fund, Grant Program Funds, and the Housing Successor Agency Low-Moderate Income Housing Fund fund housing projects in this section.

The Combined Housing Fund includes several types of special housing revenues, each deposited into a separate sub-fund: the Housing Mitigation sub-fund, consisting of Housing impact fees on non-residential and rental housing projects, as well as prior loan payment revenues; and the Below Market Rate Housing sub-fund, consisting of in-lieu and administrative fees. The Low-Moderate Income Housing Fund includes special revenues available only for affordable housing projects. State statutes govern the use of those funds, so all expenditures and projects are designed to comply with those State laws.

The Grant Program Funds include the Combined Community Development Block Grant Fund, the Permanent Local Housing Allocation Grant Program Fund, and the HOME Fund.

MAJOR HOUSING PROJECTS

Housing Element Update. This project provides funding for consultant services to support the preparation of the Seventh Cycle (2031-2039) Housing Element, which is due in January 2031. State law requires jurisdictions to update the Housing Element of their General Plan every eight years, subject to review and certification by the California Department of Housing and Community Development. The City anticipates initiating the update process in FY 2029/30. This project includes funding for the Seventh Cycle update in FY 2029/30 and preliminary funding for the Eighth Cycle in FY 2037/38.

Homeless Prevention and Rapid Re-Housing. This project is funded through the Redevelopment Housing Fund, following State law, which permits housing successor agencies to allocate up to \$250,000 annually through FY 2032/33 for programs assisting individuals at risk of or experiencing homelessness. The program is modeled after a federal initiative from the American Recovery and Reinvestment Act previously implemented in Sunnyvale. It aims to prevent homelessness or help households quickly secure new housing through security deposit assistance and short-term rental support, typically within two months. The program may also provide credit repair and legal services. The City contracts with a qualified nonprofit service provider to administer the program. Ongoing funding will need to be identified beyond FY 2032/33 if the program is to continue once Redevelopment funds are exhausted.

Orchard Gardens Apartments Redevelopment. The Housing Authority of Santa Clara County has recently taken over the Orchard Gardens redevelopment project, located at 245 W. Weddell Drive. The project includes demolition of existing units and new construction for over 120 on-site units, and \$10 million in City HMF funding will be provided as a 55-year loan. The City will restrict the completed project as affordable housing for a 55-year term. A funding extension through 2026 is currently under review, and this project will be updated accordingly.

295 S. Mathilda. This project is a proposed 126-unit affordable rental housing development by MidPen Housing. 125 units will be affordable for lower-income households, including 32 units reserved for formerly unhoused individuals. One unit will be reserved for an on-site property manager. The total project cost is estimated at \$119 million. The City purchased the 1.05-acre site for \$7.35 million; approved \$1.5 million in predevelopment funding through the 2024 NOFA. These funds will support architectural and design work, planning approvals, and efforts to secure additional financing for the project.

352 E. Java Drive. It is a proposed 308-unit affordable rental housing project developed by Pacific Companies and Miramar Capital. Of the total units, 305 will be affordable to low-income households, and three will be unrestricted manager's units. The total development cost is estimated at \$208 million. As part of the City's 2024 NOFA, the City Council approved a conditional award of \$14 million in Housing Mitigation Funds. The funds will be disbursed as a loan to support construction and related development costs.

PLHA Unhoused Services. This project provides rental assistance and related support services for unhoused individuals in Sunnyvale. The City has allocated multiple years of Permanent Local Housing Allocation (PLHA) funding to support this program, totaling approximately \$1.5 million. This amount is subject to adjustment based on final PLHA allocations from the California Department of Housing and Community Development. Funds are reserved for general unhoused support services and will be allocated to specific projects at the discretion of the City Council. Potential uses include overnight warming locations, case management for safe RV parking programs, street outreach services, and transitional shelter programs.

823750 - BMR Compliance Enforcement

Originating Year:	2002	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Ernie DeFrenchi

Project Description/Scope/Purpose

The Below Market Rate (BMR) Compliance Enforcement project funds the services of an independent investigative firm, independent counsel on bankruptcy and foreclosure matters, and litigation to force the sale of a BMR property. These activities are required to enforce compliance of the BMR Purchase Program. Occasionally, a BMR unit will have a compliance issue that cannot be solved by City Housing or City staff, or may be an issue requiring further investigation. These funds allow the City to fund either an outside investigator or legal consultant to assist in resolving any compliance issues.

Project Evaluation and Analysis

This project ensures the primary program requirement of the BMR program, continued occupancy of a BMR unit as the principal residence of the owner, is met. BMR Compliance issues arise from time to time, and may range from 0-2 per year. Enforcement matters may range from funding that is needed to send notices, to the hiring of private investigators, legal support, or even real estate brokers to support the City on particular enforcement matters.

Fiscal Impact

This project is funded by the BMR sub-fund. Future revenues are unlikely to be associated with this project, however, if the City does have to retain ownership of a unit, any sales proceeds will return to the City's BMR fund. The current project budget holds a sum of funding for future needs, no annual funding is allocated. Therefore, carryover of this fund is requested on an annual basis as long as funding remains. Due to the nature of BMR enforcement, the City can not necessarily plan on the time at which these funds will be needed, but this project allows quick access to funds in an urgent enforcement scenario.

826520 - Pre-Development Costs on Affordable Housing Sites

Originating Year:	2007	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

Project funds can be used when the City is seeking to purchase land (appraisals, studies, staff support in other departments, etc.) or can be available for emergency situations or tight deadlines with our affordable housing partners.

Project Evaluation and Analysis

Project will provide funding for a variety of needs when it comes to pre-development of affordable housing on City-owned or nonprofit developer owned land. Types of items that may need this funding include, but are not limited to: studies needed to determine if a housing project is feasible or requires alternatives or modifications, appraisals, urgent maintenance or security needs, urgent funds needed to close or meet deadlines that are minor in nature, inspections, etc. The funds will be issued by request from a developer or at the request of the City to pay for these items as needed.

Fiscal Impact

This project is funded by the Housing Mitigation Fund. These funds remain in this project to be used as projects arise. Because the timeframe to purchase property or provide studies is so limited, this funding source allows the City or partner developers to quickly fund required studies or complete urgent tasks. This project does not receive revenue. Funds are requested to be carried from year to year as needed to ensure a balance is available. Examples of costs that may come from this project include: appraisals, emergency repairs, security needs, maintenance needs, etc.

826530 - County-Wide Homeless Count

Originating Year:	2017	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

This project funds the costs to pay for the City's share of conducting a biennial county-wide homeless count and survey. This homeless count and survey is a federally mandated initiative for Santa Clara County. As agreed, each jurisdiction within the County shall contribute a pro-rata share of the cost to conduct the survey based on their population size. The count is conducted in January of every odd year and the County hires a consultant to prepare the final report and compile all data. Once the report is published, it provides background information for each City to assist with homeless programs but mainly serves as a funding tool for the County's federally funded programs.

Project Evaluation and Analysis

The support of the City's fair share by population of the cost of the homeless survey provides substantial benefit to the homeless residents in Sunnyvale and throughout the county. It provides a key tool that allows public service agencies access to federal grant dollars to support services to the homeless and established metrics to progress homeless programs and populations. The County oversees the entire process.

Fiscal Impact

The project is funded by the Housing Mitigation Sub-Fund and is critical for continuation of our annual Housing and Urban Development (HUD) Grant appropriations. In addition, in order for the County to continue to receive McKinney-Vento funds, the County is mandated to conduct a County-wide homeless count every two years.
Phase 2 FY26: As some responsibilities are being shifted from County to City, extra funding is approved for future years.

828100 - First-Time Homebuyer Loans

Originating Year:	2017	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Ernie DeFrenchi

Project Description/Scope/Purpose

This project allocates Below Market Rate (BMR) In-Lieu funds from the Below Market Rate Housing Sub-Fund for the First Time Homebuyer Program, to be used for down-payment assistance loans to eligible households (at or below 120% Area Median Income) for purchase of eligible homes in Sunnyvale. These loans commonly assist households purchasing BMR units developed through the City's Inclusionary Housing Program. The City underwrites each loan and awards between 4-5 loans annually. For specific details on the loans offered or income qualifications, please refer to the current First Time Homebuyer Program Guidelines.

Project Evaluation and Analysis

This project is an ongoing program offered by the Housing Division to assist income qualified households in purchasing their first home. Typically, between 4-5 loans are awarded annually, with a maximum loan amount of \$50,000. Payments on these loans are captured in the City's BMR Housing Sub-Fund.

Fiscal Impact

This project has \$250,000 programmed annually through FY 2024/25 from the BMR Housing Sub-Fund. The funds will be expended by making deferred loans that will be paid back to the Housing Mitigation fund upon the occurrence of certain events that trigger the maturity date, such as sale or transfer of the home securing the loan. This use of BMR In-Lieu funds is consistent with City policy for use of Housing Funds.
FY26 Phase 2: Approved \$250K each year FY26 - FY35.

828750 - Tenant Based Rental Assistance (HOME)

Originating Year:	2010	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

Tenant Based Rental Assistance (TBRA) programs are very similar to the federal "Section 8" housing voucher program, but are funded with HOME Investment Partnerships Program (HOME) rather than with federal Section 8 housing funds, which are provided to housing authorities, not to cities. Funds are limited for 2 years program. This project allocates HOME funds to Sunnyvale Community Services (SCS) to administer a tenant-based rental assistance and security deposit assistance program for City residents experiencing or at imminent risk of homelessness. The City executed its initial agreement with SCS in July 2022 as outlined in the HUD Annual Action Plan.

Project Evaluation and Analysis

This project addresses the priorities and goals described in the Consolidated Plan, specifically "Alleviation of Homelessness." Sunnyvale Community Services (SCS) enrolls homeless individuals in the TBRA program as funding allows. The funds are only available to each household for 2 years with the goal of the household slowly working towards paying market rate or waiting on an affordable housing waitlist while enrolled in the TBRA program. Staff continuously monitors SCS to ensure households are successfully transitioning from the program into being more financially independent and ensures that SCS is forming strong partnerships with local landlords.

Fiscal Impact

This project is contingent on Housing and Urban Development (HUD) grant appropriations. This project is funded by the HOME Grant Fund and this use of HOME funds is consistent with federal regulations. Funds go towards a program which provides direct rental subsidies, deposit support, case management, administrative support, and more as outlined clearly in a funding contract with the program administrator. With HOME funds remaining very flat and rental expenses increasing, it is likely this program will enroll fewer clients as time goes on. The City will continue to seek other funds to help backfill this program if needed.

Funding Sources

HOME Grant Fund

831761 - Homeless Prevention and Rapid Re-Housing (HPRR)

Originating Year:	2017	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project is funded by Redevelopment Agency (RDA) Low-Moderate Income Housing (LMH) funds which had been deferred in prior years. Recently enacted state law allows post-RDA Housing Successor Agencies (HSA) to spend up to \$250,000 in LMH annually for Homelessness Prevention and Rapid Re-Housing (HPRR) programs. HPRR programs are based on a Federal program launched as part of the 2009 Recovery Act (ARRA) that was also successfully implemented in Sunnyvale. HPRR programs assist homeless clients and those at imminent risk of losing their housing by providing direct financial assistance for costs to maintain or obtain housing, such as short-term rental assistance (3-18 months), security and/or utility deposits, utility payments, last month's rent, or moving costs; as well as services such as housing search, mediation, credit repair, case management, and other appropriate services. Sunnyvale Community Services is implementing this program. Continuing this project beyond the terms in the proposed budget is contingent on future revenue in the Low & Moderate Income Housing Fund. The funds and the project are currently being managed by the City's TBRA administrator.

Project Evaluation and Analysis

This project complies with current state law that regulates agencies' use of LMH funds. The project addresses the goals in the City's Housing Element and Housing and Urban Development (HUD) Consolidated Plan to alleviate homelessness. Homelessness has become an increasing urgent concern in the City as the rental market has become extremely competitive and many residents have found themselves suddenly without housing due to steep rent increases, an inability to locate another affordable rental unit, or for various other reasons.

Fiscal Impact

This project is funded by the Low & Moderate Income Housing Fund in the amount of \$250,000 annually through FY 2031/32. As Redevelopment LMH funding is finite, additional funding will need to be identified when Redevelopment funding is no longer available if this service is to continue.

Funding Sources

Low & Moderate Income Housing Fund

832030 - Orchard Gardens Apartments Redevelopment

Originating Year:	2020	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

The Housing Authority of Santa Clara County has recently taken over the Orchard Gardens redevelopment project, located at 245 W. Weddell Drive. The project includes demolition of existing units and new construction for over 120 units on site. The \$10 million in City HMF funding will be provided as a 55-year loan. The completed project will be restricted by the City as affordable housing for a 55-year term. A funding extension through 2026 is currently under review and this project will be updated accordingly.

Project Evaluation and Analysis

This project is consistent with the goals and objectives in the City's General Plan Housing Element. The requested funding commitment for the project was recommended by the HHSC and approved by Council in early 2020. FCH has experience developing housing for developmentally disabled tenants in partnership with several local service providers, including Housing Choices Coalition. Upon completion, the majority of units will be restricted and affordable to households with extremely low to low incomes, with one manager's unit. The funding commitment will not be finalized until the project receives the required development permits (entitlements) from Planning. Funding commitment is good through 2024 with extension under review.

Fiscal Impact

The project is funded by the Housing Mitigation Fund, which exists for the purpose of funding affordable housing projects such as the redevelopment of Orchard Gardens. The final funding commitment of \$10M is contingent upon completing the standard funding conditions as provided to the developer. Future uses of this funding will go towards demolition, renovation and construction of these 123 affordable units on site. Council approved the \$7.5 million conditional commitment of Housing Mitigation funds for this project on February 25, 2020 and \$2.5M on October 25, 2022, for a total City commitment of \$10M.

835190 - Updates to the Single-Family Home Design Techniques Document

Originating Year:	2020	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

Study Issue CDD 20-01 will update the single-family design techniques. The design techniques have been a useful tool in reviewing the design of single-family homes; however, the Planning Commission has requested more specificity and potentially additional guidelines, which establish clearer quality standards for the City. Additionally, the Planning Commission has requested more objective standards when related to architectural consistency and to address modifications to single-family homes based on innovative architecture. This Study to update the single-family design techniques will be a large planning effort, and will include:

- Evaluation of the existing Design Techniques and style expectations;
- Discussion with staff who commonly work on design review applications to learn what standards work well, and which need updating;
- Working with a consultant to develop new guidelines or criteria, to expand existing guidelines, and to ensure the guidelines are objective (when feasible);
- Consider how to include sustainable concepts and aspects into design review;
- Multiple outreach meetings with the community and single-family home architects and designers; and
- Surveying other cities to compare design techniques/guidelines.

Funds have been utilized to hire a consultant who specializes in Design Guidelines and Standards to help evaluate and update the existing design techniques and finalize the format.

Project Evaluation and Analysis

As a result of recent changes in State law (Senate Bill 330), the City must rely on objective development and design standards for single-family homes, similar to our efforts for multi-family (Citywide). As many of the Single-Family Design Techniques are currently subjective, the City will utilize grant funding to update design techniques and develop new objective design standards.

Fiscal Impact

This project was funded through the Development Enterprise Fund.

835720 - 2023 Housing Element Update

Originating Year:	2021	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

The Local Early Action Planning (LEAP) Grant awarded to the City of Sunnyvale in the amount of \$500,000 will cover three projects led by Community Development Department (CDD).

2023-31 Housing Element of the General Plan
Provides funding to have a consultant assist City Staff with the preparation of the upcoming Sixth Cycle of the Housing Element. The City must update its Housing Element every eight years. The Housing Element was adopted in March 2024.

Village Centers Master Precise Plan
Village Center Master Plan is developed for helping all individual Village Centers. This project provides funding to be used for consultant services as well as staff required for the creation of the new development standard and design guidelines.

Santa Clara County Planning Collaborative
Cover the City's fair share of its ongoing participation in the Santa Clara County Planning Collaborative. This is complete.

Project Evaluation and Analysis

2023-31 Housing Element update project funds technical assistance, preparation and adoption of planning documents, and process improvements to accelerate housing production and facilitate compliance to implement the sixth cycle of the regional housing needs assessment. The Housing Element componenet of this budget project is complete.

The Village Centers Master Precise Plan project provides funding for consultant services and staff time required for the creation of the new development standards and design guidelines required by SB 330, will aid in streamlining the approval process for the development of individual Village Centers, and accelerate housing production in areas at major intersections currently zoned Neighborhood Commercial and Office.

The Santa Clara County Planning Collaborative project funds consultant support to facilitate and lead the effort to encourage Countywide collaboration on housing production and legislation efforts, including preparation for the 2023-2031 Housing Element. This portion of the project is compete.

Fiscal Impact

This project is funded through Local Early Action Planning Grant, and supplemented by Regional Early Action Planning Grant (REAP) and CA HCD's PGP Grant (FY24 YE budget mod).

Funding Sources

State of California LEAP and PGP Grants, and ABAG's REAP Grant

835810 - Code Enforcement Activities to Address Substandard Residential Properties

Originating Year:	2021	Project Type:	Housing	Department:	110 - Office of the City Attorney
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Rebecca Moon

Project Description/Scope/Purpose

In November 2021, Council adopted an ordinance to recover attorney's fees and costs associated with bringing legal action to court to file for receiverships to address substandard residential properties. Project funding will be used to fund outside counsel fees related to other enforcement actions.

Project Evaluation and Analysis

If the program is successful, additional reimbursements will continue funding these activities.

Fiscal Impact

Initial project funding through reimbursement related to this activity from a completed receivership and will be funded by future completed enforcement actions.

12/13/2024: Litigation cost recovery in the amount of \$91,940 was received in FY24. Project shows a negative balance due to system limitation preventing cost offset to go from AR to PPM and Questica. Future reimbursements/litigation recoveries will be recorded to NA 434272 and fall into the General Fund balance to indirectly offset project expenditures. Finance will review this project as part of the Budgetary Year End/Budget Modification process.

835820 - Temporary Housing for Unhoused Individuals

Originating Year:	2021	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

The City will provide services for the homeless population in Sunnyvale. Services may include a partnership with non-profit agencies as well as the County of Santa Clara. The goal is to provide outreach services to include case management for the homeless to assist them in receiving financial services and short as well as long-term housing opportunities as well as shelter beds. In addition, case management could include resources that provide additional resources such as medical care and employment preparation through our non-profit partners as a couple of examples.

Project Evaluation and Analysis

The City has identified the number of unhoused individuals and is tracking whether they have been contacted for case management support and services. We are also tracking the number of unhoused individuals participating in the types of services offered, which will assist us in identifying program success. For example, contacted individuals who accept shelter beds or other housing opportunities are another measure of program success.

Fiscal Impact

Initial funding of \$500,000 from the General Fund for this pilot program with a one year extension at \$500,000 for continued case management support and shelter beds and to continue with the current model through HomeFirst. Total funding is \$1,000,000 for the project.

836480 - Carroll Street Inn Rehabilitation

Originating Year:	2023	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

This project has been allocated \$500,000 for the purpose of rehabilitating an existing multi-family community, the Carroll Street Inn, which was built in 1994. The community consists of 122 Single Room Occupancy (“SRO”) units, including a manager’s unit, and primarily serves very-low-income households. The rehabilitation efforts will focus on several areas, including the replacement of common area floors, upgrading common area kitchens to be ADA accessible, and improving certain kitchenettes in individual rooms. Additionally, includes the installation of solar panels to improve energy efficiency and enhancing the current security system. Funding for this project is anticipated to be released in loan form in Spring 2025.

Project Evaluation and Analysis

MidPen, the organization responsible for managing the property, has full site control and is ready to move forward with the rehabilitation project. the project has a sound operating budget and has complied with affordability requirements and regulatory audits throughout the life of the project. The funds allocated for this project will be used to cover the costs associated with the rehabilitation efforts. The goal of this project is to improve the living conditions for the residents of Carroll Street Inn and ensure that the community remains a safe, affordable, and sustainable place to call home.

836490 - 1171 Sonora Court Predevelopment of Affordable Housing

Originating Year:	2023	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2030/31	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

1171 Sonora Court is a proposed 172-unit affordable rental housing project developed by MidPen Housing. 170 units will be affordable to lower-income households with 34 of those units designated for formerly unhoused residents. Two units will be unrestricted manager's units. The total development cost for the project is estimated to be approximately \$183 million.

In 2022, City Council approved a \$500,000 funding award for predevelopment activities through the City's 2022 Notice of Funding Availability (NOFA) (RTC 22-0973). The City funded this award using Permanent Local Housing Allocation (PLHA) funds. These funds were used to begin architectural plans for planning entitlements.

In 2024, City Council approved an additional funding award to purchase the 1.3-acre 1171 Sonora Court property for \$12,500,000 and to provide additional predevelopment funds in the amount of \$1,533,000 as part of the City's 2024 NOFA (RTC 24-0863). The City will purchase the property from MidPen and enter into a long-term ground lease with MidPen upon construction commencement. Predevelopment funds will be used to complete architectural and design drawings and to fund property holding costs. These funds will allow MidPen to pursue additional financing for the project and secure planning entitlements.

Project Evaluation and Analysis

The project is in the predevelopment stage. The City's 2022 award of \$500,000 in predevelopment funds was used to reimburse MidPen for soft costs such as engineering and design/architecture. MidPen submitted a formal application for planning entitlements in December 2023.

The City's 2024 award is used to acquire the property for \$12,500,000 from MidPen in December 2024. There is also a Disposition and Development Agreement which sets the terms of the development of the project and provides a loan of \$1,533,000 in predevelopment funds. These funds will be disbursed to MidPen as a loan upon the City's acquisition of the property. Additional architectural and design work will be completed with these funds to finalize planning entitlements. Planning entitlements are expected to be secured by Summer 2025. The City will enter into a long-term ground lease with MidPen upon construction commencement, which is expected by spring 2028. Construction would be completed within approximately two years.

Fiscal Impact

Council approved \$500,000 in predevelopment funding in RTC 22-0973. Permanent Local Housing Allocation (PLHA) funds were used in place of Housing Mitigation Funds (HMF) per RTC 24-0467. Funds were disbursed as a loan to MidPen in June 2024. Council also approved a total of \$14,033,000 in funding in RTC 24-0863. Housing Mitigation Funds is the funding source for this award. The total award includes \$12,500,000 for acquisition of the property and a loan of \$1,533,000 for predevelopment work. Funds are disbursed in December 2024.

836540 - Consider Increasing Inclusionary Housing Requirement to 20% in New Residential Developments

Originating Year:	2023	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

Study Issue CDD 23-01. This study issues features a feasibility study that will be prepared to identify whether increasing the City's inclusionary housing requirement from 15% to 20% for both for-sale and rental housing will allow the City to capture additional affordable units and make progress towards meeting the Regional Housing Needs Allocation. This study will also analyze in-lieu fee amounts. Depending on the outcome of the feasibility study, an updated ordinance would be prepared to increase residential inclusionary percentages as identified. The City would ensure adequate legal review is included in this ordinance revision because of the new level of review by the State.

Project Evaluation and Analysis

A consultant will be hired to prepare the feasibility study and fee analysis. Pending the consultant study, a study session with the Council will be held. The City's Inclusionary Ordinances and Fee Schedules will be updated accordingly based on final action. Study is anticipated to be completed in summer 2025.

Fiscal Impact

\$225,000 in General Funds has been approved to cover the cost of the Consultant for this work effort. Should affordable housing in-lieu fees be increased based on the study, additional housing revenue is anticipated.

836700 - 295 S. Mathilda

Originating Year:	2023	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2029/30	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

295 S. Mathilda is a proposed 126-unit affordable rental housing project developed by MidPen Housing. 125 units will be affordable to lower-income households with 32 of those units designated for formerly unhoused residents. One unit will be an unrestricted manager's unit. The total development cost for the project is estimated to be approximately \$119 million.

In 2023, the City purchased the 1.05-acre property at 295 S Mathilda with \$7,350,000 in Housing Mitigation Funds with the intention of developing the property for affordable housing (RTC 23-0770). Upon purchase of the property, the City entered into a short-term lease and an Exclusive Negotiating Agreement with MidPen Housing for the development of the project.

In 2024, City Council approved a funding award to provide predevelopment funds in the amount of \$1,500,000 as part of the City's 2024 NOFA (RTC 24-0863). Predevelopment funds will be used to prepare architectural/design drawings to secure planning entitlements and pursue additional project financing. Predevelopment funds will be disbursed as a loan of Housing Mitigation Funds.

Project Evaluation and Analysis

This project is currently in the predevelopment stage. The City successfully acquired the property in 2023 and entered into a ground lease and Exclusive Negotiating Agreement (ENA) with MidPen Housing. Per the terms of the ENA, MidPen has commenced community engagement, completed preliminary Planning review, and conducted a financial analysis within 12 months of entering into the ENA.

The City intends to enter into a Disposition and Development Agreement with MidPen for the development of the project in Q1 of 2025, per the terms of the ENA. As part of the DDA, the City will disburse the \$1,500,000 predevelopment loan, which will be used to support architectural and design work. MidPen will submit a formal application for planning entitlements in spring 2025. The City will also enter into a long-term ground lease with MidPen upon construction commencement. Construction commencement is expected in summer 2027 and would be completed within approximately two years.

Fiscal Impact

Council approved \$7,350,000 in Housing Mitigation Funds for the purchase of the property in RTC 23-0770. The City acquired the property for around \$7.3M in September 2023.

Council also approved a total of \$1,500,000 in Housing Mitigation Funds (Below Market Rate In-lieu Sub-Funds) for predevelopment costs in RTC 24-0863. Funds will be disbursed when the City enters into a Disposition and Development Agreement with MidPen, which is expected in Q1 2025.

Funding Sources

Housing Mitigation Fund and Other Housing Related Fund.

836840 - Safety Net Shelter Operating Support

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Outside Group Funding	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

PLHA funds will provide operating support in the amount of \$48,500 for Bill Wilson Center’s Safety Net Shelter. The Safety Net Shelter serves approximately 200 children (ages 12 to 17) each year, including children from Sunnyvale. Operating support will allow the Safety Net Shelter to maintain operations while completing necessary repairs and meeting debt obligations. PLHA funds will be used to fund Bill Wilson Center staff costs related to shelter operations.

Project Evaluation and Analysis

One time fund for continued operation of Safety Net Shelter.

Fiscal Impact

Funded from State PLHA funding sources.

Funding Sources

Permanent Local Housing Allocation (PLHA) grant program administered by the State Department of Housing and Community Development (HCD)

Plans and Goals

HE - Housing Element - HE-5: Equal Housing Opportunities

836850 - PLHA Unhoused Services

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Outside Group Funding	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

The City will use PLHA funds to provide rental assistance for Sunnyvale unhoused. The City had allocated multiple years' PLHA awards totaling approximately \$1.6M for this program. This amount may be adjusted pending HCD's final allocations of PLHA funding. The funds were previously allocated towards a rental support program which is no longer moving forward. Instead, the funds have been allocated towards unspecific unhoused support services at this time. Funds will be allocated to projects at Council's discretion but potential funding projects include overnight warming locations, safe RV parking program case management, street outreach case management and transitional shelter.

Project Evaluation and Analysis

City staff is actively researching implementation of this program including potential adjustments to support general unhoused services.

Fiscal Impact

Funded through outside PLHA program.

Funding Sources

Permanent Local Housing Allocation (PLHA) grant program administered by the State Department of Housing and Community Development (HCD)

Plans and Goals

836860 - Senior Accessibility Modifications

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Outside Group Funding	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

The City will use PLHA funds to complete accessibility modifications in lower-income households such as grab bars, handrails, wheelchair lifts, and ramps. Eligible households must meet low-income requirements and include a senior or person with a disability. PLHA funds will be used to expand the City's existing Home Access Grant program to increase households served and provide greater flexibility in funding amounts. Based on estimated PLHA funding allocations, the City is allocating approximately \$342K for this program.

Project Evaluation and Analysis

Project will serve between 10-30 lower income households in Sunnyvale. Program will expand upon existing Home Improvement Program.

Fiscal Impact

Funded through State PLHA funding.

Funding Sources

Permanent Local Housing Allocation (PLHA) grant program administered by the State Department of Housing and Community Development (HCD)

837010 - Street Outreach, Temporary Hotel Program, and Mobile Hygiene Services

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

Street outreach services include case management, transportation, temporary hotel stays, and basic needs supplies. Mobile hygiene program includes case management, laundry, showers, restrooms, and supplies at two locations, twice a week, for four hour increments for unhoused Sunnyvale residents. The City’s current unhoused street outreach provider currently operates a temporary hotel-based shelter program for unhoused residents. In December 2024, an amendment is approved by Council to expand hotel rooms to run one seasonal Inclement Weather Hotel Pilot Program between December 2024 and April 2025.

Project Evaluation and Analysis

The goal of the Street Outreach Program is to provide intensive field-based outreach and case management services to support individuals who may be living in encampments, vehicles, on the street, or other places not ideal for human habitation. The expectation is to effectively engage these individuals by providing the necessary services needed to increase quality of life, reduce risks to health and safety, and transition individuals from homelessness into temporary or permanent housing. The delivery of services is based on principles of Housing First, Trauma-Informed Care, and Cultural Competency, Racial Equity, and Inclusivity.

Fiscal Impact

RTC 24-0830 award a Contract in the Amount of \$909,780 for Street Outreach and Essential Homeless Services (F24-20)

The total contract amount for one year including the base proposal and the additional mobile hygiene service is shown in the table below:
Street Outreach (including 5 motel rooms): \$651,457
Mobile Hygiene Services (2x per week): \$258,323
TOTAL: \$909,780

RTC 24-0198 approved \$73,185 to add an Inclement Weather Hotel Pilot Program (Study Issue OCM 22-02) by reallocating PLHA funding from recently canceled PLHA rental assistance to unhoused seniors program.

Funding Sources

General Fund and Permanent Local Housing Allocation (PLHA) Fund

Plans and Goals

837020 - Sunnyvale Community Services TBRA Program Support

Originating Year:	2025	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Matt Hazel

Project Description/Scope/Purpose

Via Budget Mod No. 7, provide \$250,000 per year for two years to SCS for operational expenses of their Tenant-Based Rental Assistance (TBRA) program. Program is currently funded with HOME grant, Housing Mitigation, and Low-Moderate Income funds. The additional funding will assist SCS in providing adequate staff to manage a program with 40 households and provide individualized casework and critical needs assistance for program participants. Funding will also help with overhead costs and operating expenses. The major milestones of the program are keeping around 40 households housed and having at least 90% of households exit to a positive destination. A positive destination includes any temporary or permanent housing opportunity.

Project Evaluation and Analysis

Funds will be tied to the successful operation of the TBRA program. SCS has an existing federally funded TBRA contract with performance metrics, this funding will be tied to the same performance metrics of serving no less than 40 households per year.

Fiscal Impact

General Fund support for the SCS TBRA program will be allocated each year for two years. These funds supplement funds from the HOME Grant Fund, Housing Mitigation Fund, and Low and Moderate Income Housing Fund. The project will cost \$250,000 each year to be spent on operating expenses such as staff training, utilities, insurance, etc, as well as salaries and benefits for Case Workers, Program Managers, Housing Specialists, and other related supportive positions. The related funding budgets include the HOME grant which provides \$1,000,000 each year for tenant rent subsidies and security deposits, and the Housing Mitigation and Low Moderate Income Housing funds which provide \$100,000 and \$250,000 each year for similar costs this project will be used for, salaries and operating expenses. Future replacement costs rely heavily on individual donors and City funding sources. HOME grant funds will be decreasing in two-four years as the fund diminishes, likely causing the TBRA program to decrease in size and funding needs.

Funding Sources

837190 - Safe Parking Capital Grants Program

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

On November 12, 2024, Council introduced the Safe Parking Ordinance and approved the staff recommended programs including the creation of a capital grant program using General Funds to assist nonprofit and faith-based organizations to develop Safe Parking programs on private land. The grant funding would cover one time capital improvements (such as required infrastructure, portable restrooms, parking lot enhancements, etc.) to a potential Safe Parking site and other start-up costs needed to secure a Safe Parking permit to operate Safe Parking in the City of Sunnyvale.

Project Evaluation and Analysis

Applications for the Safe Park Capital Grant would be approved through an over the counter, first come first serve process. Grantees would be required to secure a Safe Parking Program permit prior to funding distribution. Grants would be reimbursement based. Housing Division staff would manage the ongoing monitoring and compliance of all grants and subsequent Safe Parking programs awarded through this process.

Fiscal Impact

General Fund has been identified for this one time capital grant program.

837200 - Santa Clara County Planning Collaborative

Originating Year:	2025	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

The City has participated in the Santa Clara County Planning Collaborative (SCCPC) for the past 6 years. The Collaborative is made up of all cities within Santa Clara County to work cohesively on joint land use and housing topics. The SCCPC provides technical assistance, project management support, and leads county wide projects on behalf of cities. The SCCPC is led by Community Planning Collaborative consultant in partnership with the Cities Association.

Project Evaluation and Analysis

In recent years, local grant funds covered the cost of the consultants work to lead the SCCPC. However, that grant funding is no longer available. Because of this, cities are being asked to pay their fair share to participate in the SCCPC. Cost share is by city population.

Fiscal Impact

Sunnyvale's fair share cost of the SCCPC for the next two fiscal years is \$37,000.

837270 - Housing Element Update

Originating Year:	2021	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

This project provides funding for consultant costs associated with the preparation of the upcoming Seventh Cycle (2031-2039) Housing Element, which will be due in January 2031. State law requires all jurisdictions to update the Housing Element of their General Plan every eight years. Housing Elements must be reviewed and approved by the State Department of Housing and Community Development (HCD). This certification process has become increasingly stringent and labor intensive, with extensive planning, community engagement, and multiple revisions required. The City anticipates engaging a consultant in FY 2029/30 to begin the update process. This project considers funding for next two cycles of housing element FY 2029/30 and FY 2037/38.

Project Evaluation and Analysis

This project funds technical assistance costs related to the preparation and adoption of the 2031-2039 Housing Element. The primary goals of the Housing Element Update are to ensure compliance with Housing Element law by the adoption deadline, accelerate housing production, and meet the housing needs of the community and the City's Regional Housing Needs Allocation.

Fiscal Impact

This project will be funded by State grant sources to the extent possible with the remainder funded by General Funds. The 2023-2031 Housing Element Update budget consisted of 95% State grant sources including Local Early Action Planning (LEAP), Regional Early Action Planning (REAP), and Planning Grants Program (PGP). The remaining 5% consisted of General Funds.

Funding Sources

General Fund, State grant sources to be determined

837600 - 352 East Java Drive

Originating Year:	2024	Project Type:	Housing	Department:	150 - Community Development
Planned Completion Year:	2029/30	Category:	Special	Project Manager:	Ryan Dyson

Project Description/Scope/Purpose

352 E. Java Drive is a proposed 308-unit affordable rental housing project developed by the Pacific Companies and Miramar Capital. 305 units will be affordable to lower-income households and three units will be unrestricted manager's units. The total development cost for the project is estimated to be approximately \$208 million.

In 2024, City Council approved a conditional award of \$14,000,000 in City funds as part of the City's 2024 NOFA (RTC 24-0863). Funds will be used for construction and related development costs for the project. Funds will be disbursed as a loan of Housing Mitigation Funds.

Project Evaluation and Analysis

This project is currently in the predevelopment stage. The Pacific Companies/Miramar Capital submitted a preliminary application for planning entitlements in June 2024. The development team intends to submit a formal planning application in Q3 2025 and secure planning entitlements by Q3 2026 and apply for federal Low-Income Housing Tax Credits by the end of 2026. Following the tax credit award, the City will begin negotiations with developer to enter into a Loan Agreement, Affordable Housing Agreement, and related documents. This timeline would enable the project to commence construction by Q3 2027.

Fiscal Impact

Council approved a total of \$14,000,000 in Housing Mitigation Funds for construction and development costs in RTC 24-0863. Funds will be disbursed upon construction commencement, expected in Q3 2027.

THIS PAGE IS INTENTIONALLY BLANK

WATER PROJECTS

THIS PAGE IS INTENTIONALLY BLANK

Sunnyvale provides water services as a municipal utility. Delivering water to residents and businesses in Sunnyvale is one of the core services the City provides. The City's Water Fund Enterprise incorporates water demand and supply management, ensuring safe and reliable supply and distribution, maintaining financial stability, meeting quality standards, providing fire protection, and providing responsive customer service.

MAJOR WATER PROJECTS

The current budget includes projects that are aimed at maintaining the infrastructure for storing and delivering water, as well as securing supplies for the future. Focus is being placed on rehabilitation and maintenance of water tanks, wells, and water mains.

Water Mains. The current budget includes \$112 million over twenty years to replace the City's aging water mains. The City's water system conveys water to customers through 330 miles of pipes that vary in size from four to thirty inches in diameter. Many of these pipes are over fifty years old and have exceeded their estimated useful lives. As a result, main breaks are becoming more frequent. The project focuses on areas of the City where soil conditions are most corrosive or where fire protection needs to be upgraded. It is assumed that water line replacement will be an ongoing need for the foreseeable future.

Automated Meter Infrastructure. The City recently completed an Automated Meter Infrastructure (AMI) feasibility study. The study evaluated updating the City's existing meter infrastructure to expand remote reading options and recommended older meters for replacement. Many of the City's water meters are older and may not be registering all the water flowing through the meter. A project was added for FY 2025/26 to replace all older meters and add remote reading capability citywide. The \$22 million project is expected to take four years to complete and would assist with water loss due to leaks or inaccurate meters, as well as provide a customer service portal and an app for customers to monitor their usage.

Water Tanks and Wells. The City's water system has ten potable tanks, five of which have a five-million-gallon capacity each. The remaining five smaller tanks each hold half a million gallons. Water tanks play an important part in the City's water supply and distribution system. Their main purpose is to provide enough water to equalize the daily demand on the water system and to provide for peak demand. They also provide emergency water back-up and fire protection. The budget includes \$3.7 million for refurbishment of water tanks.

Water Transmission Valve Replacement. The budget includes \$3.5 million over the next five years to replace aging valves on the City's transmission water lines. Spanning more than 16 miles, the transmission system is a vital high-pressure backbone of the City's water infrastructure. Most of the valves are more than 60 years old and have reached the end of their service life. This project is essential to maintaining the reliability and performance of the water transmission system.

Recycled Water Pipeline Expansion. The budget includes approximately \$1.5 million over the next three years to install approximately 2,370 linear feet of recycled water (RW) pipeline. The city currently operates around 22 miles of RW distribution pipelines. This project supports the expansion of the network, beginning with two priority sites identified in the 2024 Recycled Water Master Plan Update:

Moffett Park Drive at Borregas Avenue: Approximately 1,400 linear feet of new 8" RW pipeline will connect existing dead-end lines, creating a looped system to enhance reliability.

Sunken Gardens Golf Course: Installation of about 970 linear feet of 6" RW pipeline will enable recycled water use for golf course fairway irrigation.

Expanding the RW system promotes a more sustainable water supply by reducing reliance on potable water.

806351 - Land Development and Capital Construction

Originating Year:	1998	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project provides support for construction activities and consultant services involved with land development and capital construction projects. The project will allow for the purchase of construction and consultant services, miscellaneous equipment parts and repairs, and general supplies. In addition, the project will allow for the rental or lease of specialized equipment to support construction activities and consultant services for record drawing updates to the City's GIS.

The project will allow for the purchase of water meters and meter box/lids, to be used for new development and capital projects. Depending on the meter size, the cost range to purchase individual meters is between \$150 to \$15,000 each. The water meter budget is based on the rate of development activity.

Project Evaluation and Analysis

This project allows staff to purchase materials, equipment, and meters ahead of time, so when new developments are being constructed the time period for them to be occupied is not delayed.

In general, meters and meter appurtenances are frequently purchased in bulk, which allows the City to lower its purchasing cost due to better pricing. The cost of the water meters and construction activities is paid by developers or by capital project allocated funding. This project allows the City to purchase and control the type of meters and water system appurtenances installed.

Based on future development and capital projects that have been approved by the City, staff has estimated an increase in the need to order meters and other construction material for project support through FY 2026/27.

Fiscal Impact

This project is funded by utility fees collected from developers for the cost to purchase water meters, vaults, and construction services provided by the City. We will revisit and evaluate funding needs in two years based on development and capital project needs.

815203 - Replacement of Water/Sewer Supervisory Control System

Originating Year:	2000	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Susithra Sundaresan

Project Description/Scope/Purpose

The City's existing Supervisory Control and Data Acquisition (SCADA) System monitors and controls the operation of its water supply and distribution system, and provides monitoring over selected sanitary sewer, stormwater, and recycled water facilities. Twenty-nine stations are monitored by the current SCADA system. The current SCADA system was completed in FY2012/13 at a cost of \$476,000.

Funds will be used to upgrade the remote radio sites to ensure good communications and redundancy. Currently a cradle point pilot is being tested that utilizes cellular communications. If the pilot proves to enhance communications at the remote sites, the cradle point cellular technology will be rolled out to other remote sites. IT is involved with the pilot and has certain parameters that need to be met prior to expansion.

Due to the critical nature of such a system, funds in FY 2030/31 will be utilized for the design/selection of new programmable logic control devices and communications and software upgrades.

Project Evaluation and Analysis

Continued operation of the SCADA system is critical to Water Division operations. This project ensures that water system operations controlled via SCADA will continue. Operating expenses, maintenance and repairs are incorporated in the Water Resources program. It is anticipated that the upgrades to the SCADA system (addition of items to be monitored and/or software upgrades) will be needed every ten years.

Fiscal Impact

This project is funded by revenues captured in the Water Supply and Distribution Fund and the Wastewater Management Fund. Funding will be split based on each system's use (water or wastewater) of the SCADA system - Water Supply and Distribution Fund 95%, Wastewater Management Fund 5%

819771 - Utility Maintenance Management System

Originating Year:	1996	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project funds the purchase and implementation of a computerized maintenance management system (CMMS) for the City's utility enterprise assets in the water, recycled water, sewer, and storm drain systems. The CMMS is an important tool used to inventory and track maintenance of utilities, and to assist with cost projections and scheduling of long-range infrastructure renovation and replacement. Information from this system is used to update the funding plan for renovation and rehabilitation of the utility enterprise assets. The current software is over 11 years old and no longer meets the needs of the City's enterprise assets.

Project Evaluation and Analysis

This project provides a database of utility components including water mains, sewer mains, valves, fire hydrants, clean outs, repairs, pipe size, and type, and maintenance schedules. The current software is used mainly for a call out/service request system, lacks the GIS integration needed to be an effective means of asset management, and no longer meets all the division's needs. Information provided by the new system will be used to estimate the functional life of the components and to update the funding plan for renovation and rehabilitation of the utility enterprise assets. This product is important to the long-term maintenance of the utility systems.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund and the Wastewater Management Fund. Project funding will be used to maintain and update the database, including updating the software version.

Funding Sources

Wastewater Management Fund 50%, Water Supply and Distribution Fund 50%

824281 - Leak Detection and Condition Assessment Program

Originating Year:	2004	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project provides funding for a leak detection program for the water distribution system, which is comprised of 330 miles of water mains that are less than 16-inch in diameter. The project also provides funding to conduct a condition assessment of the City's ten miles of transmission water lines that are 16-inch and larger. Transmission mains are critical as they supply large quantities of water to meet Sunnyvale's residential and commercial water supply needs. Approximately 25 miles of City water main will be tested over the next six years using the latest ultrasonic technology to assess pipe leakage. The assessment data will be used to prioritize the segments of pipes that require replacement and will assist in keeping the City's water loss to a minimum, especially during drought conditions. Water pipe failure could result in significant monetary losses.

As recommended by the California Urban Water Conservation Council, and as identified in the City's adopted 2010 Urban Water Management Plan Demand Management Measure #3, leak detection and system water audits are to be performed periodically by an outside contractor. Any water loss due to leakage, theft, faulty control systems, or any other reason represents revenue losses to the City. Follow-up actions when leaks are located may include repairing leaky pipes and valves, replacing water mains, annual exercising of valves, and implementing corrosion control procedures (i.e. cathodic protection program).

Project Evaluation and Analysis

This project is referenced in the City of Sunnyvale Water Utility Master Plan 4.9. It represents the most cost-efficient way to minimize water loss and ensure that potential transmission and distribution infrastructure deficiencies are addressed in a timely manner to avoid loss of service and property damage.

The primary benefit of early leak detection is finding a leak before it becomes a larger problem, resulting in more water being lost. Repair also keeps leaks from deteriorating into large-scale problems that can lead to system failure, causing emergency conditions and compromising public safety.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund revenues. A leak detection program will identify water losses in the system, and also will allow staff to proactively fix a potential leak before it turns into a bigger problem requiring emergency repairs. Funding beyond FY 2028/29 will be evaluated in future years, there is new technology on the market (satellite leak detection) that would greatly enhance the leak surveying efforts of this project. It would be beneficial to explore these new technologies and incorporate if found to be beneficial to the project's purpose. In the long term, funding may be moved to the operating budget.

824291 - Water Cost of Service Study

Originating Year:	2004	Project Type:	Water	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

Every five years, the Department of Finance performs a cost of service study of the water system to update and align the City's water rates with the costs associated with providing water service. Staff works with a water finance specialist to develop a cost of service model and populate the model with current data. The study generates a cost of service for each customer class and recommends adjustments to the City's rates and rate structure to ensure costs are recovered on an equitable basis from the different customer classes.

The most recent analysis was done in FY 2020/21, but was not finalized until FY 2021/22. Rate recommendations from this study took effect July 1, 2022. The next study is scheduled for FY 2025/26, with funding every five years.

Project Evaluation and Analysis

City policy and state law require that the rates be periodically restructured in a way that equitably allocates program costs among rate payers (Council Policy 7.1.B.1.4). An alternative to using a consultant would be for staff to conduct the cost of service study. However, city resources and staff hours are not available for a project of this magnitude. If the project is not completed, it is possible that rates will not reflect actual costs, will not provide the complete cost-recovery needed to provide water services, and costs may not be equitably allocated per city policy. Current and future funding reflects an update to the current rate model, not a complete restructuring of the water rates.

Fiscal Impact

The studies completed through this project will ensure utility rates are consistent with the true cost of providing the utility service and provide enough revenue to operate the utility. This is a requirement of Proposition 218, and the results of the analysis will be used to determine utility rates for each customer class.

825221 - Central Well Reconstruction

Originating Year:	2006	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

The Central Water Plant services Zone 1 of the City's water supply system. The plant has been out of working order since 2007. The area is supplied by the San Francisco Public Utilities Commission's (SFPUC) Hetch Hetchy System. The City also has the ability to move water from the Santa Clara Valley Water District (SCVWD) into the area if needed.

The Comprehensive Preliminary Design Study (completed in October 2013) recommends new well construction at this location as a backup. As an added reliability it would be prudent to have a functioning groundwater well servicing this section of the City's water system.

Preliminary investigation and design are anticipated to commence in FY 2027/28, with construction following in FY 2028/29. Funding needs for construction are conceptual at this point, and will be refined further after the preliminary investigation findings.

Project Evaluation and Analysis

The Central Water Plant is an important, but not critical, element of the City's water supply system. This project will ultimately fund a new well on the site. Based on current water demands, a new well is not needed for the foreseeable future. Existing buildings have deteriorated, and the equipment is currently out of service.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. Once the project is complete, additional operating costs such as maintenance, energy and water quality testing will be needed. No estimate for such costs yet.

825231 - Cleaning of Water Tanks

Originating Year:	2006	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project provides funding to clean the interior of the City's nine water storage tanks without draining. This is accomplished by using commercial diving services to remove sediment on the floors of the tanks using a vacuum system, and to perform minor touch-up corrosion repairs that can extend the existing coating life by five to ten years. Each tank has been placed on a five-year cleaning schedule.

Project Evaluation and Analysis

Water tanks are critical to the storage and delivery of safe drinking water. The project will preserve the City's investment in its infrastructure and will help maintain water availability and quality. State Water Resources Control Board recommends cleaning of tanks per American Water Works Association (AWWA) standards. Not funding this project could compromise the water quality supplied to customers.

Fiscal Impact

This project is funded every five years to perform necessary cleaning on the inside of the City's water tanks per AWWA recommended standards. Not performing this cleaning would result in the buildup of silt in the tanks and cause poor water quality in the water system requiring additional water quality flushing and water sampling.

825251 - Mary/Carson Water Plant Upgrade

Originating Year:	2006	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

This project will evaluate replace all of the mechanical and electrical components of the Mary-Carson Water Plant, including associated pump house structure and foundation, seismic upgrades and soundproofing, access to and around the structure, and emergency backup power to the plant as needed. In October 2013, HydroScience completed a Potable Water System Comprehensive Preliminary Design Study Report. The report provided condition assessments and specific recommendations for items needing repair/replacement at all City water plants and well facilities. This pump station should be upgraded to allow for all pumps to be electric-driven with a single generator for standby power. Landscape improvements shall also be incorporated to address large pine trees adjacent to the pump station building which are causing root damage to the hardscape next to the building.

The mechanical and electrical systems associated with the Mary-Carson Water Plant were built in 1966 and have exceeded their 40 year life expectancy. As referenced in Chapter 8 of the City's Water Utility Master Plan, equipment replacements and upgrades are necessary to maintain system integrity, conform to new Supervisory Control and Data Acquisition (SCADA) specifications, and to minimize the impact of emergency engine operation on local air quality.

Minor repairs have been done to the Mary-Carson roof. However, this building has structural and foundation problems associated with tree roots and will require re-roofing. This project is revised to include roof and building evaluation and repair/replacement as part of the mechanical and electrical portion of the water plant renovation and will need to consider sound proofing of building due to proximity to residential homes.

Associated site improvements may also be required, such as paving and repairs to the overflow moat and draining of the site and access to the structure housing the mechanical and electrical components.

Project Evaluation and Analysis

Improvements associated with the tanks and tank anchorage will be addressed in Project 830170 Refurbishment of Water Tanks. This is a substantial improvement. The completion year is anticipated in FY 2026/27 to account for lead times, work warranty periods, and punch list/closeout.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. Ongoing operating costs are not expected to increase, and could potentially decrease as we will be replacing old equipment with state of the art components.

825301 - Pressure Reducing Valve Replacement

Originating Year:	2006	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project will replace, repair, and evaluate the City's 60 existing pressure-reducing valves (PRVs). In addition, this project will connect the PRVs to the Supervisory Control and Data Acquisition (SCADA) System to allow City staff to remotely monitor and control water system pressures, turn valves on and off quickly in emergencies, and in general, better manage and maintain water quality. PRVs are an integral part of the water distribution system as they maintain balanced water pressure between the City's three pressure zones.

Annual budgeted amounts are based on the historical average cost of repairing two PRVs per year. Actual costs will vary depending upon the size of the valve and whether the work involves total replacement or minor repair. As part of the annual evaluations, staff will determine whether each PRV is essential to the overall system. If certain PRVs are determined to be unnecessary, staff will remove them from the system.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure of the Water Utility and is referenced in the City's Water Utility Master Plan 2.1.2. Properly functioning PRVs help reduce the number of main breaks caused by high pressure. Proper functioning PRVs are necessary to maintain pressure at customers' premises to avoid pressure spikes that could cause water leaks and water heater malfunctioning.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund revenues. This approach will result in savings of nearly \$1.2 million over 20 years. A major cost factor in this project is the cost of the material required such as valves, fittings and electronic components that require to be replaced.

Funding Sources

825451 - Replacements and New Installations of Potable Water Mains

Originating Year:	2006	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

There are over 340 miles of water transmission and distribution pipelines in the City, varying in diameter from 4-inch to 30-inch. Approximately 66% of the existing pipes are made from cast iron, and were installed in the 1940s to 1970s. Many of these pipes have reached their useful life, especially in areas north of El Camino Real where soils are relatively corrosive. In some cases, internal corrosion results in water quality complaints and reduced fire protection flow.

This project funds replacement of water mains that are no longer reliable due to leaks, breaks, and corrosion. It additionally funds installation of new potable and recycled water mains as needed to improve system capacity and operational flexibility.

Project Evaluation and Analysis

Water main breaks along deteriorated pipes cause service interruptions to residential and commercial customers, and result in costly emergency repairs. The integrity of the City's water distribution system is critical to protect public health and convenience, to provide for reliable fire protection, and to ensure continuity of private and public business operations.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. Although timing of design and construction may vary, water main projects are scheduled to fit within the existing budget.

826960 - Water Utility Master Plan

Originating Year:	2008	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Eric Evans

Project Description/Scope/Purpose

This project provides for periodic updates to the City's water utility master plan and as-needed updates to the hydraulic model. The master plan identifies locations where existing pipes may need to be upsized, and where new pipes may be needed in new locations, to improve system capacity and to accommodate development intensification. It additionally evaluates and makes recommendations related to sources of water including wholesale suppliers and City wells. This project is a part of the Long Range Infrastructure Plan.

Previous master planning work has made recommendations for capital projects due to age of pipes and exposure to corrosive soils. However, staff has determined that field data from water main leaks and breaks is a more reliable guide of where to implement such projects. For this reason, future master planning work may not include condition-related analyses.

Project Evaluation and Analysis

This Water Utility Master Plan has previously been updated approximately every 10 years. The most recent Master Plan update was in 2010. Subsequent related studies, including master planning work done by consultants for development Specific Plans since 2019, indicate that the system has adequate capacity to meet current and projected needs. Budget for the next master plan update is therefore proposed for FY 2027-28.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund. There is no additional fiscal impact resulting from preparing the master plan. Any additional fiscal impact will be assessed depending on the recommendations of the master plan which will come at a later date.

830170 - Refurbishment of Water Tanks

Originating Year:	2014	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project will refurbish one 5.0 MG storage tank at Wolfe-Evelyn. A structural and coating evaluation study found the tank to be in poor condition. Comprehensive tank refurbishment may include interior recoating, cathodic protection improvements, foundation seismic restrainers, flex coupling adapters, repairs to the overflow moat, and other necessary improvements. In addition, improvements identified by the State Water Resources Control Board are exterior recoating of the San Lucar tank, fall protection systems at 9 tanks, and modifications of roof vents at 8 storage facilities. The fall protection systems will include the redesign or the elimination of vertical access ladders to be replaced with spiral staircases around all the tanks. Improvements at eight locations will be designed and constructed separately from Wolf-Evelyn tank.

Refurbishing tanks is more cost-efficient than replacement. Proper coating should keep the tanks in useable condition for up to 40 additional years. Wolfe-Evelyn tank is used to store San Francisco Public Utilities Commission (SFPUC) water to be used during peak days demands or in the event of a fire. Construction activities are usually limited to the winter months when water demand is lowest.

Project Evaluation and Analysis

This is a critical project to comply with State Water Resources Control Board requirements for water tanks. Additionally, it is referenced in the City's Water Utility Master Plan Chapter 8.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. This project will result in a reduction of ongoing maintenance costs associated with old infrastructure.

830890 - Urban Water Management Plan Update

Originating Year:	2014	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

The Urban Water Management Plan (UWMP) is a document produced every five years through a program administered by the California Department of Water Resources (DWR). Water suppliers that provide either 3,000 acre feet (AF) of water per year or serve 3,000 or more water service connections are required to produce a UWMP for review by DWR. The UWMP is intended to be a planning document that will assess the reliability of an agency's water resources over a 20-year planning horizon. Water supplies and demands are accounted for, as are expected population increases and development. The UWMP is approved by a resolution of the City Council and the 2015 update to the UWMP has been completed. Next update to DWR will be year 2025, which is due on June 30, 2026.

Project Evaluation and Analysis

Production of an update to the UWMP every five years is a regulatory requirement. DWR reviews and certifies the plans for each water supplying agency. DWR must certify that each agency's UWMP update complies with the Urban Water Management Planning Act (Division 6, Part 2.6 of the California Water Code, sections 10610-10656). Consultants will be hired to assist in the production of the UWMP update. The assistance of consultants assures that all legal and regulatory requirements are being met and that the supply and demand calculations are done accurately.

Fiscal Impact

Estimated costs are for the production of the UWMP by contracted consultants. In addition to the consultant costs, staff time will be required to review Sunnyvale-specific portions of the plan and administer the process of getting Council approval ahead of the DWR deadline.

831550 - Adjust Water Utilities In Support of Paving Projects

Originating Year:	2016	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides funding for the adjustment and replacement of water utility valve boxes, vaults, fire hydrant valves, and any other items that are associated with the water infrastructure that will be impacted by City, County of Santa Clara, or Caltrans pavement rehabilitation and resurfacing projects. Replacement of valve boxes, vaults, and any other items that are associated with the water infrastructure takes place when the facility is broken, or the model is outdated.

Project Evaluation and Analysis

This project will ensure that City assets that are impacted by pavement rehabilitation projects are restored in a manner that meets City standards.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. No additional operating costs will result from implementing this project.

Funding Sources

Water Supply and Distribution Fund

Plans and Goals

831840 - Cathodic Protection SFPUC Turnouts and Transmission Pipeline

Originating Year:	2016	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project allocates funding to provide corrosion protection for existing San Francisco Public Utilities Commission (SFPUC) water system connections and short sections of downstream transmission piping, which serve as the City's primary water supply sources.

In 2020, a detailed review of the six SFPUC connections led to a revised project scope. Three of these sites are currently suitable for receiving cathodic protection systems. At one site, a small, mostly above-ground pipe was deemed cost-ineffective to protect, as any leak or break would have minimal impact on water supply. Its local service area can be easily supplied through other larger SFPUC connections, and City staff can address any corrosion-related repairs reactively with little disruption.

The remaining two sites, which feature larger pipelines, require substantial preparatory construction before they are ready for cathodic protection installation. This preparatory work is more appropriately integrated into a water main repair and replacement Capital Improvement Program (CIP) project rather than this cathodic protection initiative.

The budget initially allocated for the cathodic protection of existing possibly corroding pipes may instead be used to replace them with new pipes featuring passive corrosion protection, such as coatings or polywrap. This approach may prove to be a more cost-effective solution at some or all sites.

To ensure system reliability and integrity, implementing corrosion protection at the identified locations will enhance water system protection, extend service life, and reduce the risk of catastrophic pipeline failure. Design for this phase is planned for FY 2024/25, with construction anticipated in FY 2026/27.

Project Evaluation and Analysis

The SFPUC water system connections and transmission pipelines provide 50 percent of the City's water supply and are critical assets in the City's infrastructure.

Fiscal Impact

This project is funded by Water Supply and Distribution Fund revenues. Projects will be designed to fit within the budget. Some minimal operation costs are associated with ongoing testing and monitoring and calibrating the cathodic protection system.

834360 - Water System Seismic Risk and Vulnerability Study

Originating Year:	2019	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Eric Evans

Project Description/Scope/Purpose

The City and Valley Water completed seismic studies in 2004. This project will produce an updated study that accounts for all system improvements implemented since then. It will evaluate pumps, tanks, pipes, and other features to determine their vulnerability to earthquakes; and will present recommended projects that will improve their reliability and resiliency.

Project Evaluation and Analysis

The integrity of the City's water distribution system is critical to protect public health & convenience, to provide for reliable fire protection, and to ensure continuity of private & public business operations. Seismic protection of the system is essential to keep it functioning after an earthquake.

Fiscal Impact

Based on the findings of the study, additional funds may be requested under this project number, or under a proposed new project number, for implementation of the recommended improvements.

834380 - Fire Hydrant Replacement

Originating Year:	2019	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

The City has approximately 3,500 fire hydrants. The estimated cost of replacement per hydrant is \$1,600 for parts, with labor performed by City crews. This request for annual funding will enable the City to continue the hydrant replacement program at an approximate rate of six to seven per month.

Project Evaluation and Analysis

This is a proactive hydrant replacement program, which allows City crews to replace old hydrants that have reached the end of their useful life. The City is anticipated to replace over 80 old rusted out hydrants annually. The project will ensure the City attends to fire hydrant replacements before possible complete failure of hydrants (inability to use the hydrant) during firefighting activities.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund. The ongoing cost of painting the hydrants every few years is included in the Department's operating budget.

834590 - Urgent Water Main Repairs

Originating Year:	2019	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project budget enables the Water Operations Division to have a contract in place to utilize an outside contractor to perform urgent water main repairs in the event that City staff is not available or equipped to perform repairs.

Project Evaluation and Analysis

Currently, when a water main break occurs, off-duty staff are called and asked to work overtime to make the repair. Main breaks often take five to six employees to handle repairs, traffic control and clean up. Occasionally some main breaks present a situation where staff do not have expertise to complete the work due to the type of pipe involved.

When main breaks happen, City staff will be contacted first. However, this project provides a backup plan if needed when there are not enough staff members and/or expertise available to perform the work. This contract is intended to be used on an as needed basis, for an on-call contractor to be paid on a time and materials basis. This budget will not be spent unless needed.

This project is being proposed as a capital project rather than operational since the cost of these types of repairs is often very large compared to typical, routine costs under the operating budget. Two typical main breaks with extensive pavement restoration can easily add up to approximately \$250,000.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund.

834610 - Water System GIS Updates and Maintenance

Originating Year:	2019	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Eric Evans

Project Description/Scope/Purpose

This project is to retain a consultant to perform updates and corrections to the City's existing Water Geographic Information System (GIS) mapping. An existing Water GIS implementation project, managed by the Information Technology Department (ITD), is nearing completion. The scope of this project included converting the existing mapping to the Local Government Information Model (LGIM) so that Sunnyvale's data would have the same format as other public agencies in Santa Clara County, including the positions of the grid tiles. The scope of work also included the incorporation of redline markups in the paper block books entered by field staff when changes occurred in the field (i.e., installation of new valves). Even after completion of the existing Water GIS project through ITD, the water GIS mapping would still be out-of-date.

There are miles of new pipeline that have been installed in the past 10 years that have not been updated in the mapping. This has led to confusion and unnecessary expenditures of resources. It has also led to inaccurate hydraulic modeling results. This project would bring the current GIS map up-to-date to reflect the water infrastructure on the ground.

Project Evaluation and Analysis

This project aims to greatly improve the accuracy and reliability of the Water GIS mapping, which will improve the efficiency of our water system management.

The estimated project costs for the first two years are based on consultant's approximate cost of \$100 per sheet of corrections (block book page or as-built) and the present need for approximately 800 sheets.

ITD will support this project and will help coordinate the selection of a consultant for the Environmental Services Department (ESD) to work directly on fulfilling their needs. The consultant will be responsible for making the necessary GIS changes and updates. ITD will provide access to the consultant and will have periodic check-ins with the consultant and the project details as a whole. ITD will manage the contract and negotiate timelines that work for all stakeholders and ITD staff will assist with tasks where and as needed.

Fiscal Impact

This project is funded by the Water Supply and Distribution Fund.

835940 - Comprehensive Update of 2013 Feasibility Study for Recycled Water Expansion

Originating Year:	2022	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Mansour Nasser

Project Description/Scope/Purpose

Update the 2013 Recycled Water Study, to evaluate options for extending the recycled water system including any potential state and federal financing opportunities available.

Project Evaluation and Analysis

Since 2013 when the last study was prepared, several changes on the regulatory side have taken place, and new developments have been proposed. In addition, and for the immediate future, Valley Water is not interested in engaging Sunnyvale on an advanced water treatment project. Updating the 2013 Study will provide Council with information on the resources and investment needed to expand recycled water use.

Fiscal Impact

\$170,000 from the Water Fund and \$80,000 from Wastewater will fund this project. The results of the study will likely result in additional capital and operating costs.

Funding Sources

Water Supply and Distribution Fund and Wastewater Fund

836110 - Recycled Water Grant Matching

Originating Year:	2022	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

This project provides the City's local match contribution for potential grants that would help the City expand its infrastructure and create connections for recycled water to reach City parks and other customers.

Project Evaluation and Analysis

Greater use of recycled water would create a more sustainable water supply, which is critical with the frequency and length of droughts impacting the potable water supply. An initial recycled water expansion project was completed in 2017 that added a recycled water pipeline down Wolfe Road to connect to the Apple campus in Cupertino. There are opportunities to connect businesses, schools, and parks located near Wolfe Road to recycled water in the next phase of recycled water expansion.

Fiscal Impact

\$1 million of the project funds will be utilized as grant matching funds, and \$250,000 will be utilized for grant writing assistance. Recycled water expansion is important to the fiscal sustainability of the water fund, as potable water prices grow increasingly volatile with the ongoing drought conditions. Increased recycled water usage provides other, potentially lower cost alternatives to potable water in some scenarios.

836220 - Automated Metering Infrastructure (AMI) Feasibility Study

Originating Year:	2023	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Mansour Nasser

Project Description/Scope/Purpose

The City has approximately 29,500 water meters. This project will study the feasibility of phasing out the old water meters with an Automated Metering Infrastructure (AMI). AMI system tends to reduce surprise water bills, detect potential leaks early and a customer can view up to date water use. This is in addition to being able to remotely read all the water meters.

Project Evaluation and Analysis

Currently most water meters are manually read and customers are unable to view their water use via a mobile device in real time. This project will evaluate the cost and timing of implementing an AMI system citywide which allows viewing water consumption in real time. The project will also provide recommendations on phasing such system on citywide basis.

Fiscal Impact

This project is funded by water utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide water service.

837120 - GIS Utility Network Migration

Originating Year:	2025	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Special	Project Manager:	Mansour Nasser

Project Description/Scope/Purpose

The City's current GIS infrastructure relies on the Geometric Network, a feature of Esri's ArcMap software, which is scheduled for retirement on March 1, 2026. After this date, Esri will no longer provide support, updates, or security patches, making continued reliance on the system increasingly risky. To ensure long-term functionality, data integrity, and compatibility with modern GIS advancements, migrating to the Utility Network in ArcGIS Pro is essential. Without this transition, the City faces potential system failures, security vulnerabilities, and the inability to receive technical support. Additionally, the Utility Network offers significant benefits, including advanced modeling capabilities, improved network tracing, and better integration with asset management systems. Upgrading will enhance operational efficiency, streamline data management, and support long-term infrastructure planning. Securing budget for this migration is crucial to maintaining a modern, reliable GIS platform that meets the City's operational needs.

Project Evaluation and Analysis

The alternative is not to fund this project and the support for the current software will no longer be available after March 1, 2026. This project will ensure continued system support, reliability, and improved network management. The Utility Network will enhance data accuracy, streamline operations, and provide advanced analysis tools critical for infrastructure planning.

Fiscal Impact

There are no ongoing operating impacts anticipated.

837180 - Water System Transmission Line Valve Replacement and Upgrades

Originating Year:	2025	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The City's water transmission system stretches over 16 miles and plays a vital role in delivering high-pressure water to our distribution network, storage tanks holding 28 million gallons, and pump stations. This project will replace 70 water valves ranging in size from 8 to 30 inches over the next three years.

Project Evaluation and Analysis

A significant portion of the transmission system was constructed in the 1960s, and the existing water valves have reached the end of their useful life. This project will help maintain reliable and efficient water distribution. Replacing the old valves will also allow for better system isolation during pipeline emergencies.

Fiscal Impact

The project is estimated to cost \$3,450,000 over the next three years.

837450 - Recycled Water Pipeline Expansion

Originating Year:	2025	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The City has approximately 22 miles of recycled water (RW) distribution pipelines ranging in diameter from 8 to 36 inches. This project will enable expansion of the distribution network initially with the following two sites which were identified in the 2024 Recycled Water Master Plan Update:

- Moffett Park Drive at Borregas Ave: Existing 8” RW pipelines terminate as dead ends several hundred feet away from this intersection. Installation of approximately 1,400 lineal feet of new RW pipelines will remove the dead ends and form a looped system for greater reliability.
- Sunken Gardens Golf Course: Installation of approximately 970 lineal feet of 6” RW pipeline will allow for irrigation of the existing golf course.

Project Evaluation and Analysis

Greater use of recycled water creates a more sustainable water supply by reducing consumption of potable water. Recycled water is especially appropriate for uses such as irrigation, HVAC cooling towers, and toilet flushing for which potable water is not necessary.

Fiscal Impact

The planning, design and construction of the recycled water pipelines is estimated to cost \$1,550,000

Funding Sources

Water Supply and Distribution Fund

837520 - AMI Implementation

Originating Year:	2025	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	2032/33	Category:	Special	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

With the support of a consultant, move forward with a proof of concept for a deployment of new AMI (automated meter infrastructure) equipment. A second phase would include either a partial or complete meter replacement.

Project Evaluation and Analysis

This is necessary to fully automate the meter reading process, and to modernize our meters with newer, more accurate technology. This will help ensure the City is maximizing revenue for the water fund, and will prevent losses from leaks or unregistered consumption. This project will include an online portal for customers to see their consumption and get alerts for unusual use, which will provide additional operational and customer service benefits.

Fiscal Impact

This project includes funding for both the first and second phases of the project. Increased reading accuracy will generate additional revenue to partially offset the cost of this project.

900807 - Recycled Water Tank and Pumping Facilities

Originating Year:	2012	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

The current recycled water distribution system has a single storage tank, with a working volume of 1.5 million gallons. The 2013 Feasibility Study for Recycled Water Expansion prepared by a consultant identified the need for additional storage and pumping facilities in order to expand the recycled water system.

The preliminary cost estimate for a 5 million gallon tank plus a needed pump station and pipeline is \$10.9 million.

The use of recycled water benefits the local community and the region as a whole by reducing demand for potable water supplies, and by providing an additional "drought resistant" supply for irrigation and other approved industrial uses. Water recycling also reduces the discharge of certain pollutants to the fragile San Francisco Bay environment and is strongly supported by the State Regional Water Boards.

Project Evaluation and Analysis

Additional recycled water storage and pumping facilities will enhance prospects for coordinating with neighboring agencies on joint recycled water projects, such as coordination with the City of Mountain View for service of recycled water to the NASA-Ames complex.

Specific local benefits of additional storage include: (1) the ability to supply recycled water to new customers in Sunnyvale and neighboring communities; and (2) increased system reliability."

Fiscal Impact

This project is currently unfunded. Potential funding sources include the City of Sunnyvale with potential support from the Santa Clara Valley Water District, or other sources yet to be identified. Operating and maintenance costs would be funded through revenues generated from the sale of recycled water.

Funding Sources

Water Supply and Distribution Fund. Possible grant funding available.

900894 - Recycled Water Inter-Connect Moffett Field/Mountain View

Originating Year:	2014	Project Type:	Water	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

This project provides funding for the City's share of design and construction costs for expanding the City's recycled water interconnections. These interconnections will ensure increased pressure and reliability, and will provide an additional source of recycled water during periods of peak demand. This project adds connections at multiple locations to the City of Sunnyvale's recycled water distribution system.

There are currently three locations being evaluated by this project. All of these connections are on the City's west boundary line connecting to the City of Sunnyvale's 16" West transmission main. The first site is located near Highway 101 and would connect to West Clyde Avenue in Mountain View. The second connection is located near Maude and Highway 237. The third site would require approximately 6,600 lineal feet of pipe to connect Moffett Field to City of Sunnyvale's West transmission main. This would provide recycled water for use at Moffett Field /NASA Research Center, and for use in landscape irrigation. It would also inter-connect with the City of Mountain View.

The project budget represents the City of Sunnyvale's share of the total cost. The cost estimates are based on the 2013 Recycled Water Master Plan. Should agreements be executed with the other agencies and funding becomes available, design will be scheduled for FY 2025/26, with construction beginning in FY 2026/27.

Project Evaluation and Analysis

This project ensures additional recycled water during peak demand and enhances system reliability. It also eliminates the need to use potable water as a back-up to the recycled water system.

The City is currently limited in its ability to utilize recycled water as another viable water source. Connecting to the Mountain View system will allow the City to acquire additional recycled water customers near our boundaries. In addition, this project allows the City to have an uninterrupted recycled water source.

Fiscal Impact

This project is currently unfunded as it is dependent on securing grant revenues and/or cost sharing from other jurisdiction(s).

Funding Sources

Water Revenues. Possible grant funding and/or cost-sharing available.

Plans and Goals

WASTEWATER

THIS PAGE IS INTENTIONALLY BLANK

Sunnyvale provides wastewater management services as a municipal utility. Wastewater collection and treatment is one of the core services the City provides to Sunnyvale residents and businesses. The City's Wastewater Fund Long-Term Financial Plan includes sewage collection and treatment, environmental protection, regulatory compliance, and maintenance of the City's aging collection and treatment systems.

MAJOR WASTEWATER PROJECTS

Wastewater Collection Systems. In general, the collection system projects related to wastewater management address critical and immediate needs. Projects address manholes, sewer pipes, and rebuilding sewer lift stations. The largest of these efforts is the replacement of sewer mains with funding totaling \$37 million over the next twenty years. The proposed budget also allocates an additional \$4.5 million to perform emergency repair and replacement work.

Peery Park Wastewater Capacity Projects. The budget includes capacity increase projects to accommodate increasing sewage flow from Peery Park development. The estimated budget is \$17.6 million with design commencing in FY 2024/25 and construction completed in FY 2027/28.

Sewer Capacity Enhancement Projects. Several sewer capacity projects were recommended in a consultant modeling study completed in 2022. Sewer projects along Mary Ave, California Ave, and upgrading the sewer pump station on Arques Ave are scheduled to start design in FY 2026/27 with construction completed in 2034/35 at an estimated cost of \$14.9 million. Construction is scheduled to be phased over seven years.

Water Pollution Control Plant Biosolids Processing. This project includes \$6.3 million to address the removal, processing, and disposal of accumulated sediment from the Plant's Oxidation Ponds, as well as digester cleaning. These services will be necessary after a permanent thickening and dewatering building can be constructed as part of the Cleanwater Program because the new facilities are designed to only manage solids within the WPCP treatment processes themselves. It is anticipated that ongoing contract dredging will be required for some time until sufficient solids are removed from the ponds. Additionally, contract digester cleaning services will be needed periodically when a digester tank is due for routine cleaning (about every 3-5 years each).

Producing Recycled Water. The Water Pollution Control Plant operates a 440-acre oxidation pond system as part of the secondary treatment system. During early 2021, the ponds became dominated by a blue-green algae and we have been unable to produce recycled water since then. In 2024, the Plant ran a pilot study with a Cloth Media Filter (CMF) and was successful in producing recycled water again. The proposed project includes installing a full scale package plant that can produce 2 Million Gallons of recycled water per day.

805253 - Sewer Emergency Repair and Replacement

Originating Year:	2000	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Winola Cheong

Project Description/Scope/Purpose

City staff routinely reviews CCTV inspection reports to identify sewer system defects and prioritize repairs. This project aims to ensure adequate funding for emergency repairs targeting high-risk defects, particularly those with severe consequences or proximity to critical waterways and facilities. Prompt action is essential to prevent pipe collapses, service disruptions, sewage spills, regulatory violations, and legal liabilities, all of which could lead to costly cleanup and repair efforts.

The City has a pressing need to allocate additional resources towards these emergency repairs. On average, repairing a defect costs approximately \$30,000, with costs ranging from \$10,000 to over \$100,000 based on the scope and complexity. Based on repair costs and completed work in previous fiscal years, staff propose increasing the annual budget to \$450,000 for the next two fiscal years. This increase will help address the most pressing backlog in the system. Once the critical repairs are completed, the annual budget can be adjusted to \$225,000.

Unlike larger sewer main replacement projects, which involve planned, comprehensive pipe replacements, this initiative focuses on emergency spot repairs. It provides the flexibility and immediate funding necessary to address critical issues swiftly, ensuring the continued functionality of the sewer system.

Project Evaluation and Analysis

The alternative is not to fund this project and delay the needed repairs until funds are requested and approved by Council on a case by case basis. These repairs are of an urgent nature most of the time, and delay could result in adverse effects for public health and the environment should overflows occur. The City could also be subject to penalties and fines from regulatory agencies should sewage discharges occur as result of deferring an emergency repair. Delaying can also result in higher repair costs.

Fiscal Impact

Repairs typically range from \$10,000 for a spot repair to over \$100,000 for sewer repairs on a major thoroughfare. The requested increase in annual budget over the next two years will provide the necessary funds for emergency repairs.

822762 - Storm Pump Station Number 2 Rehabilitation

Originating Year:	2002	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2023/24	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project provides funds for the rehabilitation of Storm Pump Station #2, east of Baylands Park. Sunnyvale operates two storm pump stations to pump accumulated storm water into tributaries to the San Francisco Bay. These are required due to areas of the City that are close to sea level and could suffer flooding, particularly during large storms and exceptionally high tides. The current configuration of Storm Pump Station #2 consists of a structure with six pumps (one small electric and five natural gas-powered engines), a storage pond surrounded by a levee, and an access road to get to the facility. Several capital aspects of the facility must be periodically funded.

This station was built in 1962. The pumps and motors are original and need to be replaced. The redesign includes replacing the existing natural gas engines with more efficient electrical submersible pumps with an onsite generator for an emergency back-up power source. Several upgrades are also included for code and regulatory compliance as well as operational efficiency including: rehabilitation or replacement of discharge piping; installation of trash capture devices; upgrading electrical control panels and accessories to current standards; replacing Supervisory Control and Data Acquisition (SCADA) controls, which includes the installation of a flow meter; inlet and wet well improvements; and addressing other pump station rehabilitation items identified in the feasibility study.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure of the Wastewater Utility. Failure of this station to operate would result in flooding of the northeast portion of Sunnyvale.

Fiscal Impact

This project is funded by the General Fund

824341 - Wastewater Cost of Service Study

Originating Year:	2003	Project Type:	Wastewater	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

Every five years, the Utility Billing Division in the Department of Finance performs a cost of service study of the wastewater system to update and align the City's wastewater rates with the costs associated with providing service. Staff works with a consultant to develop a cost of service model and populate the model with current data. The study generates a cost of service for each customer class and recommends adjustments to the City's rates and rate structure to ensure costs are recovered on an equitable basis from the different customer classes.

The most recent analysis was done in FY 2017/18. This project provides funding to hire a consultant that will support staff's effort to refresh the analysis every five years. The study planned for FY 2022/23 was delayed so that the study can reflect the WPCP Master Plan updates. Staff is in the process to issuing a procurement for the next study to be conducted in FY 2025/26. After the FY 2025/26 study is completed, future studies will be completed every five years.

Project Evaluation and Analysis

City policy and state law require that the rates be periodically restructured in a way that equitably allocates program costs among rate payers (Council Policy 7.1.B.1.4). An alternative to using a consultant would be for staff to conduct the cost of service study. However, city resources and staff hours are not available for a project of this magnitude. If the project is not completed, it is possible that rates will not reflect actual costs, will not provide the complete cost-recovery needed to provide wastewater services, and costs may not be equitably allocated per city policy.

Fiscal Impact

The studies completed through this project will ensure utility rates are consistent with the true cost of providing the utility service and provide enough revenue to operate the utility. This is a requirement of Proposition 218, and the results of the analysis will be used to determine utility rates for each customer class. The next study is being delayed until FY 2025/26 so that the study can reflect the WPCP Master Plan updates.

825331 - Replacement/Repair/Rehabilitation of Sanitary Sewer System

Originating Year:	2006	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project is for repair, replacement, and rehabilitation of sewer pipes and associated appurtenances, including but not limited to, manholes, lateral piping, and surface restoration. The goal of this project is to reduce sanitary sewer overflows as well as reduce inflow and infiltration which results in higher treatment costs. Alternative technologies are evaluated to select the best, most cost-effective rehabilitation method for each location. These methods include traditional open-trench replacement as well as "trenchless" methods including pipe-bursting/replacement, or Cured-in-Place pipe lining.

The City has over 310 miles of sewer lines, ranging from 6 inches to 48 inches in diameter, and valued at over \$330M. Many of the sewer lines are over 50 years old and have reached the end of their useful life. Pipe failures have been increasing. Recent video inspection has revealed significant deficiencies at multiple locations that require rehabilitation to prevent failure.

Specific projects will be identified based on need from CCTV findings and as identified in the Wastewater Master Plan. The projects will be constructed in a three-year cycle, with the first two years for planning and design and the third year for construction. Projects will be built to fall within allocated budget, therefore linear footage of pipelines to be replaced/repared/rehabilitated will vary.

Project Evaluation and Analysis

This project is necessary to comply with regulatory standards which require agencies to rehabilitate and/or replace sanitary sewer system piping and associated components. The alternative to replacement of sewer pipes in poor condition would be to repair them segment by segment on an emergency basis. Public health and the environment could be threatened, and fines could be levied against the City, should overflows occur as a result of a structural failure. Further, repairing or replacing segments of pipeline on an emergency basis would be significantly costlier than scheduled replacements.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues. The projects will be constructed in a three-year cycle, with the first two years for design including permitting and the third year for construction. Projects will be built to fall within allocated budget, therefore linear footage of pipelines to be replaced/repared/rehabilitated will vary.

825362 - Replacement/Repair/Rehabilitation of Storm Drain

Originating Year:	2019	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project focuses on the repair, replacement, and rehabilitation of storm drain pipes and related infrastructure, such as manholes, catch basins, outfalls, and pump station forebays. The City maintains over 320 miles of storm lines ranging from 6 inches to 84 inches in diameter, many of which are over 50 years old. The project identifies and addresses necessary repairs based on condition assessments or the Wastewater Master Plan's Capital Improvement Program (CIP).

To ensure the most efficient and effective solutions, various technologies are evaluated for each location such as open-trench replacement, trenchless pipe-bursting or replacement, and pipe-lining. Since storm systems generally endure less severe conditions than sewer systems, they tend to have a longer lifespan.

Project Scope:

- o Repair, replacement, or rehabilitation of associated stormwater conveyance components, such as outfalls, pump station forebays, manholes, catch basins, grates, and lids.
- o A recent example includes the Remington Court storm drain outfall into Stevens Creek. Design of the Remington Court storm drain outfall into Stevens Creek was completed in 2021, with construction of the outfall repairs completed in December 2022. The project's environmental subconsultant has determined that the required environmental mitigation associated with the project has not yet been successful. As a result, the post-construction report to the Regional Water Control Board cannot be completed. The estimated cost to complete the necessary mitigation efforts, which include one year of plant maintenance and submission of the project completion report to the Water Board, is \$44,000.
- o Installation of new storm drain pipes and manholes to reroute approximately half the flow of an existing 30-inch storm drain that currently enters a 27-inch sanitary sewer.
- o Cured-in-place pipe (CIPP) lining to rehabilitate a damaged storm drain along Borregas Avenue.
- o A study to identify and prioritize sources of stormwater inflow into the sanitary sewer system is being finalized. This study will guide future capital improvement projects.
- o Activities such as condition assessments, cleaning, debris removal, and flow monitoring are conducted to diagnose structural or performance issues.
- o Video inspections are commonly used to identify locations needing replacement or rehabilitation.

Project Evaluation and Analysis

This project is essential to maintain effective stormwater conveyance and reduce the risk of system failures that could lead to flooding and property damage. Delaying or defunding this project could result in costly emergency repairs due to aging infrastructure.

Fiscal Impact

This project is primarily funded by the General Fund. \$450,000 is funded by the Wastewater Management Fund to cover 50% of a project that reduces stormwater inflow into an existing sanitary sewer.

825521 - WPCP Biosolids Processing

Originating Year:	2006	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Xi Jiang

Project Description/Scope/Purpose

The Water Pollution Control Plant (WPCP) Biosolids Processing project was initiated in 2009 to address the accumulation of biosolids (sediments) on the bottom of the WPCP Secondary Treatment Oxidation Ponds. This project provides funding for the removal, processing, and disposal of accumulated sediments from the Plant's Oxidation Ponds.

The WPCP Biosolids Processing project also provides funding for the dewatering and beneficial reuse of anaerobically digested biosolids from the Plant's solids handling process until new solids dewatering facilities are constructed as part of the ongoing Sunnyside Cleanwater Program (projected completion 2028).

The Biosolids Handling scope of work provides for the removal of pond solids by dredging and preconditioning before sending those biosolids to a centrifuge and belt press for dewatering. The WPCP Biosolids Processing project also provides funding for the dewatering and disposal of biosolids generated by the WPCP Anaerobic Digesters. After dewatering, those concentrated solids are hauled off-site for land application (beneficial reuse).

Funding can also be used to clean digesters when the same contractor provides one or both of the previously mentioned services (pond and/or digester solids processing). This is a cost and logistical advantage for the City as much of the same equipment is used in the cleaning process.

Project Evaluation and Analysis

The WPCP is a heavily regulated wastewater treatment facility with strict effluent discharge requirements. The ammonia concentration in the WPCP final effluent is one of the plant effluent limits. Reduced volumetric treatment capacity within the Oxidation Ponds due to solids accumulation can directly affect the ammonia removal ability of the ponds and, if not addressed, may increase the concentration of ammonia in the effluent.

Over the last decade, the WPCP held several technical meetings with scientists and engineers to determine the best course of action to minimize the chance of process failure of the Secondary Oxidation Ponds. During those meetings, it was concluded that dredging the ponds at a rate faster than accumulation is the most prudent approach.

The rate of capacity restoration of the ponds is slow and needs to be spread over several years. The anaerobic digestion of wastewater solids provides fuel for power generation and volumetric reductions of plant-generated solids. Both save operating costs associated with purchasing power, handling, and disposal of plant-generated biosolids.

Fiscal Impact

The project costs are reflected in the agreement with the current contractor providing the handling, processing, and disposal services. \$280,000 impacts in wastewater operation budget have been added to cover the ongoing hauling and disposal costs related to biosolids dewatering and disposal after 2027, once a new Thickening and Dewatering Building has been constructed.

825962 - SCVURPPP Contracting and Fiscal Agent - General Fund

Originating Year:	2019	Project Type:	Wastewater	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

The City of Sunnyvale is one of 15 members of the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). SCVURPPP was formed to implement the National Pollution Discharge Elimination Permit (NPDES) issued to the cities, county, and Valley Water who discharge storm water to the San Francisco Bay. These 15 agencies have signed a Memorandum of Agreement (MOA) and pay annual assessments to cover the cost of programmatic activities related to implementing the NPDES Permit.

The MOA provides for the selection of one of the members as the program's Contracting and Fiscal Agent. The Contracting and Fiscal Agent provides audited financial statements, billing, and payment services for SCVURPPP. It also acts as the awarding authority for any contracts that the agency is required to enter into.

Project Evaluation and Analysis

The City of Sunnyvale is providing billing and payment services for SCVURPPP and acting as the awarding authority for any contracts that the agency is required to enter into during the course of its normal operations under the MOA.

Fiscal Impact

Total costs of the project are covered by assessments to the SCVURPPP members. The City of Sunnyvale's assessment under the MOA is 7.25% of the total annual program budget.

Funding Sources

Revenue from this project goes to the General Fund. This project monitors Santa Clara Valley Urban Runoff Pollution Prevention Program reimbursement of reasonable and customary costs, pursuant to the SCVURPPP MOA.

Plans and Goals

828210 - Inspection Data Management and Handheld Data Entry Device Project

Originating Year:	2010	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Winola Cheong

Project Description/Scope/Purpose

This project is to update the data system used by, and to provide handheld data entry devices to, the Environmental Service Department's Environmental Compliance Inspectors and Lab/Field Technicians in the Regulatory Programs Division. This project will aim to integrate (or replace) the various databases currently used to manage inspection data, and enable inspection and sampling activities by inspectors to be recorded on a hand-held data entry device and uploaded to a database for further tracking, trend analysis, regulatory reporting, work scheduling, and enforcement actions. It will achieve greater efficiencies by making inspection data more readily available, reducing the possibility of human error in transcribing paper inspection reports to a database, minimizing the possibility of lost or misplaced paper files, and reducing the time needed to gather and store inspection data. Current methods are error-prone, slow, and consume staff time that could be better used for other critical tasks.

Project Evaluation and Analysis

Other water quality inspection programs in Bay Area cities already use such equipment and databases to handle their work. Newer and expanded requirements for various inspection types and business types, such as stormwater treatment features in new and redevelopment; trash reduction ; mercury management practices at dental practices; as well as long established commercial, and significant industrial user programs, have led to a growing inventory of businesses inspected with dynamic needs for reporting to regulatory agencies. This project will help the program keep pace with the increased needs.

Fiscal Impact

Operating costs are for software licensing and equipment replacement. These costs were derived from expenditures for a different hand-held data device project for Maintenance and Operations staff. Replacement is estimated at eight-year intervals but will be evaluated and updated when appropriate hardware/software platforms have been identified.

829070 - Lawrence Expressway Sanitary Sewer Rehabilitation

Originating Year:	2012	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

The Lawrence Expressway Sanitary Sewer trunk main (main) is a critical pipe for carrying sewage from the southern and eastern portions of the City and the Rancho Rinconada area of Cupertino to the Water Pollution Control Plant. The main, which was originally installed in 1963, has been impacted by corrosive sewer gases over the years and has reached the end of its useful life expectancy of 50 years.

A condition assessment and preliminary design report for the main was completed in 2016 which identified several defects, access issues, areas requiring heavy cleaning, and degraded portions of the sewer trunk main pipeline. Bids for construction of an Initial Project to address these immediate needs were received in late 2020. In addition, the 2015 Wastewater Master Plan indicates that a capacity increase is needed along this alignment, or along an adjacent corridor. An analysis to determine the preferred alternative is underway and a new project to fund the capacity improvements will be proposed once conceptual costs are known. If a capacity increase along Lawrence Expressway is preferred, this increase will likely involve installation of a parallel sewer rather than upsizing the existing sewer. For this reason, rehabilitation of the existing sewer is warranted.

Project Evaluation and Analysis

Not funding this project could result in a complete failure of the Lawrence Sanitary Sewer Trunk Main piping system. Due to the high volume of sewage that the line conveys, a failure of this magnitude could be an environmental disaster and the Lawrence Expressway roadway could potentially develop a sinkhole if the City takes no action.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues.

829100 - Sanitary Sewer Siphon Cleaning and Assessment

Originating Year:	2012	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Eric Evans

Project Description/Scope/Purpose

The City's sanitary sewer system includes 13 locations with inverted siphons, which are pipes that dip under obstructions such as roadways and creeks. Over time, these low points accumulate sediment and grease which must occasionally be removed. In 2023, all siphons were cleaned and inspected. All pipes were found to be in good condition. In the future, the smaller siphons (less than 12 inch diameter) will be cleaned by City field staff. Larger siphons (12 inch and up), which require more specialized equipment, will be cleaned and inspected via a contractor. This project will fund this periodic effort.

Project Evaluation and Analysis

Siphons must be cleaned and inspected to ensure proper function, and to prevent blockages due to sediment, grease, and potential damage of existing pipes. Such blockages may result in sewer overflows in nearby roadways or creeks, which may trigger regulatory fines.

Fiscal Impact

This project is funded by the Wastewater Infrastructure Fund.

830210 - Repairs to the Power Generation Facility

Originating Year:	2008	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Leonard Espinoza

Project Description/Scope/Purpose

The Power Generation Facility (PGF) at the Water Pollution Control Plant (WPCP) was built in 1997 with the gas management/controls system to generate power using three fuel sources: landfill gas, digester gas, and natural gas. Stricter emission requirements imposed by the California Air Resources Board and the Bay Area Air Quality Management District combined with the declining quality of landfill gas continue to raise the cost of operating the engines, requiring frequent tune-ups and additional gas pre-treatment.

Over the last few years there were several instances when the engines "dropped" off the power distribution grid, resulting in immediate demand for PG&E, who provides back-up power. The instantaneous load results in significant cost increases in the WPCP utility bill, estimated at \$80,000 to \$100,000 per year in demand charges and peak day pricing. Additionally, legislation and regulation are currently being considered to further reduce emissions associated with combustion power generation for the WPCP engine types.

The scope of this project includes ongoing rebuilds and preventative measures to ensure reliable engine operations and adherence to emission regulations. A new PGF is being contemplated as part of the WPCP rebuild and is anticipated to be on-line by 2030.

Project Evaluation and Analysis

PGF is currently scheduled to be replaced in the 4 - 5 years. This project is proposed to complete more rigorous re-builds of the engines and replacement of the associated components to ensure compliance with the air regulations as well as reliable operations until the new facility is completed.

The digester gas dryer, and PGF engine gas flowmeters were replaced in FY 2022/23 and FY 2023/24. Overhauls to the top end of the engines are necessary each year for optimal emission performance.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues.

830220 - Repairs to the Tertiary Process

Originating Year:	2008	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Leonard Espinoza

Project Description/Scope/Purpose

This project funds the rehabilitation of the tertiary treatment process at the Water Pollution Control Plant (WPCP). Master Planning for the WPCP rebuild has identified that the tertiary process at the facility will most likely not change in technology. However, electrical and instrumentation upgrades will be needed in the future to integrate with the new treatment plant along with rehabilitation of existing equipment.

In the interim, some extensive rehabilitation is necessary to maintain operations of the WPCP and compliance with the City's National Pollutant Discharge Elimination System (NPDES) permit. The tertiary process of the WPCP consists of four Dual Media Filters (DMF), which are large tanks filled with sand and anthracite coal that provide filtration, and disinfection facilities consisting of chlorine contact tanks. This project will only address items not included in the scope of the Cleanwater Program plant rehabilitation projects.

Project Evaluation and Analysis

Project implementation is phased over several years to allow for continued operation of the WPCP and sequencing of the processes and equipment to ensure adequate processing capacity for the incoming wastewater. Mechanical, electrical and control system evaluations were conducted, and the final condition assessment report was used to develop and design the Existing Plant Rehabilitation Project. Due to the Existing Plant Rehabilitation Project Budget constraints some identified areas in the condition assessment report were excluded from the project. Project items identified that may be addressed in this project are the Tertiary Controls System repairs, Filtered Water Pump replacements, coatings and DMF media replacements. Pond effluent flow bypass pipping is essential for the operation of the tertiary system. Funds may also be used for modifications of the emergency pond effluent bypass piping installation.

Fiscal Impact

The project is funded by Wastewater Management Fund revenues. Existing implementation funds are proposed to support rehabilitation or replacement of the tertiary process equipment through FY 2025/26 in alignment with the Plant Rehabilitation.

830260 - Sanitary Sewer Salinity Reduction Study

Originating Year:	2014	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Mansour Nasser

Project Description/Scope/Purpose

This project funds a study that will identify sources of direct Inflow and Infiltration (I&I) of ground water into the sanitary sewer collection system. I&I contributes to additional hydraulic loading in the collection system which increases treatment costs as well as reduces design collection system conveyance capacity. I&I causes poor recycled water quality. The City is currently producing recycled water with a higher than average salinity content, which is affecting the overall quality and usability of recycled water for certain applications. The current sewage treatment process used by the City is not effective at removing salinity.

Several neighboring cities have been successful at reducing salinity and treatment costs by identifying and correcting sources of groundwater I&I. The first phase of this project will conduct a feasibility study to identify sanitary sewer pipe segments where I&I is occurring. Conductivity monitors are deployed at strategic locations in the collection system where I&I is suspected. The information collected by conductivity meters identifies pipe segments where high salinity is occurring, which is generally indicative of an I&I source. Pipe segments are typically recommended to be rehabilitated to eliminate the I&I source. The most common method of pipe rehabilitation to correct I&I sources is cured-in-place pipe lining, but replacement and/or spot repairs may be necessary as well. This study may result in additional funding needs based on study findings.

Project Evaluation and Analysis

This project will identify sources of groundwater I&I, which may be affecting the quality of recycled water produced by the WPCP. The sanitary sewer collection system and the WPCP stand to benefit from this project by improving recycled water quality and reducing treatment costs associated with additional hydraulic loading. The reliability of the collection should also be improved as capacity in the system will be increased with the reduction of the additional hydraulic loading.

Failing to undertake this project would result in increased treatment costs to improve recycled water quality. It could also result in illicit sewage discharges from the sanitary sewer collection system due to hydraulic overloading which would have adverse public health and environmental impacts, as well as result in regulatory penalties and fines.

Fiscal Impact

This project is funded by the Wastewater Management Fund. This project is necessary to minimize treatment costs and improve recycled water quality. FY 2022/23 project funding will be used to see the project to completion in FY 2025/26.

Funding Sources

Wastewater Management Fund

831390 - CFD No.3 - Ten Year Infrastructure Improvements Plan

Originating Year:	2016	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Winola Cheong

Project Description/Scope/Purpose

Community Facilities District (CFD) No.3, a special taxing district established in Sunnyvale to fund the construction and maintenance of public infrastructure, is mandated by the State's stormwater permit to maintain twenty stormwater biotreatment basins, which require rehabilitation of infrastructure every ten years. This includes the replacement of plants and drainage materials. The most recent rehabilitation was completed in FY 2023/24. The next round of rehabilitation is scheduled to occur in FY 2033/34, then again in FY 2043/44.

Project Evaluation and Analysis

The City's landscape vendor for CFD No. 3 completed the FY 2023/24 rehabilitation at a total cost of approximately \$80,000. For the FY 2033/34 and FY 2043/44 rehabilitation cycles, we propose allocating a comparable budget, adjusted for inflation and cost escalation.

Fiscal Impact

This project is funded through an annual property assessment of homes located within CFD No. 3. Project expenditure is limited to funds collected under CFD No 3.

Funding Sources

Community Facilities District No. 3 (Estates at Sunnyvale) Fund

831620 - Repairs to the WPCP Support Facilities

Originating Year:	2016	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Leonard Espinoza

Project Description/Scope/Purpose

A new Water Pollution Control Plant (WPCP) Master Plan is currently in design and will identify facilities that will be reconstructed over the next 10 to 15 years, existing buildings and supporting structures need rehabilitation to make them last until the new structures are built. These various support facilities will require updates to heating, ventilating, and air conditioning (HVAC) related equipment upgrades, roof and restroom repairs plus painting of various structures and equipment are included in this project

The proposed budget includes funding for a canopy at the Sodium Bisulfite pump station. The sodium bisulfite pump station is subject to the elements, water intrusion into the pump controls and the electrical system has caused pump failures. Temporary corrective measures are in place until a permanent structure can be installed. Due to the pump station location the installation of the new canopy will follow the completion of the planned flood wall.

Project Evaluation and Analysis

The WPCP has several buildings and facilities that are in varying states of decay, as the buildings are over 40+ years old and are in need of replacement.

Fiscal Impact

This project will be funded by Wastewater Management Fund revenues.

Funding Sources

Wastewater Management Fund

831680 - Adjust Sewer Utilities In Support of Paving Projects

Originating Year:	2016	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for wastewater utility surface access adjustments in order to preserve consistent height with surfaces and roadways. Wastewater utility surface access features include manholes, clean out and inspection covers, drainage inlets, and other wastewater infrastructure surface access points. Wastewater utility surface access points can be impacted by street rehabilitation activities and other excavation projects.

Paving rehabilitation projects generally have an effect on the elevation of the surfaces of existing utility access assets. This project provides funding for the adjustment of utility access infrastructure with paving rehabilitation with both contracted and in-house projects. Additionally, the City performs utility access surface restoration as a result of public inquiry, unsafe condition, other misalignment, or in conjunction with other operational activities. This project will also provide funding for the purchase of new wastewater utility surface access covers that are worn out, damaged, structurally compromised, or those that are not able to be reinstalled.

Project Evaluation and Analysis

This project will ensure that wastewater utility surface access assets are maintained and restored in a manner that is consistent with City standards. The project will also ensure that wastewater utility surface access assets are able to be restored to a condition that allows for the smooth travel of vehicles and bicycles on roadways and other surfaces where utility access covers are not uniform.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues.

831730 - WPCP Oxidation Pond Levee Rehabilitation

Originating Year:	2016	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The Water Pollution Control Plant (WPCP) Oxidation Pond Levee Rehabilitation project provides funding for site assessments, weed abatement, levee repairs, levee maintenance, levee road maintenance, and other levee related work to keep this critical asset sound for the next 20 years. These levees form the containment, flow paths, and pumping structures that make-up the WPCP Secondary Treatment Process. The levee roads allow the public to enjoy access to the lower south bay slough systems while keeping the Bay and Storm water from entering the WPCP Secondary Treatment process.

The oxidation ponds are contained by approximately eight miles of earthen levees formed by clamshell dredging and compaction. The WPCP levee system has not had any significant rehabilitation since the ponds were commissioned in the late 1960s. The network of levees has become significantly overgrown vegetation and significant erosion has occurred along the levee roads. The proposed weed abatement will remove all vegetation (estimated at approximately eight acres) from the levees and manage regrowth overtime. Also, this project will also rehabilitate sections of the levee roads which have become significantly worn and eroded.

The design consultant selection of WPCP Oxidation Pond Levee Rehabilitation project is underway. The project will develop construction plans to rehabilitate and repair the various deficiencies along the interior eastern levee of the Oxidation East Pond. Design is underway and is expected to be completed in FY 2025/26 and construction is anticipated in FY 2026/27.

Project Evaluation and Analysis

A city-wide condition assessment study was conducted of city structures. WPCP oxidation pond levees were included in this study. Areas along the levees were identified for repair in this condition assessment study. The information in the condition assessment was used to create the WPCP Pond Levee Operations and Maintenance manual. Rehabilitation projects may include, but are not limited to, structurally reinforcing the levees, repairing breaches and cracks, removing weeds, and raising subsided sections of the levees. On-call engineering firms will provide construction management support and outside contractors will perform the repair work. Segments with the highest likelihood of impact will be given priority.

Additional funding needed to complete repairs to South, West and completion of the East pond levees. Cost estimates have now been refined based on actual construction costs of one section of levee repair. Costs estimates for the West levee repair range from \$650,00 to \$1,820,033 depending on repair option chosen. The cost estimate to repair the remaining section of the East levee is \$4.5M based on the HDR Engineers design memo. A rough cost estimate of \$4M for the repair of the south levee is based on in house repairs per Operations and Maintenance manual.

Fiscal Impact

The initial cost estimate indicated up to \$27M would be needed for all repairs identified in the engineering report and the most urgent repair work is budgeted and underway. Additional funding would be required to address all repairs. The twenty-year budget is based on oxidation pond weed abatement costs and in house levee repair projections.

833050 - Wastewater Master Plan Update

Originating Year:	2018	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Eric Evans

Project Description/Scope/Purpose

This project provides funding for an update to the master plan for the sanitary sewer system and storm drain system. The project will assess the hydraulics, system models, physical condition, and separation and maintenance of the collection systems, and will recommend improvements to provide adequate hydraulic capacity and improve the reliability of the collection system. It will include an analysis of the financial impacts of the recommendations and scheduling, and may inform revisions to Project 825331 - Replacement, Rehabilitation, and Repair of Sewer Pipes.

The City provides sanitary sewer services to residents and businesses within the City as well as a portion of Cupertino known as Rancho Rinconada. This study is needed to define the capital projects that will be necessary to replace aging infrastructure and to identify any capacity-increasing projects that may be needed as a result of in-fill development. This type of plan is considered to be a best management practice for ensuring that the wastewater collection system can continue to provide reliable service.

A sewer master plan including hydraulic models for the storm and sanitary systems was completed in FY 2014/15. This project will update the models and analyze and develop alternatives for future wastewater capital projects and funding.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure of the Wastewater Utility that excludes the WPCP. The information developed as a result of this study can allow the City to require developers to pay for capacity increases or for rehabilitation of existing sewers. This project will also fulfill several regulatory requirements for wastewater asset management.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues. When completed, the master planning effort will likely result in new project recommendations that will be proposed in future capital improvements budgets.

833060 - WPCP Annual Digester Cleaning

Originating Year:	2017	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Xi Jiang

Project Description/Scope/Purpose

The City of Sunnyvale Water Pollution Control Plant (WPCP) provides wastewater treatment for the residents and businesses within the city. The Primary treatment process removes solids in the influent. Those separated solids are collected and sent to the anaerobic digestion treatment process.

Over time, the WPCP Digesters accumulate debris. This debris impedes the operation of digester equipment and decreases the solids reduction efficiency. Digester Cleaning is required at regular intervals to ensure that the city's anaerobic digesters have sufficient treatment capacity and to protect digester equipment from damage. During the cleaning process, Digesters are taken out of service, and a contractor is hired to break up and remove the fixed debris and other inorganic material trapped in the digesters. The contractor also dewater trapped biosolids during the cleaning process and hauls them off-site for proper disposal.

Project Evaluation and Analysis

Task-specific contractor equipment and specially trained staff are required to handle digester cleaning safely and efficiently. The need to clean the anaerobic digesters increased when the WPCP upgraded and rehabilitated all four of the Plant's anaerobic digesters. These upgrades allow for better mixing, reduced solids, and increased digester gas production, all positive benefits. However, the trade-off with better mixing systems is more frequent cleaning. The current cleaning interval will be extended post-completion of the New Headworks Project, part of the Sunnyvale Cleanwater Program, and all the digesters have been cleaned at least once post-startup of the New Headworks and Primary Treatment facilities. The mechanical systems that are part of the new Headworks will remove most of the problematic material that currently ends up inside the digesters, decreasing the required cleaning frequency.

Fiscal Impact

This project is funded by the Wastewater Management Fund revenues. Cost projections are based on the current contract for the required service, and future costs are based on the market rate for the same service. Under the current contract and the potentially reduced need when the new headworks treatment process comes online, approximately \$1.2 million in cost savings over the 20-year horizon is anticipated. The new Headworks has now been in operation close to a year.

833070 - WPCP Electronic Operations and Maintenance Manual

Originating Year:	2018	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Xi Jiang

Project Description/Scope/Purpose

This project scope funds the implementation of a web-based operations and maintenance (O&M) manual for the Water Pollution Control Plant (WPCP) that is similar to or the same as other document management systems the City uses. This project is intended to replace the limited, narrative-based paper O&M manual. The WPCP Electronic Operations and Maintenance Manual (EOM) project aimed to develop a living document, repository, and seamless interface. Regulations require O&M information to be readily available for training and as a response reference to keep plant personnel safe, the process compliant, and for systems to run as efficiently as possible.

When systems fail, the WPCP O&M team requires rapid access to accurate technical information. The new system is intended to reduce the time spent searching through folders, binders, and other documents that may contain obsolete information. This project also facilitates the capture and transition of institutional O&M knowledge from departing employees. The WPCP Electronic Operations and Maintenance Manual project also includes the procurement, installation, and implementation of an electronic logbook, another regulatory requirement, to increase operational efficiency further and simplify historical review of process changes and system troubleshooting.

Project Evaluation and Analysis

The City's WPCP Cleanwater program is replacing old wastewater treatment systems and updating existing ones. The information needed to operate and maintain these systems reliably must include an intuitive method of storing and retrieving any WPCP documentation. Changes in nearly every future process require operations and maintenance team members (that are turning over as well) to have access to a centralized, user-friendly interface to view standard operating procedures (SOPs), record drawings, equipment information, process control descriptions, operating manuals, regulatory information, and historical data from the Laboratory Information Management System (LIMS), Enterprise Asset Management System/Computerized Maintenance Management System (EAMS/CMMS) and Supervisory Control and Data Acquisition (SCADA). An electronic O&M manual would also facilitate training new employees, refreshing the knowledge of existing staff, and function as an up-to-date reference for a wide variety of information. The City's National Pollution Discharge Elimination System (NPDES) permit requires the wastewater treatment plant to furnish and maintain accurate O&M manuals, SOPs, and record drawings. These documents are necessary for the reliable operation, maintenance, and troubleshooting of treatment and support systems.

Fiscal Impact

This project is funded by the Wastewater Management Fund revenues. Costs are based on the amount of effort required to fully populate a digital platform, the transition from one system to another, and to procure an online logbook based on market availability.

833090 - Sanitary System Hydraulic Model Update

Originating Year:	2018	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Eric Evans

Project Description/Scope/Purpose

A sanitary sewer system hydraulic model is an essential tool for determining where existing sewer pipes may need to be upsized to accommodate existing and future development. The City completed an initial model in 2015, and then a much more detailed model in 2022. There is an ongoing need to update and refine the model as new information becomes available. A current model is necessary for project specific analyses including proposed new flows resulting from new development and discharges of groundwater into the sewer system during construction projects.

Project Evaluation and Analysis

The 2022 hydraulic model update identified sewer capacity improvement projects. However, the necessary sizes and locations of larger pipes, and the timing of when the projects should be implemented, were somewhat uncertain due to lack of wet weather flow data. Some wet weather data was collected in 2023. Proposed development and water billing data become continually available as time passes. This project will fund wet weather flow monitoring and ongoing consultant work necessary to update and operate the hydraulic model as needed.

Fiscal Impact

This project is funded by the Wastewater Capital Fund. During most years, costs are expected to be limited to consultant fees to update and operate the model, and to provide reports. Some years may also include wet weather flow monitoring.

Funding Sources

Wastewater Capital Fund

833091 - Storm System Hydraulic Model Update - General Fund

Originating Year:	2019	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Capital	Project Manager:	Eric Evans

Project Description/Scope/Purpose

A storm collection system model was prepared in FY 2014/15 and was limited to all pipelines 36-inches and larger plus smaller pipes as required to make connections. This project is to revisit the model and update it. This project will be done to coincide with the Project 833050 - Wastewater Master Plan Update.

Project Evaluation and Analysis

System modeling information is critical to ensure that necessary information is available to make the appropriate project planning decisions and determine system capacity. The storm modeling is critical in assessing how the storm system is performing and whether capacity improvements are needed.

Fiscal Impact

This project is funded by the General Fund.

834460 - Sewer Capacity Enhancement Projects

Originating Year:	2019	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2035/36	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

The 2022 Wastewater Collection System Model Expansion and Capacity Analysis identified updated preliminary sewer capacity projects, which superseded those outlined in the 2015 master plan. These 2022 projects were further refined using wet weather flow data, as well as updated water billing and development information, resulting in the two projects detailed below.

The design phases for CIP-1 and CIP-2 are planned for FY 2025-26 and FY 2031-32, respectively. Ongoing analysis and data collection may lead to adjustments in the timing and scope of CIP-2.

CIP-1: Arques Lift Station Project

- Install a new pump system and power supply, potentially including a new wet well.
- Inspect the existing force main and perform any necessary repairs.

CIP-2: California Ave. to Arques Ave. Capacity Project

- Replace the existing 21" pipe with 24"-30" pipe to increase capacity.

Project Evaluation and Analysis

Many existing sewer lines are not large enough to carry existing peak flows. Upsizing of sewer lines is necessary to reliably convey the wastewater to the Water Pollution Control Plant, prevent sewer overflows, and accommodate future growth.

Fiscal Impact

This project is funded by Wastewater Management Fund revenues.

834720 - Laboratory Certification Update

Originating Year:	2019	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Xin Xu

Project Description/Scope/Purpose

This project funds the transition of Laboratory protocols and practices to address new standards for Laboratory Certification, adopted by the State of California. ESD's Lab provides water quality testing for both drinking water and wastewater, and certification is required for both services. The new standards have been implemented since December 2023. The project now supports validating implementation and evaluating ongoing workload impacts based on actual implementation.

Project Evaluation and Analysis

The Water Board has adopted comprehensive regulations for the Environmental Laboratory Accreditation Program (ELAP) to modernize the program and enhance data quality for California communities. ESD's laboratory, having obtained analytical certificates in compliance with ELAP requirements, will continue to adhere to these standards. However, it is essential to recognize that maintaining a robust quality control and quality assurance system remains crucial to ensure ongoing compliance and the highest level of data integrity.

Implementing the new certification standards requires significant additional work to maintain a robust quality control program including much more documentation. The funding of a Limited Term position provides more stable staffing to support the implementation as the department evaluates how needs may change with implementation experience.

Fiscal Impact

This project is funded by Wastewater Management Fund and Water Supply and Distribution Fund revenues. Funding proposed is for 50% of a Limited Term Lab/Field Tech for FY2023/24 through FY 2025/26. The other half of the funding for this position is available in the Operating Budget for ESD Program 14705 Environmental Laboratory.

The ongoing funding in the Lab's Operating Budget has been used for temporary agency staffing. The Limited term approach provides valuable and stable staffing to support new standards implementation.

834750 - Peery Park Specific Plan Wastewater Capacity Improvements

Originating Year:	2018	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

On September 20, 2016 Council approved the Peery Park Specific Plan. The plan calls for developers to pay \$3.12/net new square foot of development to be put towards wastewater infrastructure improvements to accommodate increased development in the Peery Park area. The sewer projects identified in 2016 were superseded by projects presented in the 2022 Wastewater Collection System Model Expansion and Capacity Analysis.

The first project along West Moffett Park Drive is scheduled to begin design in FY 2027/28, with construction to follow in FY 2028/29. The second project along North Mathilda Avenue is scheduled to begin design in FY 2030/31. The scope and timing of the North Mathilda project is expected to be adjusted as newer sewer flow, water consumption, and development data become available in the coming years.

Project Evaluation and Analysis

Many existing sewer lines are not large enough to carry existing peak flows. Upsizing of sewer lines is necessary to reliably convey the wastewater to the Water Pollution Control Plant, prevent sewer overflows, and accommodate future growth.

Fiscal Impact

Funding for this project is provided by fees assessed to developers within the Peery Park Specific Plan area. As newer data becomes available, one or more additional capacity projects, and/or revisions to currently identified projects, may be proposed.

835480 - Baykeeper Litigation Expenses

Originating Year:	2020	Project Type:	Wastewater	Department:	110 - Office of the City Attorney
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Rebecca Moon

Project Description/Scope/Purpose

All costs are associated with active litigation regarding alleged non-compliance with the Stormwater Permit and potential leakage from the sanitary sewer collection system into the stormwater system causing or contributing to exceedances of water quality objectives for bacteria in local waterways. Litigation costs include the City's attorney's fees, expert witness fees, and other costs associated with discovery, trial, and appeal (the trial is currently scheduled to commence on June 10, 2025). This project also includes payment of an interim attorney's fee award that the City was ordered to pay to the plaintiff on September 17, 2024, in a total amount of \$865,170.77 (Sunnyvale's share, split 50-50 per agreement with the City of Mountain View, was \$432,585.39)

Project Evaluation and Analysis

In February 2020, Baykeeper filed suit against the City of Sunnyvale and the City of Mountain View alleging violations of the Clean Water Act/non-compliance with the Stormwater Permit due to bacteria discharges above water quality standards. Plaintiff alleges the potential that such discharges are the result of leakage from the sanitary sewer collection system into the storm drainage system as described above. This project funds outside litigation costs due to the complex nature of the case. In the event of settlement or judgment, a separate fund will be established.

Fiscal Impact

Funding included in this project covers attorney fees. If the case settles before trial, the full amount of \$750,000 will not be necessary. In the event of settlement, a separate project would be established to fund commitments under the settlement agreement.

835991 - Cupertino Sanitary District Sewer Flow Diversion

Originating Year:	2021	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Mansour Nasser

Project Description/Scope/Purpose

The City of Sunnyvale provides sewer service to a subdivision of 91 homes in the City of Cupertino and Valley Water requested the City remove the existing sewer pipe bridge due to a Calabazas Creek improvement project. This project will include removing the sewer bridge and diverting sewage flow from 91 homes to Cupertino Sanitary District (CuSD) pipe system, and diversion back into City of Sunnyvale pipe system. An executed agreement between the City of Sunnyvale and Cupertino Sanitation District outlines the responsibilities for the project.

Project Evaluation and Analysis

This project was prompted by Valley Water to remove an existing City sewer pipe bridge from Calabazas Creek serving 91 City homes. The City needed to find an alternative routing of the sewage flow away from the bridge. The City negotiated an agreement with Cupertino Sanitary District to divert the flow from the 91 homes into their system. This project will fund the diversion of the flow, for the City to receive the flow back at a different location. Other options considered would have still required the sewage flow to cross the Creek and were deemed cost-prohibitive.

Fiscal Impact

The cost to remove the bridge and make appropriate improvements is estimated at \$115,000. The agreement with CuSD will not affect the level of service provided to the residents of the 91 homes and the transfer will be seamless with no interruption in service. The City will continue to respond to service calls and perform any facility improvement within the subdivision.

836230 - Sewer System Management Plan

Originating Year:	2023	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Winola Cheong

Project Description/Scope/Purpose

The State Water Resources Control Board, which regulates sanitary sewer systems issued a statewide Order 2022-0103-DWQ on December 8, 2022 updating sanitary sewer systems regulations. The City of Sunnyvale as an operator of a wastewater collections system is required to prepare a Sewer System Management Plan (SSMP) by 2025 and every five years thereafter.

Project Evaluation and Analysis

The SSMP is aimed at reducing sanitary sewer overflows and should includes elements demonstrating how the City constructs, manages, operates and maintains its sanitary sewer system.

Fiscal Impact

\$100,000 will fund the services of a consultant to prepare the SSMP. This project is funded by Wastewater utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide Wastewater service.

836380 - WPCP Digester No. 3 Improvement Project

Originating Year:	2023	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The Digester No.3 Improvement project will repair the failed interior and exterior annular tank lid seal. This seal prevents methane gas which is collected at the top of the tank from leaking out to atmosphere. In order to increase the life of the epoxy seal the tank lid skirt which extends into the tank will be lengthened to prevent exposure to the methane gas. In addition, a new larger side hatch will be installed similar to the Digester 1 and 2. The removal of the tank lid will facilitate the hatch installation. The larger hatch will facilitate safer entries into the tank by plant staff and contractors.

Project Evaluation and Analysis

This project was initially developed for construction under the plant Maintenance program. However, due to the scale of the project it has been determined that a Public Works project is needed to complete the project. The design and construction estimate has been completed by an outside engineering firm. This digester is currently operating under a very constrained operating level due to the failed seal. The start of construction will be coordinated with the Water Pollution Control Plant (WPCP) construction around the Digester No.3 due to limited space.

Fiscal Impact

This project is funded by Wastewater Fund utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide Wastewater service. Funds from project 836390 - WPCP Chemical Tank Storage Facility - were moved into this project.

836390 - WPCP Chemical Tank Storage Facility

Originating Year:	2023	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Leonard Espinoza

Project Description/Scope/Purpose

This project consists of the construction of a new permanent chemical storage tank facility consisting of one chemical storage tank with chemical dosing pump skid. The permanent chemical storage facility is to be constructed to accommodate all health and safety requirements. Chemical treatment is needed to treat pond effluent water With changing pond water quality in the future, the plant needs to have the capacity to store chemicals to treat this pond effluent.

Project Evaluation and Analysis

About six months ago, temporary chemical tanks were installed to test the effectiveness of multiple chemical regimes to mitigate the pond algae. In the last couple of years, the ponds have been propagating a single cell, sub-micron blue-green algae species in high quantities. This algae and other solids are typically taken out in our Air Flotation Tanks (AFTs) after the wastewater returns to the plant from the ponds, however, due to the small size of this unique algae, the AFTs have not been able to take it out this algae. This has resulted in the plant's ability to meet its National Pollutant Discharge Elimination System (NPDES) permit limits difficult. In fact, the plant violated its NPDES permit limit 5 times this past summer. Each violation can result in a \$3,000 penalty. The new chemical regimes have proven to be effective, however, a permanent tank storage facility is needed to store the chemicals. This includes a permanent concrete pad, one chemical storage tank and dosing station. The current temporary chemical storage tanks have an engineered useful life of about 2 years in the current construction.

Fiscal Impact

This project is funded by Wastewater utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide Wastewater service.

The funds from this project were moved into Project 836380 - Digester 3 Improvements.

836440 - Abandonment of Rancho Rinconada Sewer Line Segment

Originating Year:	2022	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Tim Kirby

Project Description/Scope/Purpose

This project will fund the abandonment of a small section of Sunnyvale's sewer line. In the 1950s, the City of Sunnyvale entered an agreement with developers that allowed the Rancho Rinconada sewer system to be tied into a City sewer main. This sewer main would serve a mostly residential area that did not have direct access to a sewer collection system. The sewer system was constructed to meet the City's standards and allowed the City to collect fees from homeowners and businesses to reimburse the City for the costs of providing ongoing sewer service. In January 2021, the City reached out to the City of San Jose to investigate a change that was made to the existing sewer main. This change included a new manhole which plugged Sunnyvale's pipeline. A new sewer pipe was constructed which diverted the flow into the City of San Jose's sewer system. After several meetings, both cities came to an agreement where the City of San Jose will pay the City of Sunnyvale \$800,000 to return the system to its previous condition. This change in systems will also require the abandonment of a small section of Sunnyvale's sewer line that is south of the new manhole.

Project Evaluation and Analysis

This project is required to properly abandon a section of sewer line that is no longer in use. This process is a regulatory requirement and needed to complete the transfer of a portion of the City's sewer system outside of the City to the City of San José.

Fiscal Impact

This project is funded by a settlement payment in the amount of \$800,000 received as part of the agreement to transfer the system.

837440 - Producing Recycled Water

Originating Year:	2025	Project Type:	Wastewater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Rohan Wikramanayake

Project Description/Scope/Purpose

The Water Pollution Control Plant (WPCP) operates a 440 acer oxidation pond system as part of the secondary treatment system. During early 2021, the pond system became dominated by a unicellular blue-green algae with a size range of 0.2 to 2 µm, which the plant processes could not remove. As a result, the plant violated its NPDES permit for solids discharge (10 NTU) on multiple occasions. Furthermore, prior to this incident, the plant produced approximately 1 MGD of Recycled Water (RW) for its customers. However, this has not occurred since we were unable to make the 2 NTU (much more stringent than the 10 NTU for the NPDES permit) requirement for RW - resulting in a reduction to the City's revenue base.

In the summer/fall 2024, the plant ran a pilot study with a Cloth Media Filter (CMF) feeding Dual Media Filter (DMF) effluent to produce RW. Based on the promising data generated from the pilot study conducted using the plant's own wastewater and the recovery of the City's revenue base, the installation of a CMF packaged plant to produce RW is recommended. Furthermore, the City will also achieve its sustainability goals.

Project Evaluation and Analysis

In the last 3 years, the City supplement potable water for RW. For FY 2022/23 and FY 2023/24, the lost revenue for the City from RW was about \$2 million per year. In turn, the City paid SFPUC/Valley Water a little over \$2 million per year for their potable water delivered through the City's recycled water system. If we were to produce RW in its entirety, we would no longer need to purchase water for the recycled water system. The cost of RW production at the plant is about \$500,000 per year.

Fiscal Impact

It is expected that the City will recover the costs of this project within two years by reducing the amount of water purchased for resale. This project is funded by Wastewater Infrastructure Fund.

THIS PAGE IS INTENTIONALLY BLANK

STORMWATER

THIS PAGE IS INTENTIONALLY BLANK

Sunnyvale provides stormwater collection management services to guard against flooding. Minimizing pollutant discharge from the City's storm drain system to local creeks and channels is a principal regulatory obligation for the City. While most activities for stormwater management are currently funded by the General Fund, those that address trash as a stormwater pollutant, such as street sweeping and management of trash capture devices, are funded by the Solid Waste Enterprise Fund.

MAJOR STORMWATER PROJECTS

The current budget includes projects aimed at maintaining the infrastructure for safely conveying stormwater and implementing programs and services to ensure compliance with environmental regulations.

Stormwater Collection System. In general, the collection system projects related to storm-water management address critical and immediate needs. Projects address [storm system pipes and inlets](#), [storm pump stations](#), and [outfalls](#) to local creeks and channels.

Stormwater Permit Compliance. Unlike wastewater management, stormwater management in California does not typically include centralized treatment plants. Stormwater regulations have historically focused on the implementation of practices that prevent pollutants from entering the system, and thus avoid polluted discharge to local waterways. In the last 15 years, regulations have shifted to also include infrastructure that intercepts trash and other pollutants and the implementation of "green stormwater infrastructure" that employs specially designed landscape features to filter and treat water before entering the stormwater collection system.

829081 - Storm System Trash Control Devices

Originating Year:	2019	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Emma Hinojosa-Moffatt

Project Description/Scope/Purpose

The City stormwater system operates under the Municipal Stormwater National Pollutant Discharge Elimination System (NPDES) permit (Stormwater Permit or MRP), the core purpose of which is to minimize pollutants from storm systems into local creeks, channels, and the Bay. Provision C.10 of the current permit requires actions to reduce trash coming from the system into local waterways, with specific reduction milestones. If a municipality cannot meet the 100% requirement by June 2025, they must submit a notification of non-compliance and a plan with a timeline to meet the 100% requirement and be subject to potential enforcement action from the Regional Water Quality Control Board. Implementation actions can include a variety of pollution prevention programs and the installation of structural devices into the storm system that prevent the trash from entering the system and polluting creeks and the Bay. The installation of five large devices at four locations and the installation of more than 500 small devices are complete with upcoming projects focused on additional smaller devices.

The City developed a Trash Plan in 2014 that identifies trash generating areas and actions to be implemented in specific areas. For structural devices, the areas anticipated to be addressed included approximately 700 small devices in public inlets in trash management areas not consistently achieving trash reduction targets with source control actions. Areas remaining for trash device installation include portions of Mary Ave. and Moffett Park; the Downtown area; around schools; in high density neighborhoods; adjacent to commercial properties; and in remaining moderately littered areas.

Project Evaluation and Analysis

This project helps the City comply with the terms of the Stormwater Permit for trash reduction. This project is specifically for the structural device actions included in the plan. In several areas, previous programmatic approaches have been tried but do not consistently result in meeting the trash reduction target; staff are therefore pivoting to additional trash capture devices as a more reliable compliance approach.

The new MRP includes updated targets of 90% reduction by June 2023 and 100% by June 2025. For the approach to demonstrating compliance, the MRP removed some key tools used during the previous permit period, most notably the use of source control credits for product actions that address commonly littered items (such as single-use bags and expanded polystyrene containers). With these changes, the City's current performance as of June 2024 is 94% reduction.

To meet the 100% reduction target, the installation of an additional 100 - 200 small trash capture devices (to be installed in individual storm drain catch basins) is needed. In a small number of locations, the available devices do not work. For those locations, additional measures may be needed to achieve the permit target.

Fiscal Impact

This project is funded by the Solid Waste Capital Subfund. Additional funds may be needed to achieve the requirements of the new permit. Staff are implementing a new round of small device installations this year and will update project estimates for the next budget cycle if needed.

831511 - Green Stormwater Infrastructure Implementation - General Fund

Originating Year:	2019	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The City's storm sewer system is managed in accordance with a National Pollutant Discharge Elimination System (NPDES) Permit issued by the Regional Water Quality Control Board. The permit is a Municipal Regional Permit for Bay Area storm systems, referred to as the MRP. Among the permit priorities is the implementation of Green Stormwater Infrastructure (GSI), using engineered, landscaped-based design to treat and retain rainwater from impervious surfaces before discharging to local creeks and channels, and ultimately the Bay. Earlier iterations of the MRP referred to GSI roadway projects as Green Streets. The long-term objective is to retrofit the urban landscape with green infrastructure over time.

This project provides funding to support planning, design, and construction of GSI retrofit projects, primarily implemented as part of roadway projects. Project funding can be leveraged as matching funds for grant opportunities. Completed projects include the Caribbean Drive Green Street Project as part of the Sunnyvale Cleanwater Program's Bay Trail Access Relocation project (local match for EPA funding) and Persian Drive (GSI match for sidewalk completion project). Current project activity includes GSI at Wolfe and Stewart as part of the East Tasman area intersection improvements.

Project Evaluation and Analysis

Implementing GSI as an augmentation to projects where roadways or sidewalks will already be disturbed is a more cost-efficient way of integrating GSI and meeting permit requirements. Leveraging grants when possible offsets the City's capital investment in these types of projects. Projects supported by this funding can also potentially serve as banked GSI in an "alternative compliance" option for public and private development projects that have difficulty meeting the stormwater requirements on the project site. Staff will consider such a program during the current permit term.

Fiscal Impact

This project is funded by the General Fund.

831691 - Storm System Trash Reduction Programs

Originating Year:	2019	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Emma Hinojosa-Moffatt

Project Description/Scope/Purpose

The City's stormwater system operates under the Municipal Stormwater National Pollutant Discharge Elimination System (NPDES) permit (Stormwater Permit or MRP), the core purpose of which is to minimize pollutants from storm systems into local creeks, channels, and the Bay. This project implements trash reduction programs and maintenance activities in order to meet permit requirements. The current MRP became effective July 1, 2022, and required 90% reduction by June 2023 and 100% (or zero impacts) by June 2025. Implementation actions can include pollution prevention programs, business inspection programs, cleanup activities, and the installation of structural devices into the storm system that prevent the trash from entering the system and polluting creeks and the Bay. In addition, municipalities must ensure that private properties that drain into the City's system implement controls to achieve full trash capture.

The City developed a Trash Plan that identifies the trash generating areas of the City and specifies actions to be implemented. In some areas, those actions specify maintenance, cleanup, and engagement activities to reduce litter before it enters the storm system. This project funds the startup of these non-infrastructure activities. Beginning in FY 2023/24, this project funds 75% of a limited term Environmental Compliance Inspection position (with remaining funding in Project 835910 Stormwater Permit Implementation).

Project Evaluation and Analysis

This project helps the City comply with the terms of the Stormwater Permit for trash reduction. While the program has implemented source reduction and pollution prevention programs, progress in several areas has not consistently achieved full trash capture, so addition trash capture devices will be needed (Separate Project 829081 Storm System Trash Control Devices). This project will continue to support trash inspections and working with private properties to implement practices or storm drain devices in their on-site drains to meet the permit requirements.

Fiscal Impact

This project is funded from the Solid Waste Management Fund.

835010 - Green Stormwater Infrastructure Plan Implementation

Originating Year:	2019	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Richard Chen

Project Description/Scope/Purpose

The City's storm sewer system is managed in accordance with a National Pollutant Discharge Elimination System (NPDES) Permit issued by the Regional Water Quality Control Board. Among the permit priorities is the implementation of Green Stormwater Infrastructure (GSI), using engineered, landscaped-based design to treat rainwater from impervious surfaces before discharging to local creeks and channels, and ultimately the Bay. The long-term objective is to retrofit the urban landscape with green infrastructure over time. The 2015 MRP required the development of a GSI plan to the City's efforts to integrate stormwater treatment features into public and private projects. Sunnyvale's GSI Plan was approved by the City Council and submitted to the Regional Board in September 2019.

The current MRP, which became effective July 2022, requires each municipality to implement a targeted amount of GSI as retrofit projects, beyond what is already required for new and redevelopment projects. The numeric target for Sunnyvale is to implement GSI projects that treat a total of five (5) acres by the end of the permit term. Project funding supports periodic evaluation of GSI potential in public projects, including preparation of concept plans to facilitate timely implementation of the GSI projects. Funding may also be used to evaluate locations for a potential "regional project," which would treat a drainage area vs individual property sites. The majority of funding is for GSI project design and construction.

Project Evaluation and Analysis

This project will ultimately result in GSI projects that treat at least five (5) acres of impervious area. Site assessments will identify locations where stormwater treatment features may be sited within a project, a preliminary evaluation of feasibility and potential barriers such as utility conflicts, and a planning level assessment of project benefits and costs. Based on the assessment results, individual projects will be funded, with design and construction of the GSI elements of the projects funded by this Project. For example, renovation of Serra Park is planned to include GSI as part of the site design based on a completed feasibility assessment and conceptual plan. Funding for the GSI portion of the project will be transferred to the Serra Park Project upon contract award by the City Council. As this requirement is expected to continue and grow in future permit cycles, funding will also help assess opportunities for implementation beyond the current permit term.

Funding for FY 2026/27 includes an additional \$1M to restore funding previously approved and returned to the General Fund at the end of FY 2023/24. Rescheduling this funding better aligned with timing of expenditure and will demonstrate to the Water Board that sufficient funding has been approved to meet the 5-acre target. As projects are identified to achieve the five acre target additional funds will be sought as needed.

Fiscal Impact

This project is funded by the General Fund.

835450 - Stormwater-Wastewater Bacteria Control Program

Originating Year:	2021	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Emma Hinojosa-Moffatt

Project Description/Scope/Purpose

The City stormwater system operates under the Municipal Stormwater National Pollutant Discharge Elimination System (NPDES) permit (Stormwater Permit or MRP), the core purpose of which is to minimize pollutants from storm systems into local creeks, channels, and the Bay. Previously, Provision C.1 of the permit provided for a compliance pathway if new pollutant issues are identified. Sunnyvale submitted a Bacteria Control Plan to the Regional Water Quality Control Board in 2020, per Provision C.1 of the Stormwater Permit, to address potential discharges of bacteria from the storm system.

The new Stormwater Permit includes provision C.14 Bacteria Control for Impaired Water Bodies. Provision C.14.a. Enhanced Bacteria Control specifically requires Sunnyvale and Mountain View to implement actions to reduce bacteria inputs into waterways with bacteria exceedances. This project supports program activities to comply with this permit provision.

Funding will support the addition of pet waste stations, enhanced public outreach, water quality monitoring, investigation of potential sources of bacteria, and other actions to limit bacteria sources. Anticipated costs are consultant services, material and supply purchases, and contracted work.

Project Evaluation and Analysis

The new Municipal Regional Permit for stormwater discharge contains a requirement for cities to evaluate and implement programs to address bacteria discharges. As this work will at times involve interacting with disadvantaged communities, the City will seek to work with community groups that are best equipped to engage with these communities.

Fiscal Impact

The Stormwater Permit requirements for bacteria control require an iterative response; the scale and location for action is based on monitoring program results. Additional funding will likely be needed to address implementation needs for the full term of the permit, through FY 2026/27. (need to address in Phase 2 of this budget cycle)

835470 - Stormwater System Strategic Plan and Funding Evaluation

Originating Year:	2021	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Ramana Chinnakotla

Project Description/Scope/Purpose

This project will evaluate and aggregate the needs of the City's storm sewer system to provide a basis for seeking sustainable funding for the system as a discreet utility. The project will fund consultant services to develop a strategic plan or framework to aggregate the operation and maintenance as well as capital needs of the storm sewer system to convey storm flows to protect property and public health, and to discharge to local water ways in compliance with state and federal regulations. Community engagement or polling will be used to gage community priorities and support for funding approaches. The goal is to provide a framework that serves as the basis for sustainable resources to support stormwater management amid growing regulatory obligations, aging infrastructure, and potential impacts from climate change.

Project Evaluation and Analysis

The project will inventory and provide planning level cost estimates for various aspects of managing the storm sewer system, which includes storm drain inlets; pipes; treatment devices and features; pump stations; and outfalls. The elements to be considered will include but not be limited to: system cleaning, condition assessment, routine inspection, hydraulic modeling, system repair and rehabilitation, data management including GIS, pollution prevention programs, evaluation of impacts from climate change, stormwater permit compliance, and the array of activities needed to comply with federal and state regulation. The project will also support community polling and evaluate funding opportunities including the development of a property-related fee akin to the funding sources used to manage wastewater, water, and solid waste.

Fiscal Impact

The project will fund the strategic evaluation needed to substantiate securing funding such as through a property-related fee. Additional funding would be needed to implement a funding initiative, such as a property-related fee, if approved by the City Council.

Funding Sources

General Fund

Plans and Goals

- EM - Environmental Management - EM-8: Protection of Creeks and Bay
- EM - Environmental Management - EM-9: Adequate Storm Drain System
- EM - Environmental Management - EM-10: Reduced Runoff and Pollutant Discharge

835910 - Stormwater Permit Implementation

Originating Year:	2022	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Emma Hinojosa-Moffatt

Project Description/Scope/Purpose

The City stormwater system operates under the terms of a Municipal Regional Permit (MRP) for Stormwater discharge issued by the Regional Water Quality Control Board. This project supports the implementation of initiatives and services to comply with the MRP, which was reissued for its next five-year period, beginning July 1, 2022. The MRP includes a broad array of requirements that compel local agencies to minimize pollutant discharges from the City's storm sewer system to local creeks, channels, and the Bay. Key permit requirements supported by this Project include the expansion of stormwater treatment requirements to more development project types; Stormwater management at the City's corporation yard; enhancing pollutant control practices associated with fire-fighting; and beginning an asset management plan and updates to GIS data for the storm system.

This project is separate from and in addition to projects that already support the following elements of permit implementation: Storm System Trash Reduction, Green Stormwater Infrastructure, and Bacterial Control Program.

Project Evaluation and Analysis

The City stormwater system operates under the terms of a Municipal Regional Permit (MRP) for Stormwater discharge issued by the Regional Water Quality Control Board. Staff has conducted a review of the resource impacts of implementing the enhanced and new permit requirements which are expected to be effective in the first few years of the permit's five-year term. Additional evaluation will be conducted in preparation for future budget cycles on the impacts to resources for the remaining years.

Beginning in FY 2023/24, this project funds 25% of a limited term Environmental Compliance Inspector position (with the remaining funding in Project 831691 Storm System Trash Reduction Programs).

Fiscal Impact

Stormwater Permit activities are primarily funded by the General Fund. For this project, \$50,000 of the funding in the first two years is proposed to be funded by the Development Enterprise Fund to support program updates and updating guidance documents to reflect the expanded implementation of treatment requirements on more development project types.

One-time and limited term costs in this project are for consultant services, temporary staffing, and equipment needed for implementation. Personnel costs in this project include the funding of 0.25 FTE of a limited term Environmental Compliance Inspector to support new program activities related to PCBs controls on older industrial properties, and temporary management staffing to guide the consultant work for asset management and GIS updates for the storm system. The remaining 0.75 FTE is funded in Project 831691 - Storm System Trash Reduction Programs. As of FY 2024/25 the limited term Environmental Compliance Inspector position has yet to be filled due to staffing challenges.

Regional guidance is anticipated in early FY 2025/26 for asset management and enhancing pollutant control practices associated with fire-fighting with implementation expected soon after. Staff will continue to evaluate permit compliance costs for the full five-year term of the MRP and recommend adjustments as needed. The City will also continue to evaluate funding mechanisms for stormwater permit compliance needs.

Funding Sources

Primarily General Fund, except for \$50,000 to be funded by the Development Enterprise Fund.

837410 - Regulatory Compliance for Storm Drain Outfall

Originating Year:	2025	Project Type:	Stormwater	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Capital	Project Manager:	Joseph De La Cruz

Project Description/Scope/Purpose

The City of Sunnyvale occasionally constructs capital improvement projects to rehabilitate storm drain outfalls or pump station discharge piping within creeks. This work requires regulatory permitting from the State Water Resources Control Board. A condition of approval for these permits is often that the City work with a biologist to monitor and report on the reestablishment of vegetation in areas where soil was disturbed during construction for a period of five to seven years. This project provides funding each year for the annual monitoring and reporting as well as Water Board fees and for some remediation if the success criteria outlined in the permits is not being met. Funding is for Storm Pump Station No. 1, Remington Storm Drain Outfall and Storm Pump Station No. 2.

Project Evaluation and Analysis

This project provides funding for the City to complete the conditions of approval for regulatory permit compliance and closure of the permits. The project will be reviewed during the next CIP cycle to reevaluate the monitoring cycle.

Fiscal Impact

No additional ongoing operating costs anticipated.

CLEANWATER PROGRAM

THIS PAGE IS INTENTIONALLY BLANK

CLEANWATER PROGRAM

The Sunnyvale Water Pollution Control Plant is an advanced wastewater treatment facility serving residents, businesses, and industries in the City of Sunnyvale. The plant, built in 1956, now requires significant upgrades to meet environmental and regulatory requirements, as well as accommodate future growth and repair from nearly 70 years of wear and tear.

The Wastewater Utility completed a master planning effort for the Water Pollution Control Plant (WPCP) that consists of 29 projects to renovate the City's existing wastewater treatment. The Master Plan, which was approved by City Council in August 2016, serves as a long-term guide for replacing the WPCP's facilities and operations. While the Master Plan identified projects through 2040, there was greater confidence in the characterization of short-term projects than in the long-term projects. For that reason, an update to the Master Plan is currently underway.

The Sunnyvale Cleanwater Program (SCWP) is budgeted across multiple projects and includes the renovation of existing facilities, as well as construction of some new facilities to replace existing infrastructure that is too deteriorated to rehabilitate or will not meet new, higher standards. The program is planned as a series of planning, design, and construction projects over the next fifteen years in various phases, with phase five to commence in 2032 or later.

The remaining cost of the program over the twenty-year planning period is approximately \$981 million. The plant Biosolids Processing project, previously included in this category—however, not part of the Master Plan—is critical to the operations of the treatment plant and costs another \$6.3 million over the twenty-year period.

MAJOR CLEANWATER PROJECTS

Program and Construction Management Projects. These projects provide program and construction management to the SCWP. The Program Management Consultant (PMC) provides outreach, program controls, and financing support, as well as third-party expertise and coordination for master planning, condition assessment, design, permitting, commissioning, and automation. The Construction Management Consultant (CMC) provides construction management services for all projects constructed in the SCWP.

Secondary Treatment Improvements. This pair of projects is building a new conventional activated sludge facility, as well as sludge thickening and dewatering facilities. These facilities will enable the WPCP to meet future regulatory standards by biodegrading pollutants and removing ammonia from wastewater more effectively than the existing facilities. The Stage 1 project is under construction now. Once complete, it will operate in parallel with the existing secondary treatment facilities. In FY 2035/36, the Stage 2 project will expand mechanized secondary treatment, entirely replacing the pond system.

Existing Plant Rehabilitation. This project is refurbishing many of the structures and equipment that will remain in service until the Stage 2 Secondary Treatment Improvements are constructed and beyond. It is also rehabilitating and replacing the pipelines that connect the main WPCP to the oxidation ponds. Finally, it is completing the western portion of the perimeter wall that will protect the WPCP from flooding.

Primary Effluent Diurnal Equalization Facilities & Primary Effluent Emergency Storage.

This project will construct equalization tanks and emergency storage basins. These facilities are required to minimize the size and cost of the secondary treatment facilities and will allow more consistent flow to the secondary treatment process for more reliable process operations.

Cleanwater Center. The Cleanwater Center will house administration, outreach, operations, laboratory, compliance inspection, and maintenance functions. It also includes additional temporary facilities for staff who will be displaced by construction. The new Cleanwater Center will replace the functionality of the existing Administration Building, Laboratory/Control Building, Compliance Inspection Building, and Maintenance Building. The Architectural Design phase of the project started in FY 2016/17 but paused while funding was identified. Having recently restarted, design will now be completed in FY 2025/26.

824771 - SCWP Primary Process Design and Construction

Originating Year:	2005	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project provides funding for the design and construction of new primary treatment facilities at the Water Pollution Control Plant (WPCP). The scope includes funding for replacement of the current headworks, primary sedimentation tanks, influent pump station, grit removal facilities, and associated electrical, mechanical and control systems. It also includes design and construction of a perimeter wall around the eastern half of the WPCP.

Primary treatment provides the removal of solids and floating material from the wastewater stream. Ten primary sedimentation basins are reinforced concrete structures with process piping, mechanical drives and motors, and associated instrumentation. The oldest of the primary tanks were part of the original plant built in 1955. Concrete in these tanks has deteriorated, threatening the structural integrity of the basins. In addition, the primary tanks were built before the current, more stringent seismic requirements were put in place, so the current structures are vulnerable to earthquake damage.

The WPCP Strategic Infrastructure Plan (SIP) was completed in 2010, and it recommended full replacement and relocation of primary treatment, influent pumping and headworks, grit removal, and power distribution facilities, to the sludge drying paved area east of the current primary tanks. The project is divided into two packages. Package 1 consists of site demolition and grading. Construction has been completed. Package 2 was commissioned in 2024 and consists of the new headworks and primary treatment facilities and perimeter wall. The project remains open pending closeout of the second construction contract.

Project Evaluation and Analysis

Replacement is needed to restore structural integrity to the basins, to eliminate safety and public health hazards, to provide for effective treatment as required by the plant National Pollutant Discharge Elimination System (NPDES) permit, and to comply with BAAQMD engine emission standards. The perimeter wall is needed to protect the new facilities from tidal flooding and improve the security of the WPCP.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Construction is financed by the State Revolving Fund. \$4.0M in loan forgiveness from the Green Project Reserve provided revenue during the first year of construction.

Funding Sources

Wastewater Management Fund, State Revolving Fund Green Project Reserve

830240 - SCWP Program Management

Originating Year:	2013	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project is for Program Management Consultant (PMC) services related to the Water Pollution Control Plant (WPCP) reconstruction program. The PMC is responsible for quality assurance related to project design documents and will assist the City in evaluating design consultant recommendations for equipment selection and design features. The PMC provides oversight and coordination services for current operations and ongoing rehabilitation work with the master planning efforts, environmental reports, multiple design and construction contracts, construction coordination, and control systems integration and programming services. The PMC also is responsible for the Program website and outreach efforts; establishing, maintaining, and tracking project budgets and schedules; supporting procurement; administering grants and loans; and leading the permitting and compliance functions.

Project Evaluation and Analysis

The City does not have the appropriate technical expertise and resources available to manage a program of this magnitude. Since the amount and type of resource expertise required will fluctuate during the various phases of the program, and the program is only for a defined period, the City hired a consultant to deliver the Program in collaboration with their in-house resources. Staff anticipates that these services will be required for the duration of the Program.

Fiscal Impact

This project is funded by the Wastewater Management Fund. A portion of the cost is financed by a State Revolving Fund loan secured primarily for Project 824771 and a WIFIA loan secured primarily for Projects 833150, 833210, and 833240.

A portion of the PMC's contract had been budgeted under Project 834900 in FY 2021/22. To simplify invoicing and accounting, these costs have been consolidated into this project and distributed across FY 2024/25 through FY 2027/28.

831470 - SCWP Construction Management

Originating Year:	2016	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2039/40	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project is for Construction Management Consultant (CMC) services related to the Water Pollution Control Plant (WPCP) reconstruction program. The CMC is responsible for providing construction management services for all projects constructed under the Sunnyvale Cleanwater Program (SCWP). The CMC provides services such as constructability reviews, construction oversight, inspection services, quality assurance testing, construction schedule and budget management, construction coordination, meeting management, and records management.

This project is anticipated to be required through the duration of the Program. Only costs through FY 2039/40 have been included in this 20-year planning budget. The currently funded construction projects are expected to finish in FY 2039/40. If any additional projects are later identified to be necessary, there will be additional costs farther into the future.

Project Evaluation and Analysis

The City does not have the appropriate technical expertise and resources available to manage all the construction projects that will be included in the SCWP. Since the amount and type of construction management resources required will fluctuate throughout SCWP, and SCWP is only for a defined period, the City hired a consultant to provide construction management services. Staff anticipates that these services will be required through the duration of SCWP. A portion of the cost is financed by two State Revolving Fund loans secured primarily for Projects 824771 and 833210 and a WIFIA loan secured primarily for Projects 833150, 833210, and 833240.

Fiscal Impact

This project is funded by the Wastewater Management Fund. This project is anticipated to be required through the duration of the Program.

As the Program has evolved, the expected cost of construction management services has increased, due to project delays, an increased number of construction packages, inflation, and greater project complexity. This budget increase aligns projected construction management costs with these circumstances.

833080 - SCWP Waste Gas Burner Replacement

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The Water Pollution Control Plant (WPCP) gas utilization system is designed to allow for optimum use of gas produced in the anaerobic digesters and of the gas recovered from the former Sunnyvale landfill. The gases are beneficially used in the main engines (plant influent pumps) and the Power Generation Facility (PGF). Natural gas is used as a supplemental fuel when necessary.

The gas utilization system controls, meters, and distributes the gases to the intended points of use. When necessary, excess digester gas can be directed to the waste gas burners and excess landfill gas can be directed to the landfill gas flare which consists of two flares. One of the landfill gas flares is automated which lights when pressure in the system exceeds the set point to relieve excess gas pressure. The other is manually operated. The waste gas burner system has had several revisions since it was first installed in 1952 including the installation of a newer flare in 1989.

This project will include design and construction of upgrades necessary to support air permitting requirements and higher loads concurrent with Projects 833350 - SCWP Digester No. 5 and 833360 - FOG/Food Waste Facility.

Project Evaluation and Analysis

The Waste Gas Burner prevents unburned gas from being released into the atmosphere and is essential to the operation of the gas utilization system. The WPCP has a stringent Permit to Operate issued by the Bay Area Air Quality Management District (BAAQMD) which includes the operation of the Waste Gas Burner. The current system is now beyond its useful life due to corrosion.

Costs are currently estimated parametrically, based on replacement in-place. The Master Plan Update Project 834400 generated a Combined Heat and Power Plan which recommended that the project also include new hydrogen sulfide removal and blowers. An updated cost estimate is not yet available but will likely exceed the current budget.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could increase project costs. Escalation assumptions will be updated at that time as well.

833100 - Sunnyvale Cleanwater Program Capital Replacement

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2038/39	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The Sunnyvale Cleanwater Program (SCWP) Master Plan was adopted by City Council in August 2016. This Master Plan defines the capital projects that will be necessary to replace the Water Pollution Control Plant (WPCP) in place while continuously meeting evolving regulatory requirements. Permitting, condition assessment, engineering, and construction of these projects is included under 21 capital projects. These capital projects include new construction and rehabilitation that is driven by triggers which can be identified several years in advance. This project is distinct and encompasses urgent and unplanned rehabilitation work. This type of work is usually triggered by a critical failure such as a cogeneration engine breakdown, massive structural crack, broken pump or gate, or catastrophic corrosion. This work is also distinct from unplanned maintenance work funded through Operations, in that Capital Replacement efforts are comparable in size and complexity to typical capital projects, and usually require plans and specifications prepared by a professional engineer.

This project is anticipated to extend through the duration of Sunnyvale Cleanwater Program (SCWP).

Project Evaluation and Analysis

Although the timing and scope of this emergency rehabilitation work cannot be defined in advance, such events are unavoidable at a treatment plant with a heavy investment in conveyance and complex mechanical equipment. That category of work was approved with the adopted Master Plan and is included under this project. Interim replacement of the pond effluent pipeline was funded from this project and provides a recent example of an unplanned failure.

Fiscal Impact

This project is funded by the Wastewater Management Fund.

When SCWP budgets are comprehensively revised following Master Plan Update adoption, this budget will be adjusted proportionately

833120 - SCWP Environmental Mitigation

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2039/40	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The Sunnyvale Cleanwater Program (SCWP) Master Plan defined the capital projects that will be necessary to replace the Water Pollution Control Plant (WPCP) in place while continuously meeting evolving regulatory requirements. Permitting, condition assessment, engineering, and construction of these improvements is included under 21 capital projects. Environmental mitigation is not included within individual capital projects. Both mitigation and permitting involve actions required by environmental regulations, but are distinct in that mitigation includes the analysis, design, and installation of physical changes; whereas permitting includes the preparation of applications and payment of associated fees.

The Program Environmental Impact Report identifies several possible impacts to protected species and habitat. Required habitat mitigation could include activities such as establishment of new Congdon's tarplant populations, purchase of banked credits, construction of new wetlands, special management of onsite habitat, and contribution to regional habitat restoration efforts. Additionally, the WPCP and neighboring closed landfills are subject to several operating permits. To the extent that SCWP projects impact activities performed to stay in compliance with these permits, improvements executed to offset these impacts could be performed under this project. For example, construction of SCWP facilities conflicts with existing groundwater monitoring wells. These wells were relocated, to stay in compliance with the landfill's Corrective Action Plan. As another example, construction delays on the Primary Project required several extensions of a negotiated compliance and enforcement agreement. In this case, mitigation was achieved by paying increasing fees to the Bay Area Air Quality Management District (BAAQMD).

Project Evaluation and Analysis

If environmental mitigation was not captured in a separate project, equivalent funding would need to be included in the associated construction projects. In some cases, this may require that a project be left open for several years after construction is complete.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Project costs were estimated to be 1.5% of total Program construction costs when this project was created. Some costs--such as purchasing mitigation credits to compensate for impacts from work in the ponds and channels north of the WPCP--can be predicted. Other costs may be driven by contingency responses to environmental monitoring or unknown conditions and are difficult to predict.

When SCWP budgets are comprehensively revised following Master Plan Update adoption, this budget will be adjusted proportionately.

833150 - SCWP Existing Plant Rehabilitation - Split Flow

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Michael Frederick

Project Description/Scope/Purpose

After raw sewage undergoes primary treatment, the primary effluent undergoes secondary and tertiary treatment. Secondary treatment is the biological step which removes organic matter while tertiary treatment includes filtering, disinfecting, and dechlorinating the wastewater, making it clean for discharge. This project entails rehabilitating the existing secondary treatment facilities (Oxidation Pond Facilities, Fixed Growth Reactors, Air Flotation Tanks) and tertiary treatment facilities (Chlorine Contact Tanks, Dual Media Filter Beds) in addition to a tank drainage structure and select yard piping at the Water Pollution Control Plant (WPCP). This project also includes completion of the western half of the WPCP perimeter wall. The eastern half of the perimeter wall was completed as part of Project 824771—Primary Process Design and Construction. This project also includes sliplining a portion of the existing 60" and 66" primary effluent pipeline and replacing a different portion of it. Furthermore, this includes permitting and modifying the new pond effluent pipeline and pond return pipeline for long-term use.

Existing Plant Rehabilitation - Split Flow is Project 2.1 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016 and belongs to Phase 2 of the Program. The project is divided into three bid packages. Package 1 is the electrical and mechanical rehabilitation work. The project began with a condition assessment in FY 2016/17. The Engineering Design phase of the project started in FY 2018/19 and ended in FY 2022/23, while the Construction phase of the project started in FY 2022/23 and ends in FY 2026/27. Package 2 is the construction of the western WPCP perimeter wall. The Engineering Design phase of the project started in FY 2019/20 and will end in FY 2026/27 after a temporary pause, while the Construction phase of the project starts in FY 2026/27 and ends in FY 2027/28. Package 3 is the Pipeline project. Package 3 was created when it was identified that pipeline rehabilitation work required significant regulatory permitting which would stretch the design period. The Engineering Design phase of the project started in FY 2020/21 and ends in FY 2025/26, while the Construction phase of the project starts in FY 2026/27 and ends in FY 2027/28.

Project Evaluation and Analysis

Due to the age of overall facilities at the Water Pollution Control Plant (WPCP), key elements of the existing treatment process need to be rehabilitated or replaced to maintain permit compliance. These include elements of the existing secondary and tertiary treatment process. Elements of the secondary and tertiary treatment processes need to be rehabilitated to keep them operational until they are fully replaced with conventional activated sludge facilities and ultraviolet disinfection facilities.

A condition assessment evaluation was included as the first stage of the rehabilitation project to determine which facilities need to be rehabilitated. The scope of this condition assessment also included evaluation of the influent pipelines to the WPCP (Project 1.3 of the Sunnyvale Cleanwater Program Master Plan, titled Rehabilitation Influent Pipelines to WPCP).

Fiscal Impact

This project is funded by the Wastewater Management Fund and a portion is financed by the Water Infrastructure Finance and Innovation Act (WIFIA) program loan. It was also selected for a State Revolving Fund (SRF) loan which will be executed in FY2025/26. A cost share agreement with Valley Water is underway and could potentially fund a portion of the cost for the perimeter wall.

833210 - Secondary Treatment & Thickening/Dewatering - CAS Stage 1

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Michael Frederick

Project Description/Scope/Purpose

This project will build a new conventional activated sludge (CAS) process—a biological process, which removes nutrients such as nitrogen from the water. After this project is complete, primary effluent will be split between the existing secondary treatment process and the CAS system .

The project is divided into two packages. Package 1 consists of site preparation including grading, paving, and utility reroutes. A temporary maintenance building and an office trailer will be furnished and installed for City use. Package 1 also includes demolition of the existing Primary Control Building, Maintenance Facility, and Primary Sedimentation Basins.

Package 2 consists of a primary effluent distribution structure; two bioreactors; a blower building and aeration blowers; four secondary clarifiers; a return activated sludge (RAS) pump station; a waste activated sludge (WAS) pump station; a standby generator; a thickening and dewatering facility; a digested sludge storage tank; a sidestream treatment facility; and a thickened sludge blend tank. This project also includes rehabilitating selected components of the existing digester supernatant pump station.

The Construction phase of Package 1 started in FY 2021/22 and ends in FY 2022/23. The Construction phase of Package 2 started in FY 2022/23 and will end in FY 2027/2028. This project also funds temporary facility costs for staff displaced by demolition of existing facilities. Those costs will extend into FY2029/30, until the new Cleanwater Center is ready for occupancy.

Project Evaluation and Analysis

The existing secondary treatment system is becoming increasingly unreliable, cannot meet future total inorganic nitrogen (TIN) load limits, and is no longer able to produce high-quality recycled water. Operating the existing secondary treatment system in parallel with the Stage 1 CAS system is expected to address these issues, and construction of the full CAS system can be delayed until necessary. This approach spreads capital costs over a longer timeframe and reduces overall O&M (Operation & Maintenance) costs.

Fiscal Impact

This project is funded by the Wastewater Management Fund and financed by a State Revolving Fund loan. The \$16M in cost attributable to food waste codigestion infrastructure will be funded through an interfund transfer from the Solid Waste Management Fund, rather than directly funding the project.

Operating costs will increase as the power demand will increase significantly and chemical polymer usage will double.

833240 - Cleanwater Center

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Stephen Ping

Project Description/Scope/Purpose

This project entails constructing a new Cleanwater Center that will house administration, outreach, operations, laboratory, compliance inspection, and maintenance functions. The Cleanwater Center is triggered by two drivers: (1) a site conflict between the temporary maintenance building erected under Project 833210 and the planned footprint of aeration basins constructed under Project 833420, and (2) the substandard condition of existing facilities.

As currently planned, the new Cleanwater Center will replace the functionality of the existing Administration Building, Laboratory/Control Building, Compliance Inspection Building, and Maintenance Building. The scope also includes the south segment of the WPCP perimeter wall, landscaping and design and construction of the Recycle Yard parking lot, and design and construction of the Recycle Yard parking lot and site civil improvements along what was formerly Carl Road. This project also includes community and environmental enhancements previously defined as separate project 833270. These enhancements may include:

- Educational features in the Public Outreach Meeting Space of the new Cleanwater Center;
- Public parking, sidewalks, signage, and road markings to facilitate plant tours;
- Americans with Disabilities Act (ADA) related improvements for public tours;
- Kiosks at the entrance of the oxidation ponds.

The Architectural Design phase of the project started in FY 2016/17. It was placed on hold due to budget constraints, then restarted in FY 2024-25. Construction is anticipated to begin in FY 2026/27.

Project Evaluation and Analysis

The 2016 SCWP Master Plan included a support building programming evaluation of space use and needs for the following functional areas: (1) administration, (2) operations and control, (3) maintenance, (4) laboratory, (5) compliance inspection. The resulting project concept consisted of a new maintenance building within the WPCP fence line and a combination administration-laboratory building on Recycle Yard, across Carl Road. Significant regulatory hurdles and expensive modifications to the building foundation to address newly-anticipated permitting requirements prompted a reconsideration of the project definition. The reconceptualized project is a combination administration-laboratory-maintenance building—dubbed the Cleanwater Center—inside the WPCP fence line, overlapping the existing administration building site.

Fiscal Impact

This project is funded by the Wastewater Management Fund and financed by the Water Infrastructure Finance and Innovation Act (WIFIA) program loan.

833260 - SCWP Recycle Water Improvements (New Recycled Water PS)

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The project entails rehabilitating selected components of the existing recycled water pump station. Due to the age of the recycled water pump station facilities, the facilities need to be rehabilitated or replaced to support reliable operation.

These improvements will be implemented when a majority of the recycled water pump station facilities near the end of their useful life.

Recycle Water Improvements (New Recycled Water PS) is Project 9.1 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016.

Project Evaluation and Analysis

Costs for this project were estimated based on an assumption that the major support utility systems that would need to be replaced or rehabilitated include:

- six recycled water pumps
- miscellaneous mechanical equipment and piping
- incidental electrical work

Based on a useful life of 20 years, all six pumps will be due for replacement.

Fiscal Impact

This project is funded by the Wastewater Management Fund. The Master Plan Update could identify changes in scope, cost, timing, packaging, or need for this project. Escalation assumptions will be updated at that time as well.

833270 - SCWP Community Improvements

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails community and environmental enhancements. These enhancements may include visitor experience amenities such as:

- Educational features in the Public Outreach Meeting Space of the new Cleanwater Center;
- Public parking, sidewalks, signage, and road markings to facilitate plant tours;
- Americans with Disabilities Act (ADA) related improvements for public tours;
- Kiosks at the entrance of the oxidation ponds;

Community Improvements is Project 9.2 of the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016.

Project Evaluation and Analysis

As identified in the 2016 Master Plan, a certain percentage of capital improvement project expenditures will be dedicated to community enhancements.

Many of the community improvements envisioned for this project support WPCP tours for the public, which have been suspended during heavy construction. The budget for these improvements has been pushed to coincide with the completion of Projects 833210 and 833150, when it will be safer for the public to tour the Plant.

Fiscal Impact

This project is funded by the Wastewater Management Fund.

833280 - SCWP Miscellaneous Civil Site/Support Utility Improvements

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

Because a treatment plant the size of the Water Pollution Control Plant (WPCP) has many components which need to be improved, this project packages these various improvements into one larger WPCP repair and rehabilitation project.

This project entails rehabilitating selected components of the existing support utility systems. The major support utility systems include:

- Potable water, utility water, hot water, utility air;
- Digester gas, landfill gas, natural gas;
- Tank drains, sanitary drains, storm drains;
- Recycled water.

Miscellaneous Civil Site/Support Utility Improvements is Project 9.4 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016. The Engineering Design phase of the project starts in FY 2026/27 and ends in FY 2027/28, while the Construction phase of the project occurs in FY 2028/29.

Project Evaluation and Analysis

Due to the age of the overall facilities as well as proposed process upgrades at the WPCP, key elements of the support utilities need to be rehabilitated or replaced to maintain reliable operation.

A condition assessment of the existing facilities will be performed as part of Project 834390 - WPCP Condition Assessment. Once the condition assessment is completed, the project budget will be reevaluated. It may also be determined that some or all rehabilitation is best completed as an element of larger capital upgrades.

Fiscal Impact

This project is funded by the Wastewater Management Fund. The scope of this project was estimated without information about the condition of WPCP's support utility systems. Results of the ongoing condition assessment (Project 834390) may show the need for more extensive and costly rehabilitation.

833330 - SCWP Filter Control Building

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

Filtration is part of tertiary treatment, which makes secondary effluent clean enough for discharge. The new Filter Control Building will be updated with electrical equipment, instrumentation, and controls.

This project entails replacing the existing facility with a new Filter Control Building. The major project elements include demolition of the existing Filter Control/Lab Building and equipment, installation of temporary supervisory control and data acquisition controls (SCADA), a new filter control building, new electrical equipment (including motor control centers), new instrumentation and controls, and the extension/connection into the upgraded Water Pollution Control Plant (WPCP) SCADA system.

Filter Control Building (Includes Demolition of Existing) is Project 3.1 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016. The engineering design phase of the project starts in FY 2027/28 and ends in FY 2028/29, while the construction phase of the project starts in FY 2028/29 and ends in FY 2029/30.

Project Evaluation and Analysis

The existing Filter Control Building is currently co-located with the main laboratory. This project replaces the filter control facilities with modern electrical and automation control equipment in a new Filter Control Building. Implementation of this project, and coordination with future facilities—the laboratory and Ammonia Storage Facility—will be evaluated during the Master Plan Update.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could change project costs, scope, and/or timing. Escalation assumptions will be updated at that time as well.

833340 - SCWP Chloramine Disinfection

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails converting the existing chlorine disinfection system to a chloramine disinfection system. Disinfection is a required step in the tertiary treatment process, which produces water clean enough for non-potable reuse or discharge to the Bay. Both chlorine and ammonia will be added to the existing chlorine contact tanks (CCTs) to form chloramines that will provide disinfection within the CCTs. A sodium hypochlorite system (which was implemented as a part of the Simultaneous Production of Recycled Water/Sodium Hypochlorite Conversion Project) will be used to dose chlorine to the CCTs. A new aqueous ammonia storage and feed facility will be implemented to dose ammonia to the CCTs.

The major project elements include the following: (1) pilot testing chloramine disinfection; (2) an aqueous ammonia storage and feed system; (3) ammonia piping from the aqueous ammonia storage and feed system to the existing CCTs; (4) ammonia induction system located at the CCTs; and (5) modifications to the sodium hypochlorite induction system located at the CCTs.

Chloramine Disinfection is Project 3.4 in the Sunnyvale Cleanwater Program (SCWP) Master Plan adopted by City Council in 2016. The Engineering Design phase of the project starts in FY 2031/32 and ends in FY 2032/33, while the Construction phase of the project starts in FY 2032/33 and ends in FY 2034/35.

Project Evaluation and Analysis

When a full new secondary treatment process becomes operational after completion of Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2, trihalomethane formation may increase. The Water Pollution Control Plant (WPCP) may need to comply with trihalomethane limits, and the effluent concentration may exceed the regulated limits. The existing chlorine disinfection process will need to be converted to an alternate disinfection process. Chloramine disinfection can be implemented to reduce trihalomethane formation. The pilot testing conducted as the first stage of this project will determine how chloramine disinfection is implemented during this project.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

833350 - SCWP Digester No. 5

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails constructing a new anaerobic digester, Digester No. 5. Digesters are part of the solids treatment process in the Water Pollution Control Plant (WPCP). The sludge produced by the primary and secondary treatment processes in the WPCP is anaerobically treated by digesters to make the sludge safe for disposal in landfills after it is thickened and dewatered.

The major project elements include the following: (1) one anaerobic digester equivalent in size to Digester No. 4 (about one megagallon); (2) approximately 50 linear feet of utilidor to connect the digester to the utilidor system; (3) digester mixing system with a digester mixing pump; (4) digester heating system with a heat exchanger, digester sludge circulating pump, digester hot water circulating pump, and a raw sludge hot water pump; (5) digester sludge pumping system with a digester supernatant pump; and (6) influent sludge grinder.

Digester No. 5 is Project 4.4 in the Sunnyvale Cleanwater Program SCWP) Master Plan adopted by City Council in 2016. The Engineering Design phase of the project starts in FY 2025/26 and ends in FY 2026/27, while the Construction phase of the project starts in FY 2027/28 and ends in FY 2029/30.

Project Evaluation and Analysis

Based on projections for solids loadings and additional Food Waste loadings, it is expected that more digester volume will be needed (equivalent to the volume of existing Digester No. 4). The sizing, timing, and design concept is being further evaluated during Project 834400 - Master Plan Update. An engineering design firm will be procured as soon as this evaluation is complete.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Once the new digester is operational, operating costs will increase because power demand will increase. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

833360 - SCWP Food/FOG Waste Facility

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

As originally envisioned in the Master Plan, this project entails implementing a facility that would store and feed fats/oils/grease (FOG) and food waste to the digesters. FOGs are a problematic component of domestic wastewater. To avoid FOG buildup in pipelines and the treatment processes, grease loads could be trucked directly to the Water Pollution Control Plant (WPCP) for treatment. Decomposition of food waste in landfills generates greenhouse gases such as methane. When this project was initiated, it was assumed that digesting FOG and food waste would be economically beneficial only if excess digester capacity is used. It was planned that a FOG and food waste market analysis would be completed at the onset of this project. The estimated cost assumes the following major project elements: (1) FOG and food waste receiving program development; (2) 3,000 gallon per day FOG storage and feed facility with associated storage tank, grinder pumps, and feed pumps; and (3) 3,000 gallon per day emulsified food waste storage and feed facility with associated storage tank, grinder pumps, and feed pumps.

Although the Master Plan contemplated digesting both FOG and food waste, it is now expected that the facility will be receiving mostly food waste since FOG is no longer as readily available.

Project Evaluation and Analysis

Three studies have been completed that will inform the scope of this project:

- 1) A food waste co-digestion pilot study, using food scraps from local sources that are delivered to the SMaRT (Sunnyvale Materials Recovery and Transfer) Station
- 2) A preliminary assessment of the Bay Area Air Quality Management District requirements for permitting co-digestion
- 3) An evaluation of the impact of food waste co-digestion on the other treatment processes at the WPCP

Provisions for accommodating food waste co-digestion have been incorporated into Project 833210 - Secondary Treatment & Thickening/Dewatering - CAS Stage 1. Project 834400 - Master Plan Update includes an analysis to finalize the scope of this project.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

833370 - SCWP Cogeneration Upgrade

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

Cogeneration is a process which uses an internal combustion engine to produce heat and electrical power from the biogas emitted during the treatment process. This power would be used rather than purchasing the same power from Silicon Valley Clean Energy (SVCE). This project entails replacing existing facilities while always maintaining the operation of at least one cogeneration unit.

The major project elements include the following: (1) decommissioning the existing generators and replacing them with two new engine generators; (2) hydrogen sulfide and siloxane removal; (3) a backup boiler; (4) new exhaust heat recovery facilities; (5) upgrades to electrical, piping, and SCADA equipment; and (6) civil and site work. This project is currently in preliminary design and may also include gas storage to stabilize flow to the engines and maintain system pressure, ammonia removal for food waste addition, and structural modifications to the existing PGF building.

Project Evaluation and Analysis

The existing cogeneration facilities will need to be replaced in-kind to take advantage of recent technologies and comply with air regulations. New engine technology is more efficient and requires less maintenance.

A comprehensive Combined Heat and Power Plan was generated during Project 834400 - Master Plan Update. This evaluation assessed gas availability, compared onsite cogeneration to other alternatives, identified gas storage needs, updated the cogeneration design criteria, quantified hot water needs, compared gas treatment technologies, and identified Best Available Control Technology requirements for air permitting. Based on the results of this evaluation, the consultant validated the core project scope and recommended adding gas storage. An updated cost estimate is not yet available.

Because the Master Plan Update evaluation is so closely related to the Cogeneration Upgrade design, and the condition of the existing cogeneration engines makes this upgrade urgent, a single consultant is delivering both projects. This consultant will also conduct a structural and seismic analysis of the existing power generation building, relative to the requirements of the recommended project alternative. If structural modifications or seismic retrofits are required, additional budget would be needed.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Increasing cogeneration capacity will enable an increase in onsite power production, reducing the amount of power that must otherwise be purchased from SVCE. When the predesign cost estimate is available, it may be higher or lower than the previous estimate.

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project, along with Project 833210 - SCWP Split Flow Conventional Activated Sludge System - Stage 1, entails implementing Conventional Activated Sludge (CAS) secondary treatment facilities in two stages. During Stage 1, the new facilities will be run in parallel with the existing secondary treatment system. During Stage 2, CAS facilities will fully replace the existing secondary treatment system.

The major project elements for Stage 2 include adding more unit processes such as aeration basins and blowers, secondary clarifiers, return activated sludge/waste activated sludge pump station. The project also requires the demolition of existing air flotation tanks and pump station.

Secondary Treatment Improvements - Split Flow CAS Stage 2 is Project 2.3 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016. The Engineering Design phase of the project starts in FY 2030/31 and ends in FY 2031/32, while the Construction phase of the project starts in FY 2032/33 and ends in FY 2034/35.

Project Evaluation and Analysis

The existing secondary treatment system is becoming increasingly unreliable, cannot meet future total inorganic nitrogen (TIN) load limits, and is no longer able to produce high-quality recycled water. Operating the existing secondary treatment system in parallel with the Stage 1 CAS system is expected to address these issues, and construction of the full CAS system can be delayed until necessary. This approach spreads capital costs over a longer timeframe and reduces overall O&M (Operation & Maintenance) costs.

Changes in predicted regulations and planned developments could have significant impacts on the timing and scope of future secondary treatment upgrades. Project 834400 - Master Plan Update is evaluating these possible changes.

A site conflict between elements of this project and the existing secondary treatment facilities will be resolved in Project 834400 Master Plan Update.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Recommendations developed during the Master Plan Update could increase or decrease project costs. Following construction, it is expected that operating costs will increase because power demand will increase significantly. The increase may be partially offset by increased power production due to larger sludge volumes increasing the biogas available for onsite power generation.

833430 - SCWP Primary Effluent Diurnal EQ and Emergency Storage

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails constructing equalization tanks and emergency storage basins at the current site of Oxidation Pond #1. The major project elements can be broken down into two parts: (1) Primary Effluent Diurnal Equalization (EQ) Facilities and (2) Primary Effluent Emergency Storage.

The Primary Effluent Diurnal EQ Facilities component of the project includes the following: (1) removal of sludge/sediment along southern section of Pond #1; (2) access road improvements (raise road above projected sea level rise elevation) from the central plant site to the EQ tanks; (3) earthwork to raise berms and site area to accommodate sea level rise; (4) plant water supply pipeline for washdown uses; (5) three approximately 2.7 MG (Million Gallon) circular concrete EQ tanks; (6) EQ pump station to return flows from the diurnal EQ and emergency EQ basins to the secondary treatment process; and (7) extension of primary effluent pipeline from existing primary effluent pipeline (that discharges to the recirculation channel) to the EQ tanks. Access road and levee conditions will be assessed prior to beginning this project,

The purpose of this project is to replace the aging infrastructure of the existing Oxidation Pond #1 with tanks and basins that provide a more reliable storage solution. Without storage, a wastewater treatment plant must be large enough to treat the wastewater as fast as it enters from the sewer. With the added storage the proposed tanks and basins provide, a plant able to equalize its flow can perform just as effectively with smaller facilities.

Project Evaluation and Analysis

These facilities will be needed when the new secondary treatment facilities are fully implemented and the oxidation ponds are decommissioned, with the completion of Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2.

The diurnal EQ and emergency storage facilities will store partially-treated wastewater in the morning/early evening, during storm peaks, during emergencies such as major power outages or major process upsets, and during major plant maintenance. During Project 834400 – Master Plan Update, the consultant is validating the location, size, and type of storage facilities recommended in the 2016 Master Plan. A revised alternative with a higher or lower cost may be recommended.

Fiscal Impact

This project is funded by the Wastewater Management Fund. This project is being re-evaluated during the Master Plan Update. This project's timing depends on the timing of Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2.

Funding Sources

Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

833440 - SCWP Filter Backwash Storage

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2038/39	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails implementing filter backwash storage facilities, which include a storage tank and pump station. These storage facilities would provide cleaning water for the filters, which are part of the tertiary treatment process that produces effluent clean enough for Bay discharge.

The tank would store backwash flows from the dual media filters (DMFs). The pump station would pump the backwash flows from the storage tank to the influent channel of the future primary sedimentation tanks. The tank would provide enough storage capacity so backwash flows may be pumped to the primary sedimentation tanks when influent flow is low (e.g., at off-peak times).

The major project elements include the following: (1) 0.94 MG filter backwash storage tank equipped with internal baffle walls, overflow weirs, and mixers; (2) filter backwash pump station with a wet well, three 20-hp submersible pumps, and flow metering; (3) 48" pipeline from existing DMFs to the filter backwash storage tank; (4) 15" pipeline from filter backwash storage tank to the PST (Primary Sedimentation Tanks) influent channel; and (5) concrete masonry unit room for the pump and mixer motor control centers and variable frequency drives.

Filter Backwash Storage is Project 3.2 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016. The Engineering Design phase of this project starts in FY 2035/36 and ends in FY 2037/38, while the Construction phase of this project starts in FY 2037/38 and ends in FY 2038/39.

Project Evaluation and Analysis

Filter backwash flows from the existing DMFs currently flow to the existing oxidation ponds. As a result, new filter backwash storage facilities located on the central plant site will be needed when the oxidation ponds are decommissioned under Project 2.3 of the Sunnyvale Cleanwater Program (SCWP) Master Plan, i.e. Project 833420 SCWP Split Flow Conventionally Activated Sludge - Stage 2. The scope of this project is currently being reevaluated as part of the Master Plan Update.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

Funding Sources

Wastewater Management Fund

833450 - SCWP Thickening and Dewatering Facility - Stage 2

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

Wastewater treatment separates the liquid component of raw sewage from the solid component, i.e. sludge. To dispose of this sludge, it must first be thickened, digested, and dewatered. This allows the sludge to then be taken offsite in truck trailers to landfills.

This project, along with Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2, entails implementing a process to thicken secondary sludge (produced by the new secondary treatment facilities completed under Project 2.3 of the Sunnyvale Cleanwater Program Master Plan titled Secondary Treatment Improvements - Split Flow Stage 2) and dewater digested biosolids produced by the anaerobic digestion process. The facility will be implemented in two Stages.

The major project elements of Stage 2 include the following: (1) one thickening unit (i.e., rotary drum thickener) and associated Thickened Waste Activated Sludge pump, polymer system, and support utilities; and (2) one dewatering unit (i.e., screw press) and associated cake pump, polymer system, and support utilities.

Thickening and Dewatering Facility - Stage 2 is Project 4.3 in the Sunnyvale Cleanwater Program (SCWP) Master Plan adopted by City Council in 2016. The Engineering Design phase of this project starts in FY 2032/33 and ends in FY 2033/34, while the Construction phase of this project starts in FY 2033/34 and ends in FY 2034/35.

Project Evaluation and Analysis

The first stage of thickening and dewatering facilities are being implemented in Project 833210 - SCWP Split Flow Conventional Activated Sludge System - Stage 1. A second stage of thickening and dewatering facilities will be needed for solids treatment when the second stage of new secondary treatment facilities is implemented.

Due to the proposed process upgrades at the WPCP, key elements of solids treatment facilities (digesters and digester support facilities) need to be upgraded to support reliable operation and permit compliance.

The scope and timing of this project are currently being reevaluated as part of the Master Plan Update.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

833460 - SCWP Demolition Fixed Growth Reactor (FGR) Pump Station

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2037/38	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

At the Water Pollution Control Plant (WPCP), secondary treatment is carried out by oxidation ponds, fixed growth reactors, and air flotation tanks. After Project 833210-SCWP Split Flow Conventional Activated Sludge System- Stage 1, the new conventional activated sludge (CAS) facility will provide most secondary treatment. Once Project 833420- SCWP Split Flow Conventionally Activated Sludge - Stage 2 is constructed at the WPCP, the treatment ponds and Fixed Growth Reactors will no longer be needed.

Demolition Fixed Growth Reactor Pump Station is Project 10.1 in the Sunnyvale Cleanwater Program (SCWP) Master Plan adopted by City Council in 2016. The engineering design phase of this project starts in FY 2035/36 and ends in FY 2036/37, while the construction phase of this project starts in FY 2036/37 and ends in FY 2037/38.

Project Evaluation and Analysis

Demolition of the air flotation tanks is included with Project 833420.

Fiscal Impact

This project is funded by the Wastewater Management Fund. The scope and timing is being re-evaluated during the Master Plan Update.

Funding Sources

Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

Plans and Goals

833510 - SCWP UV Disinfection

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2038/39	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project entails replacing the existing chlorine disinfection system with an ultra-violet (UV) disinfection system. Disinfection is a required step in the tertiary treatment process which produces water clean enough to discharge from the treatment plant.

The major project elements include the following: (1) Pilot testing UV disinfection equipment; (2) Open-channel UV disinfection system made up of low-pressure, high-output UV lamps installed in concrete channels; (3) Flow split structure to distribute flow to the UV channels; (4) Weir structure to regulate water surface elevation through the UV channels; (5) Flow metering for UV dose control; and (6) Canopy to cover the UV disinfection facility.

UV Disinfection is Project 3.5 in the Sunnyvale Cleanwater Program Master Plan adopted by City Council in 2016. The Engineering Design phase of this project starts in FY 2035/36 and ends in FY 2036/37, while the Construction phase of this project begins in FY 2037/38.

Project Evaluation and Analysis

After completion of Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2, trihalomethane formation may increase. An increase in trihalomethane formation may introduce trihalomethane limits in the permit cycle after the new secondary treatment process is operational. To meet these trihalomethane limits, the existing disinfection process may need to be converted to an alternate disinfection process, such as chloramine or UV disinfection.

If chloramine disinfection is implemented, N-Nitrosodimethylamine (NDMA) formation may increase. NDMA is not currently regulated, but an increase in NDMA formation may introduce effluent NDMA limits in the permit cycle after ammonia addition is implemented. Should NDMA become a regulatory driver, chloramine disinfection would need to be stopped and UV disinfection would need to be implemented after pilot testing the UV disinfection equipment.

Disinfection is being re-evaluated during the Master Plan Update. The updated recommendation may cost more or less than the previous recommendation.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Once the new UV facility is operational, power demand will increase, increasing operating costs. This will be partially offset by decreased chemical costs, as the need for sodium hypochlorite will be reduced and there will be no need for sodium bisulfite.

Funding Sources

Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

Plans and Goals

833520 - SCWP Demolition Fixed Growth Reactors (FGRs)

Originating Year:	2018	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2037/38	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

At the Water Pollution Control Plant (WPCP), effluent from the treatment ponds is pumped to Fixed Growth Reactors, where microorganisms convert ammonia to nitrate. Once Project 833420 - SCWP Split Flow Conventionally Activated Sludge - Stage 2 is constructed at the WPCP, the treatment ponds and Fixed Growth Reactors will no longer be needed. To make room for UV disinfection facilities that will likely be needed in the future, the Fixed Growth Reactors must be demolished.

Demolition Fixed Growth Reactors (FGRs) is Project 10.2 in the Sunnyvale Cleanwater Program (SCWP) Master Plan adopted by City Council in 2016. The Engineering Design phase of this project starts in FY 2035/36 and ends in FY 2036/37, while the Construction phase of this project starts in FY 2036/37 and ends in FY 2037/38.

Project Evaluation and Analysis

Future regulations that drive disinfection facility upgrades are uncertain. It is currently expected that the Chloramine Disinfection project will be initiated in FY 2031/32. At that time, trihalomethane and NDMA limits will have been established. If chloramine disinfection is insufficient to meet these limits, the UV Disinfection project could be constructed sooner, making the Chloramine Disinfection project unnecessary. In this case, the fixed growth reactors would need to be demolished sooner, to clear space for the UV facility.

Demolition of the air flotation tanks is included as part of Project 833210 - SCWP Split Flow Conventional Activated Sludge System - Stage 1. Demolition of the fixed growth reactor pump station is included as Project 833460 - SCWP Demolition Fixed Growth Reactor (FGR) Pump Station.

Fiscal Impact

This project is funded by the Wastewater Management Fund. The scope and timing of Project 833420 - SCWP Split Flow Conventional Activated Sludge - Stage 2 will be re-evaluated during the Master Plan Update. Changes in Project 833420 may impact the scope and timing of this project as well. The Master Plan Update may also identify a different sequence of site usage, which could also change the timing of this project.

Funding Sources

Wastewater Management Fund. Changes identified during the Master Plan Update could increase or decrease project costs. Escalation assumptions will be updated at that time as well.

834390 - SCWP WPCP Condition Assessment

Originating Year:	2019	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Michael Frederick

Project Description/Scope/Purpose

This project is in Phase 3 of the Sunnyvale Cleanwater Program (SCWP). The original WPCP Condition Assessment was completed in 2006. The results of this assessment informed the scope of condition-driven projects in the SCWP. In 2019, an updated condition assessment was conducted on the secondary and tertiary treatment facilities, and the influent sewer pipelines. This project complements that assessment with an inspection of facilities not included in the 2019 assessment.

This assessment focuses on Plant-wide support utility systems (potable water, utility water, hot water, utility air, digester gas, landfill gas, natural gas, tank drains, sanitary drains, storm drains, and recycled water). Structural assets in the existing cogeneration building are being assessed as part of 833370 - SCWP Cogeneration Upgrade.

Project Evaluation and Analysis

833280 - SCWP Miscellaneous Civil Site/Support Utility Improvements is scoped and budgeted based on a planning-level estimate. This project will identify specific pipelines that need replacement, and generate a more accurate cost estimate for that work. It may also recommend that some rehabilitation be packaged with larger capital upgrades.

Fiscal Impact

This project is funded by the Wastewater Management Fund.

Funding Sources

Wastewater Management Fund

834400 - SCWP Master Plan Update

Originating Year:	2019	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The original SCWP Master Plan was completed in 2016. While a Master Plan identifies projects over a 20-to-30-year span, there is greater confidence in the characterization of the short-term projects than in the longer-term projects. For that reason, it is typical for a Master Plan to be re-assessed and updated approximately every five to ten years.

The Master Planning Consultant is responsible for leading strategic assessments; updating flows and loads projections; re-evaluating timing and relevance of project drivers; identifying recent technology alternatives; recommending changes in the selected alternatives; updating project cost estimates; and revising the ultimate WPCP layout.

The updated SCWP Master Plan will supply a roadmap for Phases 3, 4, and 5 of the SCWP that reflects the most up-to-date information about City policy, State and Federal regulations, operating conditions, state-of-technology, market conditions, and design decisions made during Phases 1 and 2 of the SCWP.

Project Evaluation and Analysis

This project began after design of four large SCWP projects (Headworks and Primary Treatment, Existing Plant Rehabilitation–Split Flow, Secondary Treatment Improvements–Split Flow CAS Stage 1, and Administration and Lab Building) was complete or nearing completion. Changes made during these projects will significantly alter site use, power consumption, and operations at the WPCP.

In the original SCWP Master Plan, the scope and need for nine of the projects in Phases 4 and 5 were uncertain. These indeterminate projects have not been included in the current adopted budgets. However, they will be included in technical and strategic evaluations during the SCWP Master Plan Update. After the SCWP Master Plan Update, the City may reconsider whether to fiscally plan for a more conservative scenario. The Master Plan Update will also recommend capacity upgrades to support increased growth projections. It is likely that increasing WPCP capacity will increase the cost of several projects in the SCWP.

Fiscal Impact

This project is funded by the Wastewater Management Fund. Recommendations from the Master Plan Update could affect the cost of SCWP Phases 3-5 in several ways: changing the scope or timing of future projects, pinpointing triggers for projects defined by the original Master Plan as potentially needed but not currently funded, identifying new projects not covered under the original Master Plan, and eliminating or deferring projects that are no longer crucial.

834900 - SCWP Financing Support

Originating Year:	2020	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project is to capture the costs for managing the complex financing related to the SCWP. The budget includes
 -- Ross Financing's contract to serve as the City's financial advisor;
 -- JP Morgan's contract to serve as the structuring agent/underwriter;
 -- Jones Hall's contract to serve as bond counsel;
 -- Credit rating fees; and
 -- WIFIA loan application and servicing fees.

Project Evaluation and Analysis

The City does not have the technical expertise and resources available to manage all the financing structures for the WIFIA loan. These services will help the City structure the WIFIA loan in a way that is most advantageous, potentially using other interim financing sources to maximize savings.

Fiscal Impact

Total project cost funded from Wastewater Management - Wastewater Infrastructure Subfund. If other sources of low-cost grants or loans are available, the project budget will be increased to fund financial consulting services and feed required to apply for and underwrite those funds. The Program Management Consultant's costs to prepare applications for and administer grants and loans is covered under Project 830240.

835500 - Cleanwater Program Reserve

Originating Year:	2021	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Allison Boyer

Project Description/Scope/Purpose

The Cleanwater Program is a complex infrastructure endeavor spanning over 20 years and estimated to cost more than \$1B. The 30 capital projects encompassed by it are closely interrelated and integrated to accomplish the goal of rebuilding the Water Pollution Control Plant. Like other capital programs of this size, there is a great deal of cost uncertainty, due to both external factors and the evolution of project designs. It is sometimes necessary to defer previously scoped elements, to control the total Program cost. At the same time, all elements of the Program provide a benefit, and deferring any element results in the loss of that benefit and may have other negative consequences.

To maximize the Program benefits while staying within budget, a mechanism for balancing costs across projects is necessary. This project provides the vehicle for accumulating savings that result from fiscally conservative management decisions, so it can be appropriated toward reinstating deferred elements in future fiscal years.

Project Evaluation and Analysis

If construction bids on any project are lower than expected, or if construction contingency is still unspent at project completion, the rest will be transferred into this project to further fund other Cleanwater Program needs, such as deferred rehabilitation.

Fiscal Impact

No additional funding is proposed.

835530 - Cleanwater Center - Stage 2

Originating Year:	2021	Project Type:	Cleanwater Program	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project, along with Project 833240 - Cleanwater Center - Stage 1, entails constructing a new Cleanwater Center that will house administration, outreach, operations, laboratory, compliance inspection, and maintenance functions. It also includes additional temporary facilities for staff who will be displaced by construction. The Cleanwater Center is triggered by two drivers: (1) a site conflict between the temporary maintenance building erected under Project 833210 and the planned footprint of aeration basins constructed under Project 833420, and (2) the substandard condition of existing facilities.

As currently planned, the new Cleanwater Center will replace the functionality of the existing Administration Building, Laboratory/Control Building, Compliance Inspection Building, and Maintenance Building. To control costs, only Stage 1 had been funded in the previous budget cycle. The scope of Stage 1 is limited to design of the Cleanwater Center through 90% design, landscaping and design and construction of the Recycle Yard parking lot, including 95 parking stalls and design and construction of the Recycle Yard parking lot and site civil improvements along what was formerly Carl Road.

Stage 2, which is newly-funded in this budget cycle, will complete the design and construction of the 29,000 square foot multi-story Cleanwater Center. The Architectural Design phase of the project started in FY 2016/17 and will be completed in FY24/25.

Project Evaluation and Analysis

The 2016 SCWP Master Plan included a support building programming evaluation of space use and needs for the following functional areas: (1) administration, (2) operations and control, (3) maintenance, (4) laboratory, (5) compliance inspection. The resulting project concept consisted of a new maintenance building within the WPCP fence line and a combination administration-laboratory building on Recycle Yard, across Carl Road. Significant regulatory hurdles and expensive modifications to the building foundation to address newly-anticipated permitting requirements prompted a reconsideration of the project definition. The reconceptualized project is a combination administration-laboratory-maintenance building—dubbed the Cleanwater Center—inside the WPCP fence line, overlapping the existing administration building site.

Fiscal Impact

This project is eligible for low-interest financing through the SCWP Phase 2 WIFIA loan.

THIS PAGE IS INTENTIONALLY BLANK

SOLID WASTE

THIS PAGE IS INTENTIONALLY BLANK

The Solid Waste and SMaRT Station® long-term financial plans include projects related to the maintenance and operation of the City's solid waste system.

MAJOR SOLID WASTE PROJECTS

The current budget includes funding for Solid Waste projects related to recycling programs, the SMaRT Station, and the landfill. Major projects include:

Zero Waste Strategic Plan. Council has adopted a Zero Waste Policy that aims to divert 90% of the City's waste from landfill by 2030. The budget includes \$7.8 million to fund outreach for both SB 1383 and ongoing general recycling programs. SB 1383 requires the City to initiate new collection programs (such as multi-family yard trimmings collection and expansion of commercial food scraps collection). As individual elements of the strategic plan are put in place, ongoing costs associated with them move to the Solid Waste operating budget, with many of the new programs incorporated into the new agreement with Specialty Solid Waste and Recycling.

SMaRT Station Equipment Replacement & Operations. There is one project to complete a major update of the SMaRT Station facility. This project is budgeted at \$50 million and will be bond funded. Approximately two thirds of the debt service on the bonds is anticipated to be paid by Sunnyvale, similar to the financing methods used when the facility was first constructed in 1993. The retrofit project will increase the organics diversion, help us embrace cutting-edge recycling technologies, become a power-efficient facility, prepare for a more sustainable future and it will optimize efficiencies using automation. The project will entail installing optical sorters, separators and screens, metering bins, compactors, and other equipment. It also includes facility infrastructure upgrades including, but not limited to resurfacing of the tip floor, new electrical service line, and other building upgrades. The project is expected to be complete by the end of 2026.

801351 - SMART Station Equipment Replacement, Sunnyvale Portion

Originating Year:	1996	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Chris Lehon

Project Description/Scope/Purpose

This project funds the City of Sunnyvale's share of the SMaRT Station Equipment Fund. Periodic equipment replacement is necessary to ensure cost-effective operations. The replacement reserve funded by this project addresses repair costs of about three dozen components of equipment, facility, and property; each with its own useful life. A related project, 811250 - SMaRT Station Equipment Replacement, shows total partner expenditures as opposed to Sunnyvale's annual contribution.

Project Evaluation and Analysis

The timing and approach to replacement of various equipment items is evaluated annually with the goal of pursuing the most cost-effective path (repair, replacement, refurbishing, or removal) for each project component. Costs for equipment replacement are reduced in the years shortly before and after the replacement of the entire station in FY 2024/25 to FY 2025/26 (estimate).

Fiscal Impact

This project represents the City of Sunnyvale's contribution to the SMART Replacement Fund. Actual equipment replacement expenditures differ from revenues year to year as fund reserves are used to normalize contributions by each partner.

811250 - SMART Equipment Replacement

Originating Year:	1996	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Chris Lehon

Project Description/Scope/Purpose

This project replaces and maintains City-owned equipment and facilities at the Sunnyvale Materials Recovery and Transfer Station (SMaRT Station). The SMaRT Station is operated for the cities of Sunnyvale and Mountain View under a Memorandum of Understanding (MOU) that will expire December 2036. The cost of replacing the SMaRT Station is shown in Project 828260 (SMaRT Rebuild) with construction starting in late Fall 2025

This project funds replacement of about three dozen components of the equipment and facilities, each with its own useful life. Costs for equipment replacement are reduced in the years shortly before and after the replacement of the entire Station (FY 2025/26). Contributions to the fund might decrease once the facility is upgraded.

Project Evaluation and Analysis

The timing and approach to replacement of various equipment items is evaluated annually with the goal of pursuing the most cost-effective path (repair, replacement, refurbishing, or removal) for each project component. Equipment replacement costs were reduced to no contributions for the past two fiscal years shortly before the estimated refurbishing of the Station during FY 2025/26

Fiscal Impact

This project is funded by payments to the SMaRT Equipment Replacement fund from the cities of Sunnyvale and Mountain View, approximately a 70/30% allocation. Actual expenditures differ from revenues year to year as fund reserves are used to normalize contributions by each Partner. Actual expenditures differ from annual revenues as fund reserves are used to normalize yearly contributions by Partner cities

Funding Sources

Contributions from Partner agencies: Cities of Sunnyvale and Mountain View. Project 801351 represents only Sunnyvale's contribution to this project and is funded by the Solid Waste Management Fund.

821170 - SMART Operations Contract RFP

Originating Year:	2000	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Chris Lehon

Project Description/Scope/Purpose

This project funds development, issuance, and evaluation of a Request for Proposals (RFP) to operate the City's Sunnyvale Materials Recovery and Transfer (SMaRT Station). An updated contract was approved during FY 2021/22. Project costs include funds for another RFP process every seven years in advance of the expiration of the existing contract.

The SMaRT Station Operating Fund will be reimbursed for the project cost by Sunnyvale and Mountain View, based on their proportions of all franchised hauler tons delivered to SMaRT in the year the expenditures occur. For purposes of budgeting, the shares of revenues and operating costs were recalibrated starting in FY 2021/22 to reflect Palo Alto's departure. The proposed budget is based on the expenditure history of the most recent RFP.

Project Evaluation and Analysis

In lieu of a competitive process, an extension could be negotiated. However, analysis of previous extension proposals has shown that pricing and/or terms have not been as favorable to the City compared to funding this project and conducting a competitive procurement. Benefits of competitive procurement include an unfettered opportunity to modify contract terms in response to changes in law, technology, and market conditions. Business and operational impacts include refuse collection, transfer and disposal, recyclable materials collection, processing and marketing, and the equivalent services that the City provides to its partners per the SMaRT Memorandum of Understanding. If this project is not funded, the City will not be able to pay for a competitive procurement.

No operating costs result from an RFP process, but operating savings will likely result from use of a competitive process rather than a sole source procurement or a contract extension.

Fiscal Impact

Project costs include funds for RFP process for the operation of the SMaRT Station every seven years. Total cost is split between the two partner cities.

Funding Sources

Contributions from Partner agencies: Cities of Sunnyvale and Mountain View. Project 821181 represents only Sunnyvale's contribution to this project and is funded by the Solid Waste Management Fund.

821181 - SMART Operations Contract RFP, Sunnyvale Portion

Originating Year:	2000	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Chris Lehon

Project Description/Scope/Purpose

This project funds the City of Sunnyvale contribution to the Sunnyvale Materials Recovery and Transfer Station (SMaRT Station) Operations Fund for its share of the cost of development, issuance, and evaluation of a Request for Proposals (RFP) for SMaRT Station operation. A related project, 821170, funds the total expenditure for all the Partners. The cost of the RFP project is shared the Cities of Sunnyvale and Mountain View. Sunnyvale's share is based on the two cities' proportionate shares of total franchised hauler tons delivered to the SMaRT Station. Project costs include funds for the RFP process every seven years in advance of the expiration of the existing contract.

Project Evaluation and Analysis

An extension could be negotiated with the incumbent contractor in lieu of a competitive process. However, analysis of previous extension proposals has shown that pricing and/or terms have not been favorable to the City when compared to funding this project and conducting a competitive procurement. Benefits of competitive procurement include an unfettered opportunity to modify the contract terms in response to changes in law, technology, and market conditions. Business and operational project impacts include refuse collection, transfer and disposal, recyclable materials collection, processing and marketing, and the equivalent services that the City provides to its partners per the SMaRT Memorandum of Understanding (MOU). If this project is not funded, the City will not be able to pay for a competitive procurement for the operations contract. For budgeting purposes, the current partnership group is assumed to continue in its current role throughout the 15-year plan of the new MOU.

Fiscal Impact

Project costs include Sunnyvale's share of funds for RFP process for the operation of the SMaRT Station every seven years.

824261 - Solid Waste Cost of Service Study

Originating Year:	2006	Project Type:	Solid Waste	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

The Finance Department plans to perform a cost of service (COS) study on the solid waste collection and disposal system every five years. This helps to ensure that costs are properly and equitably allocated among the various customer classes, and that costs are being fully recovered in rates. The COS study was last completed in FY 2021/22. There is an additional study being done in FY 2024/25 to capture additional services added in recent years to comply with SB 1383. The study includes evaluation of current services and disposal costs, time and motion data, contractor payment and city costs, and distributes costs based on the tonnage generated by each customer sector.

The City began setting rates based on cost of service after Council approval of the cost of service policy in 1993. As cost centers change over time, rates tend to drift away from the cost of service. This can harm the cost-effectiveness of operations, as customers get economic signals that cause them to choose services in ways that increase costs more than revenues. Thus, rates must be periodically reviewed. The project cost estimate is based on historical costs.

Project Evaluation and Analysis

City policy and state law require that the rates be periodically restructured in a way that equitably allocates program costs among rate payers (Council Policy 7.1.B.1.4). An alternative to using a consultant would be for staff to conduct the COS study. However, city resources and staff hours are not available for a project of this magnitude. If the project is not completed, it is possible that rates will not reflect actual costs, will not provide the complete cost-recovery needed to provide waste collection and disposal services, and costs may not be equitably allocated per city policy.

Fiscal Impact

The studies completed through this project will ensure utility rates are consistent with the true cost of providing the utility service and provide enough revenue to operate the utility. This is a requirement of Proposition 218, and the results of the analysis will be used to determine utility rates for each customer class.

824741 - Landfill Constituents of Concern Monitoring

Originating Year:	2004	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Sunanda Katragadda

Project Description/Scope/Purpose

This project provides funding for monitoring of the Sunnyvale Landfill "Constituents of Concern." The Regional Water Quality Control Board (RWQCB) enforces regulations that require the City to routinely monitor the groundwater, surface water, and leachate in and around the closed landfill. The landfill is in Corrective Action status, for which the regulations normally require annual "Constituents of Concern" sampling and analysis for the full list of possible pollutants, regardless of whether they have previously been detected at the site. However, the RWQCB has discretion to approve less frequent monitoring and has approved the City's Corrective Action Plan, which calls for "Constituents of Concern" monitoring to occur once every five years. A total of 24 samples of groundwater, leachate and surface water are collected, with the samples sent to a contract laboratory for analysis. A report on the results is prepared by an engineering consultant and sent to the RWQCB.

Project Evaluation and Analysis

There are no alternatives to the project. California Code of Regulations (CCR) Title 27, Division 2, Chapter 3, Subchapter 3 requires the "Constituents of Concern" sampling and analysis to be done at least once every five years. Eliminating or postponing the project would put the City out of compliance with its Corrective Action Plan and its Waste Discharge Requirements and expose it to RWQCB citations, fines, and litigation.

The cost for sampling and analysis is based on the contracted cost of the FY 2024/25 sampling/analysis event. The project has no impact on operating costs: it exists to isolate this infrequent, but costly, "Constituents of Concern" sampling and analysis cost from the operating budget.

Fiscal Impact

Monitoring the project is required by CCR Title 27 once every 5 years. The project is funded by Solid Waste Management Fund revenues.

825911 - Landfill Gas Flare and Blowers Maintenance

Originating Year:	2006	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Sunanda Katragadda

Project Description/Scope/Purpose

State and Federal regulations require the City to continuously collect and destroy landfill gas (LFG) produced by decomposition of garbage in the closed Sunnyvale Landfill. The gas is normally burned by engine-generators at the Water Pollution Control Plant (WPCP) to make electricity and is only burned in the LFG flare when the generators are off-line. Two blowers are alternately used to provide vacuum to the LFG collection system, delivering gas to the flare. The flare, blowers, and related equipment installed in 1987 had been expected to have a useful life of 30 years, but actually required replacement in 2013, after 26 years.

With the closure of the landfill in 1993, LFG quantities had declined below 300 standard cubic feet per minute (SCFM) and continued to drop. The old Surlite flare was too large for the low rates of LFG flow, and was having difficulty achieving the 1400° F minimum exhaust temperature required by the Bay Area Air Quality Management District (BAAQMD). Replacement of the flare was necessary for regulatory compliance. The flare, blowers, motors, and check valves were replaced during the latter part of 2013 with smaller equipment that can be modified for even incrementally lower LFG flow quantities as LFG flow continues to decline. Currently, this flare configuration is anticipated to be adequate for another 13 years. A capacity retrofit to match even lower gas flows is budgeted at 5% of cost and shown in FY 2026/27. Cost estimates are based on vendor quotes and consultant and staff estimates. The blowers and flare, replaced in 2013, are currently expected to have last another 13 years, if periodically refurbished.

Periodic preventive maintenance of the flare is necessary to maintain the integrity of its function. The flare wall is rusting/corroding and showing wear. If the flare wall continues to rust/corrode it can compromise the flare walls and consequently flare functionality. The project involves preparing the flare by way of sandblasting before applying coatings and paint. Special coatings and paint are required, per manufacturer's specifications, to withstand the flare temperatures of over 1400° F.

Project Evaluation and Analysis

The consulting engineers had estimated the lower limit of blower operation to be 317 SCFM of LFG. Staff projections showed that this limit had been reached. The 25 horsepower (HP) blowers were unable to operate effectively and the check valves were too large for this flow rate. They were replaced with blowers that are anticipated to allow their use through FY 2031/32. By FY 2031/32 the landfill will have been closed for 39 years and, depending on gas generation rates, it may be possible to make a case at that time for turning off the landfill gas collection system.

Fiscal Impact

The project is funded by Solid Waste Management Fund revenues.

827560 - Drone Mapping and Settlement Analysis of the SV Landfill

Originating Year:	2008	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Sunanda Katragadda

Project Description/Scope/Purpose

This project provides, at maximum five-year intervals, drone photo and settlement analysis of the Sunnyvale Landfill. Stereo-paired drone photography is used to produce updates of landfill topographic maps. Comparison of the topography of the new and previous maps, via overlays, indicates the degree of settlement. An engineer's analysis of the settlement is performed to identify the possible occurrence of differential settlement and related potential impacts to the landfill, its facilities and equipment, and potential slope stability issues.

Project Evaluation and Analysis

Drone photography is the best and most cost-effective method of monitoring landfill settlement and potential differential settlement. Analysis of resulting data allows identification of areas more prone to damaged facilities and equipment (e.g., cover, piping), and areas of potential slope instability. Performance at five-year intervals is required by California Code of Regulations (CCR) Title 27, Section 21142. However, more frequent analysis is a cost-effective method of maintaining optimal functioning of the landfill gas collection system, which provides significant energy savings by generating electricity used to power the Water Pollution Control Plant.

Project costs include contracting with a vendor to perform the drone photography, and analysis of settlement by a qualified engineering firm. Failure to perform required monitoring would place the City in non-compliance, resulting in assessment of fines against the City, and possibly increasing costs for landfill repairs.

Fiscal Impact

Engineer's analysis of settlement is required by California Code of Regulations (CCR) Title 27, Section 21142 every five years. This project is funded by Solid Waste Management Fund revenues.

828260 - SMaRT Post-2021 Rebuild

Originating Year:	2009	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Deepti Jain

Project Description/Scope/Purpose

This project upgrades the city-owned Sunnyvale Materials Recovery and Transfer Station (SMaRT Station) with new sorting and recycling equipment. This facility operated for 30 years by FY 2023/24. At the present time, the facility serves Sunnyvale and Mountain View under a Memorandum of Understanding (MOU) that expires in 2036. The preliminary cost estimate for design, installation, and construction is in the range of \$33 to \$38 million. The retrofit project will increase the organics diversion, help us embrace cutting-edge recycling technologies, become a power-efficient facility, prepare for a more sustainable future and it will optimize efficiencies using automation. The project will entail installing optical sorters, separators and screens, metering bins, compactor, and other equipment. The project is expected to be complete by the Summer of 2025. The estimate will be reviewed and confirmed in the final design stage of the project. It also includes facility infrastructure upgrades including, but not limited to resurfacing of the tip floor, new electrical service line, and other building upgrades.

Project Evaluation and Analysis

The upgrades will retrofit the existing facility that has been in operation for 30 years. The original 1994 National Recovery Technologies (NRT) mixed waste processing equipment line was replaced in a 2009 infrastructure project. The SMaRT Station exists in a corrosive bay-side environment and feasibility studies show that the metal building and much of the equipment it houses are in need of replacement. It will be designed to match the anticipated delivery quantities and needs of the ongoing facility participants. This will include (1) continued truck transfer to Kirby Canyon Landfill and/or another landfill, and (2) preparation of incoming waste for some to-be-determined waste conversion or energy recovery process.

Fiscal Impact

The design and construction of the \$34M project will be funded by the sale of bonds. Debt service on the bonds is anticipated to be approximately the same (after inflation) as current SMaRT Station debt service costs. Facility participants other than Sunnyvale will pay proportional shares of the debt service in a manner to be described in a new MOU or other participation agreement.

830910 - Zero Waste Strategic Plan

Originating Year:	2013	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Shikha Gupta

Project Description/Scope/Purpose

Staff is implementing the Zero Waste Strategic Plan (ZWSP) approved by Council on April 23, 2013 (RTC 13-085), on which this project is based. Council directed staff to use the ZWSP to increase the City's solid waste diversion rate to 70% by 2015, 75% by 2020, and 90% by 2030. In doing so, Council acknowledged that to implement all of the programs, the cost to solid waste collection rate payers could increase rates by less than 1% to reach 70% and between 4% to 7% (compared to already anticipated rate adjustments) to reach 75%. Planning and implementation to meet these challenging diversion goals has been underway for the last several years including implementing the single-family FoodCycle food scraps program, provision of bar/restaurant glass collection Citywide, provision of commercial food scraps collection to the businesses in CalRecycle's AB 1826 Phase 1 and 2 lists. All of these projects have transitioned to the operating budget as they have become more routine and stable. In addition, the City's new contract with Specialty includes increased costs to meet SB 1383 regulations, which includes mandatory food scraps and yard trimmings collection at multi-family and commercial sites which was completed in 2024. Continual outreach and support for the commercial, multi-family and single-family organics program will be needed in order to encourage and press for high participation rates.

Project Evaluation and Analysis

Steps already taken include (1) the compost facility vendor invested in ways to remove glass/inerts from compost made from material recovery facility (MRF) organics, (2) Sunnyvale Materials Recovery and Transfer Station (SMaRT® Station) contractor installed new equipment that increased diversion of recyclables from municipal solid waste (MSW), (3) collection/marketing of food scraps from residences and large commercial sources, and (4) expanding multi-family recycling to cover all complexes City-wide, per state law, and (5) commercial food scraps and organics collection expanded to all generators. To reach 90% diversion by 2030, (1) commercial food scraps and organics collection will need to be expanded to smaller generators not currently recycling, (12) a consultant will be hired to develop outreach strategies to increase appropriate use of recycling services and develop a waste reduction campaign, and (23) additional materials will be collected curbside if feasible. This project does not fund 90% diversion by 2030 as the necessary technologies are made unavailable by state laws and policies.

Fiscal Impact

Rate increases have been lower than anticipated partly due to the avoided landfill costs from not disposing of food scraps material in the landfill and because the programs have been ramping up at a slower than anticipated rate. Going forward, rates will be impacted at a higher rate due to implications of SB 1383 which requires collection of food scraps from every resident and business in Sunnyvale. The higher costs are reflected in Specialty's contractor payment, not the project budget as in the past. Cost and rate impacts of reaching the 90% goal are unknown at this time, but would be significant.

Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Deepti Jain

Project Description/Scope/Purpose

This project is needed to prepare the area adjacent to the Wastewater Treatment Plant for use as a parking lot for the Cleanwater facility. This consists of replacement of the 0.55 acre Recycle Yard and ~3,750 sf of parking strips aging asphalt/concrete surface with an improved subgrade and a low permeability asphalt pavement suitable for expected parking/traffic loads. The Cleanwater Project is in dire need of parking spaces for the construction crews during the construction phase of the new Water Treatment Facility and following completion of construction, the parking is needed for City Staff. As related previously performed work on the Recycle Yard Site disclosed the fact that there is some residual waste beneath the asphalt in some areas, regulatory agencies are requiring that a low permeability final cover be constructed over the area to prevent landfill gas from escaping, and to prevent water contamination from leakage through the underlying waste into groundwater.

Project Evaluation and Analysis

Site preparation will consist of removal of existing structures, concrete pads, and surficial concrete/asphalt to allow evaluation of the adequacy of the subsurface materials. Underlying baserock, if present, may be removed and stockpiled for future use. Depending on the geotechnical integrity of the material beneath the pavement section, some materials (not meeting project specifications) will be removed to the required depth and replaced with suitable base materials and compacted until an adequate subgrade is achieved. Materials judged unsuitable for use will be properly disposed of at an off-site facility.

Following the subgrade being brought up and compacted to the required elevation and to project specifications, baserock will be placed and compacted in preparation for paving. An approved low permeability asphalt surface will be utilized to bring the parking lot surface to design grade. The section thicknesses, and materials to be used, will be approved by the LEA and Water Board to ensure they are sufficiently impermeable so that a release of landfill gas to the surface, or introduction of surface water to groundwater, will not occur.

Fiscal Impact

The two-year project costs are \$50,000. There are no determined ongoing and post project impacts to these improvements.

Funding Sources

Solid Waste Management Fund

836000 - Anaerobic Digestion and Composting Improvements

Originating Year:	2021	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Deepti Jain

Project Description/Scope/Purpose

This project will reduce the amount of organic waste sent to landfill from the Sunnyvale SMaRT Station. It will increase the amount of organic waste recovered from 1) Source separated food scraps and 2) Mixed solid waste. The project will replace the existing equipment used to process source-separated food scraps and will add new equipment to the mixed waste processing line to recover additional MRF Fines and recyclable material.

Processed food scraps were sent to Sustainable Organic Solutions (SOS) in Santa Clara and into animal feed and fertilizer additive; this contract was terminated in December 2023. Food mash is now sent to several regional waste water treatment facilities and is digested with biosolids, gas is generated, and turned into electricity.

Ultimately, the City plans to send processed food scraps for co-digestion at the Water Pollution Control Plant (WPCP) once it can start accepting this material. The recovered MRF Fines will be sent to the Z-Best Composting Facility and recovered recyclable material will be sold as marketable commodities. The project includes the purchase and installation of the new organics processing equipment. It does not include any on-going public education, collection, processing, maintenance, composting, or anaerobic digestion costs.

Project Evaluation and Analysis

The existing food scraps processing equipment at the SMaRT Station reached the end of its useful life. The existing equipment loses some food scraps when separating food scraps from plastic bags and requires up to 30 minutes to unload a food scraps collection vehicle. The new equipment will more efficiently separate food scraps from plastic bags, decrease collection vehicle unloading times, and increase overall food scraps processing capacity.

Up to 40% of the bagged municipal solid waste (MSW) material is currently sent to landfill from the SMaRT Station because existing equipment is unable to open all the bags. Along with the regular garbage, other materials including compostable paper such as paper towels, cups, and plates, food waste, other organic materials and recyclables are present in the MSW bags. The City's strategy is to recover more MRF fines and recyclables and increase our diversion. Recovery of additional organics also supports the City's Zero Waste Strategic Plan.

Fiscal Impact

Funding for the purchase and installation of the new organics processing equipment is provided by FY 2021/22 CalRecycle Organic Grant Funds in the amount of \$3,000,000. Required matching funds towards professional/engineering services, equipment and grant administration will be covered through SMaRT NextGen project – 828260 and the Solid Waste program operating budget. On-going operating and maintenance costs will be covered through the SMaRT operating budget. New on-going costs for the food recovery equipment are estimated to be lower than the current operating costs since the new equipment will be more efficient and requires less labor to operate. Sunnyvale pays for 100% of the total operating costs of food scrap recovery. Bag opener equipment is expected to increase operating costs by approximately \$5,000 per year. These operating costs will be shared between the cities of Mountain View and Sunnyvale.

Funding Sources

Funding is provided by a State (CalRecycle) grant of \$3,000,000.

836240 - Re-drilling of Five Landfill Gas Wells

Originating Year:	2023	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Sunanda Katragadda

Project Description/Scope/Purpose

Gas extraction capacity of Five (5) landfill gas wells is compromised and they need to be re-drilled to ensure compliance with the Air District regulations and to continue the landfill gas supply to the WPCP for power generation.

Project Evaluation and Analysis

The re-drill project will ensure the City maintains compliance with Air District regulations and continue to provide the WPCP with landfill gas for power generation. In 2014, five landfill gas wells were re-drilled, with a cost of approximately \$50,000.

Fiscal Impact

This project is funded by Solid Waste utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide Solid Waste service.

836370 - Landfill Gas Collection System (LFGCS) Comprehensive Assessment Study

Originating Year:	2023	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Deepti Jain

Project Description/Scope/Purpose

This project will perform a comprehensive assessment of the Sunnyvale Landfill Gas Collection System (LFGCS) as existing under-ground LFGS is having issues due to uneven settlement of the trash and it is impacting our gas collection capabilities and also resulting in permit and non-compliance events. The purpose of the study is to evaluate 1) the existing under-ground LFGCS (pipe network), 2) current gas quantity and quality assessment, 3) current landfill issues, including the impact of the Valley Water levy project and 4) recommend repairs/improvements/modifications to the LFGCS based on the review and findings. This will include providing stamped drawings of any proposed repairs and improvements, and a schedule of repairs.

Project Evaluation and Analysis

An engineering firm will be selected that can review and evaluate 1) the existing LFGCS (pipe network), 2) current gas quantity and quality, 3) current landfill issues, and 4) recommend repairs/improvements/modifications to the LFGCS based on the review and findings. Additionally, the study will provide better insight with maintaining compliance with Air District regulations and has the potential to increase the landfill gas quality/quantity for power generation at the WPCP.

Fiscal Impact

This project is funded by Solid Waste utility rates. Rates are set to cover the cost of operations and capital projects required to maintain the system and provide solid waste service. Implementation of results from the assessment may result in additional costs.

836880 - CalRecycle SB 1383 Local Assistance Grant

Originating Year:	2024	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shikha Gupta

Project Description/Scope/Purpose

CalRecycle created a SB 1383 Local Assistance Grant Program to help jurisdictions comply with and implement requirements under the state law. SB 1383 sets methane emission reduction targets for California to reduce emissions of short-lived climate pollutants (SLCP). Local jurisdictions must reduce organic waste disposal by 50% by 2020 (already achieved by City) and 75% by 2025; and recover currently disposed surplus food by at least 20% by 2025.

The City of Sunnyvale was awarded a OWR4 SB 1383 Local Assistance Grant on Feb. 26, 2024, for \$412,829. The grant term lasts from that date until April 1, 2026. The grant fund covers activities under five categories: edible food recovery, procurement, education/outreach, personnel and record keeping.

The grant will help cover Sunnyvale's portion of Joint Venture Silicon Valley's (JVSV) administration of the Santa Clara County regional edible food recovery program. Grant funds will satisfy another SB 1383 requirement by paying for procurement of compliant mulch that will be applied in City areas that would benefit from application. City staff will also use these funds to bolster education and outreach for food scraps recycling, specifically toward multi-family residents. Sunnyvale will hire a consultant to conduct an outreach pilot program for selected multi-family homes to test different messaging for food scraps recycling. City staff will use funds to also create signage, host Citywide events and deliver presentations. Grant funds will help cover part-time staff to oversee the consultant's work and develop an outreach work plan. OWR4 grant funds will cover two years subscription to the online data management system (Recyclist) that the City uses to document and keep track of compliance.

Project Evaluation and Analysis

The grant requires reports every six months until April 2026 with invoices and progress of the projects. SWD staff will ensure these reports are submitted timely. Staff will track and report all expenditures and describe how funds were spent in progress reports. Reports will also note any locations impacted and impact created, as well as the weight of organics collected or diverted when applicable.

Fiscal Impact

The grant funds received will be used to offset already budgeted costs within the Solid Waste Management program operating budget and the Zero Waste Strategic Plan project budget.

837140 - Construction & Demolition Program RFP

Originating Year:	2025	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shikha Gupta

Project Description/Scope/Purpose

State CalGreen Code requires C&D projects to divert a minimum of 65% of nonhazardous material. City's projects are required to be collected by the franchised hauler or self-hauled. Specialty (franchised hauler) delivers the material to SMaRT station. SMaRT's mixed C&D diversion rate is under 65% which puts the projects in violation of CalGreen. Staff would like to hire a consultant to develop an RFP and help select an alternate C&D processing vendor.

Project Evaluation and Analysis

State CalGreen Code requires C&D projects to divert a minimum of 65% of nonhazardous material taken offsite. Average 5655 tons of mixed C&D is taken to SMaRT station annually. SMaRT's C&D diversion rate is 45% (FY 2023/24) and 54% of projects would be in violation of CalGreen. An alternate facility that can provide the required diversion will help residents meet CalGreen requirements. Specialty contract allows materials to be directed to alternate facilities as approved by the City.

Fiscal Impact

This project is funded by the Solid Waste Management Fund.

837150 - Murphy Ave Solid Waste Enclosures

Originating Year:	2025	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shikha Gupta

Project Description/Scope/Purpose

Murphy Avenue (Downtown) waste enclosures owned and maintained by the City are in dire need of update. The outdated waste enclosures do not meet design codes and are not sized to meet mandated State requirements to collect food scraps separately. Staff is requesting funding for an evaluation of appropriate locations and impacts, design enclosures, and prepare construction documents for permitting and implementation. The project will also include the construction of the enclosures.

Project Evaluation and Analysis

The evaluation will offer the rationale and necessary resources to update the enclosures. This information will be valuable for preparing documentation for the planning and construction of the enclosures.

Fiscal Impact

This project funds the evaluation of the location and design for the enclosures. Any planning or construction activities will be funded separate from this project.

Funding Sources

837160 - Public Litter Cans on Murphy Ave

Originating Year:	2025	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shikha Gupta

Project Description/Scope/Purpose

The Historic Murphy Ave beautification project necessitates the relocation of public litter cans (PLCs). The existing PLCs are deteriorating and urgently need replacement. A total of 20 PLCs in the area must be both replaced and relocated.

Project Evaluation and Analysis

The new public litter cans will offer a more efficient and organized system for managing litter removal in the area.

Fiscal Impact

This project is funded by the Solid Waste Management Fund.

837170 - SMART Station Energy Usage Assessment Study

Originating Year:	2025	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Gerald Lee

Project Description/Scope/Purpose

A Solar Feasibility study conducted in 2014 identified opportunities for additional solar installation on sites such as the SMaRT Station roof and Landfill area. At that time the City of Sunnyvale moved forward with solar installations at the SMaRT Station and the CORP Yard as a result of the study. The SMaRT Station will complete the Next Gen Project by 2026. The resulting upgrade to the facility will result in the addition of technology and systems that will increase the energy demands of the facility. Due to the increased energy demands, and improved technology around renewable energies, we would like to create a project to study the future energy demands of the SMaRT Station and options to offset some of that demand through renewable energies. The study would involve consultant fees for:

1. Looking at our current Power Purchase Agreement (PPA) to assess the current impact and opportunity to convert into a city owned microgrid.
2. Assessing the current / future energy needs of the SMaRT Station (including peak energy demands) and the cost breakdown associated with the energy supply.
3. Researching plans to offset the energy needs through renewable energy.

Recent government funding around Brownfields revitalization has opened up resources to support projects such as converting landfills to solar generation facilities through non-profit consultations and grant support. We would like to capitalize on this opportunity by conducting this evaluation before completion of the Next Gen upgrades while government support is still available.

Project Evaluation and Analysis

We have already identified non-profit organizations to support initial evaluations of Brownfields revitalization (Rocky Mountain Institute (RMI) & Center for Creative Land Recycling (CCLR)). ESD can perform much of the initial assessment in 2025 with the support of non-profits and use city funding for the detailed assessment into alternative renewable energy in 2026 which will align with the 2026 Next Gen project at the SMaRT Station. Since the Material Recovery Facility (MRF) will be offline due to construction; this would be an opportunity to incorporate energy upgrades to the system without disruption to normal business during this period of construction.

This study is needed to understand impacts of the rise in energy consumption and cost for the future viability of the SMaRT Station. This study supports the City's Carbon Reduction Goals (Net Zero Goals) by studying solar feasibility to offset the rise in energy needs due increased automation in the Next Gen Project. The study will also look into grants available to offset some of the costs associated with Brownfields Revitalization.

LEA has identified some local sites that have recently added solar to landfill areas. Our goal is to contact these landfills to identify the consultants they used.

1. Hellyer Landfill, San Jose
2. American Canyon Landfill, Napa County

Fiscal Impact

This project could identify ways to offset all or part of the SMaRT Station electricity costs, which were \$431,956 for calendar year 2024.

837630 - Beverage Container Recycling Equipment

Originating Year:	2025	Project Type:	Solid Waste	Department:	270 - Environmental Services
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Deepti Jain

Project Description/Scope/Purpose

City staff applied for and were awarded a CalRecycle Beverage Container Quality Infrastructure Grant (QIG1) of \$6,575,000 to upgrade the recycling and solid waste processing system at the Sunnyvale Materials Recovery and Transfer (SMaRT) Station®. This grant is a result of the FY 2022/23 Budget Act, Assembly Bill 179, which allocated \$50 million to CalRecycle from the California Beverage Container Recycling Fund. The goal of this CalRecycle Program is to provide infrastructure related to sorting to create clean streams of beverage containers that curbside recycling programs or drop-off collection programs can substantially support.

The City's selected project is one of the nine projects approved for funding. The grant-funded equipment will recover additional beverage containers, aluminum cans, ferrous metal, Polyethylene Terephthalate (PET), High-Density Polyethylene (HDPE), Polypropylene (PP), glass, and carton containers delivered from the cities of Mountain View and Sunnyvale, while also increasing the purity of the recovered material.

Project Evaluation and Analysis

The equipment includes magnetic separators to recover metal containers and clean glass, optical sorters and an associated air compressor system, an eddy current separator to recover aluminum cans, and conveyors to transport the recovered material to designated storage bunkers. This equipment will be installed as part of the NextGen Project contract awarded to Bulk Handling Systems by the Council on May 20, 2025 (RTC No. #25-0307).

Fiscal Impact

This grant will help lower the cost of the NextGen project (828260).

PUBLIC SAFETY

THIS PAGE IS INTENTIONALLY BLANK

PUBLIC SAFETY

Quickly responding to emergencies is essential to life-saving operations, controlling and reducing property damage, and maintaining an orderly city where the community feels safe. The projects included here not only address Public Safety but are also supportive of the overall quality of life in Sunnyvale.

The General Fund primarily funds Public Safety projects. State and Federal grant funds provide supplemental funding for specific enforcement programs and equipment acquisition.

MAJOR PUBLIC SAFETY PROJECTS

Recruitment & Training. To meet the Department's staffing needs, projects have been established to provide ongoing funding for selecting, recruiting, and training new recruits over the next 20 years. These projects directly support the cost of recruitment and training of sworn officers over the twenty-year budget planning period. Each fiscal year, the projected cost for the required number of recruits is allocated to a project budget. Recruits are assigned to cohorts based on their hiring year. The cost of their training over a two-to-three-year period remains in the project until they reach the rank of Public Safety Officer II.

Two new cohorts are planned in FY 2025/26 and FY 2026/27, with costs of \$6.9 million and \$7.0 million. These additions update the annual allocation baseline within the recruitment placeholder project. Starting in FY 2027/28, base funding of \$5.9 million is assumed, with annual inflation applied to better align long-term projections with anticipated recruitment and training costs.

Computer Aided Dispatch System Replacement. The Computer-Aided Dispatch (CAD) system supports dispatch and incident management for law enforcement, fire, and emergency medical services. As the current system approaches end-of-life, it must be replaced with a modern, reliable solution to maintain DPS's critical public safety operations. The project is budgeted at \$45.0 million. Phase 1 has been completed, and a Requirements Traceability Matrix has been produced to guide system configuration and planning. Phase 2 will implement the selected CAD solution, incorporating the findings from Phase 1.

Grant-Funded Public Safety Projects. Public Safety has been awarded multiple grants that are underway. These projects support [traffic safety](#), community policing, frontline law enforcement equipment, [officer wellness](#), and the City's Emergency Operations Center.

BearCat Replacement. Public Safety proposes replacing its aging BearCat armored vehicle to maintain operational readiness and support the safety of personnel and the public. The BearCat is essential for tactical response operations, including active shooter events, hazardous materials incidents, and natural disasters. The current vehicle is nearing the end of its useful life, with rising maintenance costs and limited parts availability. The replacement will ensure the continued delivery of critical public safety services and emergency response. The total project cost is estimated at \$550,000, including purchase, customization, and related expenses, and will be funded through the Fleet Services Fund.

Fire Station Rehabilitation. Based on the recommendations of the Fire Station Master Plan, funding for the design and construction of a new Fire Station 2 is included in the Infrastructure long-term financial plan. Once completed, the new Fire Station 2 will meet current best practices and create additional capacity to help maintain services as other stations are remodeled. Design and construction costs associated with remodeling Fire Stations 1, 3, 4, and 6 have also been incorporated into the twenty-year financial plan. More information about these projects can be found in the [Administrative Facilities section](#).

819840 - Police Services Equipment Acquisition

Originating Year:	1998	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Asset Forfeiture spending plan includes law enforcement equipment and training, and the acquisition of equipment to enhance the handling, processing, and storage of evidence by the Department of Public Safety. Funding is determined annually and reconciled through a Department of Justice report.

Project Evaluation and Analysis

The project is reviewed annually to assess equipment needs and required funding based on recommendations from the Director of the Department of Public Safety. Identified purchases are allowable under permissible use of the federal equitable sharing funds definition set forth by the Departments of Justice and Treasury.

Fiscal Impact

This project is funded by the Asset Forfeiture fund. Equitably shared funds must be used in accordance with the federal Equitable Sharing guidelines, for law enforcement purposes. DPS uses Asset Forfeiture funds to supplement the operating budget of the Police Services, Investigations, and Records/Property programs. Equipment purchased with Asset Forfeiture funds is evaluated on a case by case basis, and is either added to the Equipment Replacement schedule, or disposed of at the end of its useful life. Ongoing operating costs resulting from purchases made with Asset Forfeiture funds will be requested to be incorporated into the department's operating budget.

826351 - Recruitment and Training 20-Year Resource Allocation Project

Originating Year:	2017	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

Funds in this project serve as a placeholder for future recruitment, selection and training costs of Public Safety Officers in the Department of Public Safety. (PSOIT, new recruits) and/or Public Safety Officer 1 (PSO1, lateral recruits). Project funds support all recruitment and selection costs (e.g. job advertisements, job fair registrations, recruitment brochures, testing materials, evaluation materials, backgrounds), all training costs (e.g. academy tuitions and supplies, instructor costs, study materials, department issued uniforms and equipment), and salaries of PSOITs and PSO1s.

Project Evaluation and Analysis

This funding serves as a placeholder for future recruitment, selection and training of Public Safety Officers.

The training process requires the successful completion of all components of Public Safety Officer II training. This includes: Police Academy (28 weeks) (PSOIT only), Police Training Officer Program (20 weeks), Fire Academy (18 weeks), EMT Academy (8 weeks), and Advanced Driver/Pump Operator training (2 weeks). The training schedule for a new PSOIT/PSOI ranges from 18 to 24 months from date of hire.

Specific projects will be developed as sworn staffing needs are better defined in the near term, based on an analysis of average and anticipated separations (retirements and separations due to injury, failure of probation, resignation, and termination). Costs can vary significantly from year to year depending on the ongoing assessment of hiring needs.

Fiscal Impact

This project is funded by the General Fund. The placeholder funding will support five to seven recruits per year, based on a current assessment that a project will require the hiring of 11 trainees in the two-year timeline for project completion.

The DPS operating budget does not carry costs for recruiting and training of new officers. Instead, the cost for hiring and training of sworn officers is placed in projects that are funded in two-year allocations, in a series of recurring special projects. This approach allows expenditures to fluctuate each year based on the number of recruitments.

Project appropriations do not lapse at the end of the fiscal year as operational appropriations do. Since recruitment and training expenses span up to 24 months or more, this allows the total recruitment class to be completed without an additional action to appropriate funds. Project funds are reviewed and updated annually, based on recruits scheduled to complete training. The majority of training costs, including uniforms and equipment, tuition and certifications, is included in the project budget. Field training for fire services is the exception, as this activity occurs when officers reach the level of PSOII, during which time the officer is assigned to a budgeted position.

829510 - Emergency Medical Dispatch First Responder Incentive Funding

Originating Year:	2012	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The intent of the incentive funds is to provide financial support to cities in their work to enhance emergency medical services dispatch capabilities by developing recommendations for the emergency medical services system, implementing a medical priority dispatch system (MPDS), and revising emergency medical dispatching (EMD) standard operating procedures and policy. MPDS is a critical tool used by dispatchers to assess the type of EMS calls processed through a dispatch center so medical care can be started as soon as possible.

Project funds will also be used to establish an alternate PSAP (Public Safety Answer Point) at a County facility, which can be used in the event that a disaster or local emergency renders the DPS communications center inoperable.

Project Evaluation and Analysis

The funds received will be used to determine the most effective use of EMD and MPDS, identify objective criteria and establish benchmarks that may be used to improve system efficiencies and patient outcomes, upgrade communications equipment and technology, and train dispatchers in new and changing MPDS and EMD procedures. The project life runs concurrent with Rural Metro services contract to Santa Clara County.

Fiscal Impact

This project is funded by the Santa Clara County Emergency Medical Services Agency. The annual amount is subject to change, and has been historically increased each fiscal year.

Equipment purchased with EMS Rural Metro Trust funds is evaluated on a case by case basis, and is either added to the Equipment Replacement schedule, or disposed of at the end of its useful life. Ongoing operating costs resulting from purchases made with EMS Rural Metro Trust funds will be requested as either an addition to the equipment replacement schedule or as an addition to the department's operating budget should external funding not be available.

830660 - Emergency Medical Services (EMS) Project Funding

Originating Year:	2014	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

To support the County of Santa Clara Emergency Medical Services (EMS) System , the County may provide funding to EMS First Responders for the purchase of products or services that provide a benefit to the County of Santa Clara EMS System. The project supports initiatives such as the ePCR (Electronic Patient Care Records) program, which utilizes technology to allow first responders to transfer "patient side" critical care information directly to a medical facility.

Project Evaluation and Analysis

This project is funded by a grant from the Santa Clara County Emergency Medical Services (EMS) Enhancement Projects Funds. Funding allocations are made to each fire department in Santa Clara County based on a per capita formula. Grant funds are allocated by the County as available and are awarded to meet specific program goals, such as: implementation of the ePCR program. completion of the necessary computer software interfaces, and to purchase the necessary computer hardware, and miscellaneous equipment such as training manikins for EMS response.

Fiscal Impact

This project is funded by a grant from the Santa Clara County Emergency Medical Services Agency. Funds are appropriated as received.

Equipment purchased with grant funds is evaluated on a case by case basis, and is either added to the Equipment Replacement schedule, or disposed of at the end of its useful life. Ongoing operating costs resulting from purchases made with grant funds will be requested to be incorporated into the department's operating budget.

832220 - Fire Prevention (Non-HazMat) Technology Project

Originating Year:	2017	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

This project supports the implementation of the Digital Health Department (DHD) electronic reporting, permitting and inspection database, plus administrative and IT support and equipment and field tablet maintenance, support, and replacements. Additionally, this project will support technological advancement needs in the field of Fire Prevention, not including Hazardous Materials.

Project Evaluation and Analysis

AB 2286 mandated electronic reporting of hazardous materials information to CalEPA. Project 829310 was created using California Environmental Reporting System (CERS) Grant Funds for the initial cost of the project and implementation phase. This project funds the second phase (completion of DHD software installation and configuration), and provides for the replacement of laptops and tablets for employees in the Fire Prevention unit who provide field inspection and reporting data to DHD.

The project will remain open to process any residual payments.

Fiscal Impact

This project is funded by the General Fund and offset by Technology Fee revenue, so there is minimal fiscal impact to the General Fund.

Equipment purchased with project funds is evaluated on a case by case basis, and is either added to the Equipment Replacement schedule, or disposed of at the end of its useful life. Ongoing data costs resulting from purchases made with project funds will be funded through FY25/26. Thereafter, ongoing data and replacement costs will be included in department rental rates. It should be noted that ongoing operating costs are supported by revenue from Technology Fees (Fire Prevention Permits).

Funding Sources

General Fund

832260 - Office of Emergency Services

Originating Year:	2017	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Office of Emergency Services (OES) provides services to the community and to City departments focusing on disaster planning and recovery assistance. Project funds will be used to continue building the capacity of OES. This includes: 1) consultant services to assist and advise with emergency management response design, the development of relevant guides, manuals, documents and materials, and Emergency Management Organization (EMO) training and implementation; and 2) assessment, repair and replacement of ARK program pods throughout the City and the replenishment of supplies as needed.

Project Evaluation and Analysis

While the Department of Public Safety has made great strides in the development of the Emergency Operations Center (EOC), EMO, and disaster preparedness, additional support and resources are required to further strengthen the City's ability to respond to a large-scale disaster and/or event. The majority of the one-time funds support the services of a consultant and the restoration of ARK pod emergency supplies.

Fiscal Impact

This project is funded by the General Fund. Equipment and supplies needed for this project will be purchased with project funds. Funding sources for future restoration of ARK pod supplies and updates to the City's emergency plan will be evaluated and considered when/if the need arises.

Funding Sources

General Fund

834010 - DPS - SCCPH Tobacco Decoy Operations

Originating Year:	2019	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Department of Public Safety (DPS) is partnering with Santa Clara County Health as a sub-grantee to fund activities that will help reduce youth access to tobacco products. Grant funds will be used to conduct quarterly decoy operations and participate in a multi-jurisdiction task force. The Division of Special Operations in the Department of Public Safety will be responsible for the management of the grant. Over the course of two fiscal years, a total of seven (8) decoy/sting operations will be conducted by Public Safety Officers in partnership with a Public Safety Cadet or Intern who fits the proper age criteria (under age 21). The goal is to enforce state and local laws, and educate all tobacco retailers in the City over the course of the project.

Project Evaluation and Analysis

This project will promote the City's Community Vision Goal IV: Safe and Healthy Community: To maintain Sunnyvale's traditional high level of public health and safety, so all residents, employees and visitors feel safe at all times and in all places in the City.

By focusing decoy operations on retailers who sell tobacco products and enforcing state minimum age law related to tobacco sales, the Department of Public Safety will reduce youth access to tobacco products and discourage retailers from illegally providing these products to youth under the age of 21.

Fiscal Impact

The grant will reimburse DPS for Overtime and OT Worker's Comp and will supply the funds for undercover buys. The DPS Explorer post will provide youth volunteers to support the decoy operations.

Funding Sources

Santa Clara County Department of Public Health (SCCPH) Grant, through a California Department of Justice grant.

834130 - DPS FY21/22 Recruitment and Training for Sworn Officers

Originating Year:	2021	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

Project funds support all recruitment and selection costs (e.g. job advertisements, job fair registrations, recruitment brochures, testing and evaluation materials, backgrounds), all training costs (e.g. academy tuition and supplies, instructor costs, study materials, department issued uniforms and equipment), and salaries of PSOITs and PSOs and instructors.

The training process requires the successful completion of all the components of Public Safety Officer II (PSOII) training. This includes: Police Academy (28 weeks – PSOIT only), Field Training Officer (FTO) Program (26 weeks), Fire Academy (17 weeks), EMT Academy (8 weeks), and Advanced Driver/Pump Operator training (2 weeks). The training schedule for a new PSOIT/PSOI ranges from 18 to 24 months from date of hire.

Project Evaluation and Analysis

Funding the recruitment, selection and training of new Public Safety Officers through the projects budget allows the cost of recruitment class/cohort to be tracked separately across fiscal years.

Project funds are reviewed and updated annually, based on recruits scheduled to complete training as offset by projected separations in the coming fiscal year (retirements and separations due to injury, failure of probation, resignation, and termination). The majority of training costs, including uniforms and equipment, tuition and certifications, is included in the project budget. Field training for fire services is the exception, as this activity occurs when officers reach the level of PSOII, during which time the officer is assigned to a budgeted position.

This project also supports Council Policy 4.3.1 Support Services - Goals and Policies

Goal 4.3A Sustain a quality work force in order to assure that Public Safety Services are provided in a quality and efficient manner.

Policy 4.3A.1 Train and develop employees to meet state and local standards..

Fiscal Impact

This project is funded by the General Fund. The project funds the recruitment, selection and training of 24 Public Safety Officers-in-training (PSOIT, new recruits) and/or Public Safety Officer I (PSOI, lateral recruit). DPS budgets hiring and training of sworn officers in projects that are funded in two-year allocations, in a series of recurring special projects rather than in the operating budget. This approach allows expenditures to fluctuate each year based on the number of recruitments. Additionally, project appropriations do not lapse at the end of the fiscal year as operational appropriations do. Since recruitment and training expenses span up to 24 months or more, this allows the total recruitment class to be completed without an additional action to appropriate funds.

Project funds support all recruitment and selection costs (e.g. job advertisements, job fair registrations, recruitment brochures, testing and evaluation materials, backgrounds), all training costs (e.g. academy tuition and supplies, instructor costs, study materials, department issued uniforms and equipment), and salaries of PSOITs and PSOs and instructors.

The training process requires the successful completion of all the components of Public Safety Officer II (PSOII) training. This includes: Police Academy (28 weeks – PSOIT only), Field Training Officer (FTO) Program (26 weeks), Fire Academy (17 weeks), EMT Academy (8 weeks), and Advanced Driver/Pump Operator training (2 weeks). The training schedule for a new PSOIT/PSOI ranges from 18 to 24 months from date of hire.

Project Evaluation and Analysis

Funding the recruitment, selection and training of new Public Safety Officers through the projects budget allows the cost of recruitment class/cohort to be tracked separately across fiscal years.

Project funds are reviewed and updated annually, based on recruits scheduled to complete training as offset by projected separations in the coming fiscal year (retirements and separations due to injury, failure of probation, resignation, and termination). The majority of training costs, including uniforms and equipment, tuition and certifications, is included in the project budget. Field training for fire services is the exception, as this activity occurs when officers reach the level of PSOII, during which time the officer is assigned to a budgeted position.

This project also supports Council Policy 4.3.1 Support Services - Goals and Policies

Goal 4.3A Sustain a quality work force in order to assure that Public Safety Services are provided in a quality and efficient manner.

Policy 4.3A.1 Train and develop employees to meet state and local standards.

835150 - DPS Reimbursable Mutual Aid (Out of County)

Originating Year:	2020	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

This project will be used to track the cost of deployment of fire service personnel outside of Santa Clara County, creating a basis for cost recovery analysis that can track across multiple fiscal years if needed. From time to time, police services personnel will also respond to out of county mutual aid in response to fires and other disasters.

Project Evaluation and Analysis

DPS deploys personnel statewide on an as-needed request to provide mutual aid to emergency events requiring fire and law enforcement response. Overtime costs for this activity will be charged and revenue will be tracked to the project to ensure that all eligible costs are recovered.

Fiscal Impact

This project is for tracking purposes and funds will be appropriated as reimbursed by other agencies. DPS operating budget has been historically impacted by the cost of overtime for mutual aid to agencies outside of Santa Clara County. This project removes reimbursable overtime costs from the department's operating budget and places it where it can be tracked, particularly when the reimbursement for an activity crosses fiscal years.

Funding Sources

Expenses will be reimbursed through agreements with CFAA (California Fire Assistance Agreement), California Governor's Office of Emergency Services (Cal OES), and various local agency emergency fund agreements in the General Fund.

Plans and Goals

- SN - Safety and Noise - SN-5: Effective Fire Service Response System
- SN - Safety and Noise - SN-6: Effective Emergency Response Capability

835160 - DPS Police Services Contract Overtime

Originating Year:	2020	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

This project will be used to track the cost of contract overtime for Police Services personnel, creating a basis for cost recovery analysis that can track across multiple fiscal years if needed.

Project Evaluation and Analysis

DPS deploys personnel to various local events to provide Police Services on an as-needed/ requested basis. Overtime costs for this activity will be charged and revenue will be tracked to the project to ensure that all eligible costs are recovered.

Fiscal Impact

This project is for tracking purposes and funds will be appropriated as reimbursed by other agencies. DPS operating budget has been historically impacted by the cost of contract overtime for various local agencies, including the 49ers Stadium. This project removes reimbursable overtime from the department's operating budget and places it where it can be tracked, particularly when the reimbursement for an activity crosses fiscal years.

Funding Sources

Funding will be provided by reimbursement of eligible costs by various agencies on a contract basis in the General Fund.

835320 - DPS State Homeland Security Program [SHSGP] Training Grants

Originating Year:	2020	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Santa Clara County Office of Emergency Management (OEM) strives to ensure the entire community is prepared for significant disasters. OEM maintains readiness to support disaster response, recovery and mitigation. The Department of Homeland Security distributes grant funds that enhance regional preparedness, prevention, and response to terrorist attacks and other disasters. Sunnyvale DPS is a recipient of training and equipment grants as a sub awardee of State Homeland Security Grant Program (SHSGP) funds.

The State Homeland Security Grant Program (SHSGP) Training Grant will provide funds to train Public Safety Special Weapons and Tactical (SWAT) team members and other specialized teams. The proposed training will be focused on tactical response protocols that would be vital in the event of a terrorist attack or other large-scale emergency event, such as an earthquake or major storm. The project budget includes the cost of a consultant to provide training services and officer overtime.

The Division of Special Operations in the Department of Public Safety will be responsible for the management of the grant.

Project Evaluation and Analysis

The Santa Clara County Office of Emergency Management (OEM) strives to ensure the entire community is prepared for significant disasters occurring in Santa Clara County. OEM maintains readiness to support disaster response, recovery and mitigation. The Department of Homeland Security distributes grant funds to enhance the ability of regional authorities to prepare, prevent and respond to terrorist attacks and other disasters. Local agencies use grants for planning, equipment, training, and exercise needs.

Fiscal Impact

No local match is required. It is anticipated that grant funds will cover all proposed grant-related activities and some backfill. Overtime associated with the proposed tactical response training will be funded by the County of Santa Clara Office of Emergency Management grant funds in the General Fund.

Funding Sources

State Homeland Security Grant Program (SHSGP) Training Grant funding in the General Fund.

835610 - Computer Aided Dispatch (CAD) System Replacement

Originating Year:	2021	Project Type:	Public Safety	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

The Department of Public Safety (DPS) uses critical software for Computer Aided Dispatch (CAD) and Mobile Computing (Mobile). CAD supports comprehensive dispatching and incident control for law enforcement, fire, and emergency medical services. The current system is reaching end-of-life and will need to soon be replaced with a modernized system that will meet DPS' needs to deliver critical services to the residents of Sunnyvale. The City anticipates this project will occur in two distinct phases.

During the first phase of the project, the selected vendor will utilize a test/temporary instance of the CAD solution to conduct a comprehensive identification and review of all processes affected as described in the requirements matrix. The outcome of this effort will be to determine critical business processes impacted in the and support product configuration and business process engineering; Findings will be documented in a Requirements Traceability Matrix (RTM) along with documentation to identify where the City would be better served by changing its processes to fit "industry best practices" or "product capabilities." The second phase will encompass implementation of the selected solution refined by the findings of Phase 1.

The City completed Phase 1, fit gap, and consequently the Council approved (FY24-0692) additional 2 phases – fit gap and implementation of a RMS from the same vendor. The cost of licensing and implementing the RMS will require additional funding.

Project Evaluation and Analysis

The system replacement is evaluated through a formal Purchasing process. The Department of Public Safety identified requirements. Purchasing published a Request for Proposal and vendors responded with their ability to address the requirements. Assessment of proposals and site visits were conducted to evaluate vendors. The top vendor will be consigned to create a model of the system which must demonstrate that requirements are met before a final contract is entered.

The primary objective of the system is to provide the ability for the dispatchers to accept, track and monitor emergency calls and dispatch public safety personnel to respond to citizen and businesses requests for assistance. As part of the City of Sunnyvale Department of Public Safety disaster recovery and business continuity plan, the proposed CAD system must also reside in an alternate PSAP (Public Safety Answering Point). A PSAP is a call center where emergency calls for police, fire, and ambulance are responded to by Dispatchers. An alternate PSAP is identical to that of the primary PSAP except that it is physically at a different location. The CAD system in the alternate PSAP will only be used when the primary PSAP is unusable. Nevertheless, the alternate PSAP must always be operationally ready. This means that all updates to the CAD system in the primary PSAP must be made to the CAD system located at the alternate PSAP in real time. It is critical that all requirements for this new system are met, because this is a system that cannot fail.

Fiscal Impact

The total 20-year project cost is \$45 million, including staff cost, equipment upgrade, system maintenance, license cross over 20 years.

Record Management System (RMS) upgrade implementation and staff cost are \$10 million.

835730 - DPS - Edward Byrne Memorial Justice Assistance Grant (JAG) Local Funding

Originating Year:	2021	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The US Department of Justice, Bureau of Justice Assistance issues statewide and local allocations for the Edward Byrne Memorial Justice Assistance Grant (JAG) program. DPS applies for these funds annually, using them to offset the purchase of equipment in support of front line law enforcement activities as outlined in the grant agreements.

Project Evaluation and Analysis

Annual funding allocations will be used to purchase frontline law enforcement equipment that is new, innovative or currently unfunded. US DOJ grants do not allow supplanting. All equipment must be on the most current approved equipment list published by the Bureau of Justice Assistance. Staff will be required to submit quarterly performance reports and claims associated with this grant.

Fiscal Impact

Local grant awards are formula based. There is no local match required. All equipment purchased with grant funds will be evaluated at the end of its useful life. If DPS determines that replacement is needed, DPS will seek outside funding sources. There is no anticipated increased or additional ongoing cost to the City .

835750 - DPS EMPG Grant - EOC Technology

Originating Year:	2021	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Santa Clara County Office of Emergency Management receives California Office of Emergency Services (CalOES) funding annually to support countywide technology upgrades to Emergency Operations Centers (EOCs). DPS is a sub-recipient of these funds under the Office of Emergency Management (Emergency Management Performance Grant - "EMPG"). Project priorities are identified on a regional level, and awarded to the City for based on our specific identified need.

Project Evaluation and Analysis

DPS is one of several sub-recipients throughout the county who receive Emergency Management Performance Grant (EMPG) funds. The DPS EOC serves the entire city/community in the event of a disaster or emergency. Laptops are used by various members of the EOC response team when the EOC is activated. The County 2020 Emergency Management Performance Grant (EMPG) will funds replace existing laptops that allow uniform data communication capabilities and will support a common operating picture and resource management. New laptops will allow for better wireless connectivity, increased security features, and enhanced computing power for collaborative applications.

Fiscal Impact

There is no required Local Match for this grant or Increased Cost to City Upon Grant Termination. All costs associated with the OES laptop replacement and technology upgrades will be fully funded by the County of Santa Clara Office of Emergency Management grant funds. When equipment reaches the end of its useful life, DPS will seek additional grant funding to cover replacement costs.

Funding Sources

County of Santa Clara Office of Emergency Management Performance Grant (EMPG) grant funds in the General Fund.

835760 - DPS Office of Traffic Safety (OTS) Selective Traffic Enforcement Program (STEP) Grants

Originating Year:	2021	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

DPS receives funding from the Office of Traffic Safety to conduct targeted traffic enforcement operations that will supplement the department's ongoing efforts to reduce traffic injuries and fatalities and support the City's investment in the safety and mobility of its residents and workforce.

Project Evaluation and Analysis

The focus of targeted enforcement will be locations in the City where traffic collisions most often occur and will focus on Primary Collision Factors such as speed, impaired driving, and distracted driving. Grant funding will also support DUI enforcement operations, community safety education, and officer training in field sobriety testing and identification of impaired drivers. Funding has also been provided for collaborative traffic enforcement operations with neighboring jurisdictions, targeting both prime collision factors and impaired driving.

Targeted enforcement of key intersections aimed at Primary Collision Factors aligns with the City's General Plan, Policy SN-3.3 Provide investigative services directed toward successful prosecution and conviction of criminal offenders and Policy SN-3.5 Facilitate the safe movement of pedestrians, bicyclists and vehicles. The shared goal of reducing traffic fatalities and injuries is consistent with the city's "Vision Zero" initiative.

The Division of Special Operations in the Department of Public Safety will be responsible for the management of the grant; grant activities will be conducted by the Traffic Safety Unit and Division of Police Services.

Fiscal Impact

All activities associated with this project will be funded by the California Office of Traffic Safety (OTS) Selective Traffic Enforcement Program (STEP) Grant Funds.

Funding Sources

The California Office of Traffic Safety (OTS) takes a leadership role in efforts to make California roadways safe for all users. Through thoughtful, forward-thinking, and data-driven selection of grants to local and state agencies, OTS provides an effective means of eliminating fatalities, injuries, and economic losses resulting from crashes. Through grant funding made available to California by the National Highway Traffic Safety Administration (NHTSA), OTS annually funds over \$80 million dollars in innovative, evidence-based education and enforcement programs and technologies designed to make California's roadways safer.

835790 - DPS FY21/22 DOJ Community Oriented Policing (COPS) Micro Grant

Originating Year:	2021	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

DPS has received US Department of Justice Community Oriented Policing (COPS) Microgrant in the amount of \$51,600. Grant funds will be used by the Department of Public Safety to implement programs that will build community trust and strengthen the relationship between DPS and the community.

Grant funds will be used to host a public engagement event that will facilitate direct outreach to the community. The event will allow officers to meet individuals and share information about the broad range of public safety services in the city. DPS will host the event at the Fire Station 2 training center, leveraging the unique public safety model as a means to connect with community members and provide a deeper understanding of police services.

Additionally, funds will be used to provide advanced training in de-escalation techniques for the DPS Crisis Negotiation Team (CNT). The CNT provides specialized support in handling critical field operations, where intense negotiations beyond the capacity of field officers are necessary. The CNT provides skilled verbal communicators who attempt to de-escalate and produce surrender in critical situations where suspects have taken hostages, barricaded themselves, or have suicidal tendencies. The following POST certified classes will be funded: Crisis Negotiations, Basic and Advanced, Hostage Negotiations. In addition, trained hostage/crisis negotiators will attend the annual California Association of Hostage Negotiators Conference.

Project Evaluation and Analysis

Direct community outreach by DPS aligns with the City’s General Plan, Policy SN-3.4: Reduce crime and fear by strengthening the police/community partnership. The advanced training in de-escalation techniques for the CNT falls in line with Policy SN-3.7: Provide crisis intervention, conflict management and resolution.

Fiscal Impact

None. Grant funds will cover the cost of all activities associated with the project.

Funding Sources

US Department of Justice COPS Grant award #15JCOPS-21-GG-02280-SPPS

836060 - DPS State Homeland Security Grants Program (SHSGP) Project Grants

Originating Year:	2022	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The Santa Clara County Office of Emergency Management (OEM) strives to ensure the entire community is prepared for significant disasters. OEM maintains readiness to support disaster response, recovery and mitigation. The Department of Homeland Security distributes grant funds that enhance regional preparedness, prevention, and response to terrorist attacks and other disasters. Sunnyvale DPS is a recipient of training and equipment grants as a sub awardee of State Homeland Security Grant Program (SHSGP) funds. This project captures funding and expenditures for grant-funded equipment.

Project Evaluation and Analysis

Additional specialized disaster response and hazmat equipment allows Sunnyvale DPS to better support large scale incident response operations for Santa Clara County. With the deployment of these available mutual aid resources, the Sunnyvale DPS Type II Cal OES team would be able to better provide technical support when Santa Clara County Type I Hazmat teams request additional assistance in this area of decontamination expertise.

Fiscal Impact

None. When the equipment reaches the end of its useful life, DPS will evaluate the need for replacement and seek outside funding sources if it is determined that replacement is warranted.

Awards:
ABM22-0788 \$9,695
ABM23-0897 \$28,500

Funding Sources

All costs associated with the purchase of specialized disaster response equipment will be funded by the County of Santa Clara Office of Emergency Management grant funds in the General Fund.

836120 - DPS BSCC Officer Wellness Grant

Originating Year:	2023	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

California Bureau of State and Community Corrections Grant funding will be used for an Officer Wellness and Health program in the Department of Public Safety.

The Officer Wellness grant is for the purpose of improving officer wellness and expanding mental health sources as follows:

1. Establishing officer wellness units or expanding existing officer wellness units.
2. Establishing peer support units or expanding peer support units.
3. Services provided by a licensed mental health professional, counselor, or other professional that works with law enforcement.
4. Expanding multiagency mutual aid programs focused on officer wellness and mental health.
5. Other programs or services that are evidence based or have a successful track record of enhancing officer wellness.

Project Evaluation and Analysis

In accordance with Assembly Bill 178, Chapter 45, Statutes of 2022, Item 5227-121-0001, the state of California awarded DPS \$139,012.37. This funding is available to all city and county law enforcement agencies employing officers described in Section 830.1 of the Penal Code.

DPS will use funds for purchase of fitness equipment for the newly remodeled fitness area in DPS Headquarters, to fund as needed services from West Coast Post-Trauma Retreat, and to provide in-house wellness training courses for DPS sworn staff.

The grant agency requires that all allocated funds be spent prior to December 1, 2025. Unspent funds must be returned to the state.

Fiscal Impact

Activities proposed under this project will be funded by the Bureau of State and Community Corrections (BSCC) Officer Wellness Grant. On going costs to the City will include replacement of fitness equipment for the DPS headquarters fitness center.

Funding Sources

836980 - Evaluate Municipal Code and Modernize Parking Requirements and Restrictions

Originating Year:	2024	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

This project is for a study to evaluate and modernize Sunnyvale Municipal Code Section 10.16.120, which prohibits the use of streets or public parking facilities for the storage of vehicles. This study will address concerns raised by residents and City Council regarding the limited availability of parking on public streets and the challenges in enforcing existing parking restrictions. The study will compare current municipal code language and enforcement practices with those of nearby municipalities and explore the potential benefits of modifying existing regulations.

Project Evaluation and Analysis

As part of RTC 24-0090, Council directed staff to evaluate and modernize parking requirements in response to limited availability on public streets. This study focuses on Sunnyvale Municipal Code Section 10.16.120, which prohibits the storage of vehicles on streets and public parking facilities. The study aims to examine how surrounding jurisdictions handle similar parking regulations, particularly regarding oversized vehicles near schools and parks. The study was approved for a 1-year evaluation by the Council and will include community outreach and best practices from other municipalities.

Fiscal Impact

The estimated cost to conduct the study is \$50,000 to hire a consultant who will perform a comparative analysis with other jurisdictions and lead community outreach efforts. Further financial considerations will depend on the recommendations resulting from the study, including potential costs for technology upgrades or additional staffing for enforcement.

837070 - CalWater Firefighter Equipment

Originating Year:	2024	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

Allocation of \$10,894 awarded from the 2024 Cal Water Grant to purchase wildland firefighting PPE. This includes helmets with face shields and gear packs for carrying tools and supplies. Funds will cover costs for PPE to protect personnel from heat, debris, and other hazards.

Project Evaluation and Analysis

This wildland PPE is essential for ensuring firefighter safety during wildfire incidents in the rapidly expanding urban-wildland interface areas within and surrounding the City of Sunnyvale. The acquisition of this equipment will enhance the department's capacity to respond effectively to wildfires, thereby improving community resilience and mutual aid support.

Fiscal Impact

There are no ongoing operating impacts.

837230 - Emergency Operations Communications Support

Originating Year:	2025	Project Type:	Public Safety	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Jennifer Garnett

Project Description/Scope/Purpose

Develop the communications materials necessary to conduct essential and robust public outreach during an emergency response. This includes plans, templates, and checklists. Identify staff and potential community partners who would support the EPIO function. Establish a training plan and materials for these staff and partners.

Hire a consultant with extensive emergency communications experience to assist the Chief Public Information Officer with this project.

Project Evaluation and Analysis

The City has a generic job aid and checklist for the EPIO function but lacks the detailed and multi-lingual supporting materials needed in the event of an emergency. Having these materials prepared in advance for various types of disasters (e.g., earthquakes, cyber attack, floods) would speed our response to the community and media when time is of the essence. The communications function is typically overwhelmed during emergencies so building a support team of staff and partners is critical to sustain our public outreach during a disaster.

Fiscal Impact

One-time cost of \$35,000. Based on consultant cost estimates: hourly rate of \$145/hr. 10 hours/week for 6 months.

Funding Sources

General Fund

837500 - BearCat Replacement

Originating Year:	2025	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

DPS seeks to replace its aging BearCat armored vehicle with a new vehicle to maintain operational readiness and ensure the safety of personnel and the public. This vehicle, integral to DPS's tactical response capabilities, will support high-risk operations, including active shooter incidents, hazardous materials responses, and natural disasters. The replacement is essential due to the current vehicle nearing the end of its service life, with parts becoming increasingly expensive and difficult to source. The new vehicle will ensure continuity of critical services, particularly in protecting vital infrastructure and responding to emergencies across Sunnyvale and the region.

Project Evaluation and Analysis

The BearCat has served DPS and Santa Clara County for 16 years, demonstrating its necessity in high-risk scenarios. However, the current vehicle's condition limits its reliability, requiring a replacement to maintain service standards. The proposed replacement offers advanced safety features, including superior ballistic protection, enhanced maneuverability, and integration with modern technology. The new vehicle will allow DPS to continue responding to regional and local emergencies efficiently, ensuring compliance with Homeland Security goals such as protecting critical infrastructure and enhancing multi-jurisdictional response capabilities. The investment ensures that DPS can sustain its critical response capabilities without disruption, providing a cost-effective solution for public safety while addressing growing concerns over active shooter incidents and other emergent threats.

Fiscal Impact

The total project cost is estimated at \$550,000, covering the purchase, customization, and associated expenses for the replacement.

837530 - Drone as First Responder Program (DFR) Research and Outreach

Originating Year:	2025	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

For the research and outreach of a Drone as First Responder (DFR) Program to enhance emergency response capabilities and resource efficiency. The program builds upon DPS's existing drone operations, adding prepositioned drones capable of rapid deployment to calls for service. These drones, piloted remotely, can arrive at incident locations faster than ground units, providing real-time video intelligence to assist in decision-making and resource allocation.

Project Evaluation and Analysis

The first year of the Drone First Responder (DFR) Program will involve additional research and community outreach to assess feasibility and public sentiment. The project will begin with additional exploration of similar DFR initiatives in other jurisdictions, which have shown a reduction in ground unit deployments for specific calls, freeing personnel for other critical incidents. Following this, the project will explore costs for an ongoing DFR contract, enhancing call verification, response prioritization, and resource deployment, improving operational efficiency and public safety outcomes for both DPS personnel and the community.

Fiscal Impact

This \$50,000 funding request supports the initial phase of the Drone First Responder (DFR) Program, covering additional research, community outreach, and exploration of costs for an ongoing DFR contract.

837540 - Mobile Video & Audio Recording System

Originating Year:	2025	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The old L3 MVAR system was replaced by the Axon MVAR system under a Fleet service contract, which is why no replacement funds were allocated—the funds were transferred to Axon MVAR. The L3 system was originally intended to be retired after the transition; however, the Department of Public Safety (DPS) opted to keep it online. Currently, DPS staff can access the data by contacting L3, though we do not have an active contract with them. The vendor is fulfilling our requests as a goodwill gesture.

Project Evaluation and Analysis

This \$50,000 funding request facilitates the migration of legacy L3 MVAR video files to Axon's Evidence.com platform, ensuring the secure retirement of the outdated L3 MVAR system. The project guarantees seamless data transfer, compliance with evidence management standards, and continued accessibility for staff.

Fiscal Impact

Replacement cost with DPS as part of Axon Replacement planning assumes one-time only cost.

837550 - Interview Room A/V Recording

Originating Year:	2025	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

Request to replace the EOC Interview Room recording system, currently part of the Avigilon Surveillance System that was installed during the Emergency Operations Center's (EOC) initial construction. The current system does not meet Investigations operational needs. It was proposed during IT Solutions to switch systems to address these issues. The replacement will target only the interview room component, leaving the rest of the Avigilon system unchanged, as it is still new. The project includes purchasing, installing, testing, and integrating the new system to ensure it functions properly within the EOC.

Project Evaluation and Analysis

DPS needs to swap out the current interview room system because the current system does not fulfill DPS's needs. Switching to another system that integrates with our current evidence platform will give us the functionality necessary to provide effective police services.

Fiscal Impact

\$75,000 initial installation cost.

837590 - PSOA Staffing Study

Originating Year:	2025	Project Type:	Public Safety	Department:	190 - Human Resources
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Vienne Choi

Project Description/Scope/Purpose

No later than January 1, 2026, the City shall issue a Request for Proposals for an independent third party to conduct a staffing analysis for the Sunnyvale Department of Public Safety. Prior to selection of a third-party consultant, representatives from the City and the Public Safety Officers Association shall meet with prospective consultants to evaluate the scope of services provided, discuss the proposed methodology, determine the timeline for project completion, and assess the feasibility of providing any required data. The City shall retain final authority for the selection of the consultant.

Project Evaluation and Analysis

This project is required in accordance with the PSOA 2025-2027 MOU. Not conducting this project will be in violation of the PSOA MOU, which is a legal binding contract.

Fiscal Impact

There are no ongoing operating impacts when project is complete.

834270 - DPS Headquarters - Records Unit Workstation Upgrade

Originating Year:	2019	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

This project will fund reconfiguration upgrades in the Records Unit in the Department of Public Safety (DPS) Headquarters. The budget includes the purchase and installation of new cubicles with sit/stand flexibility, the removal of existing cubicles, data drop installations as needed, electrical upgrades and overtime costs associated with this project.

Project Evaluation and Analysis

The Records Unit in DPS headquarters will remain untouched during the civic center project. The Records Unit has outgrown its space as it was originally designed. The Records Unit operates 24 hours a day, 7 days per week, with rotating staff sharing work stations and technology resources. Space is limited and work stations are out of date and not adaptable to the ergonomic needs of staff. Effective space planning will help to ensure optimal use of floor area. Additionally, upgrades to the area will help to maximize employee productivity, provide ergonomic work areas that can be adapted for shared use, and further enable a collaborative environment.

Fiscal Impact

This project is funded by the General Fund. Initial work has been completed, but other portions of the work are more complex and will be deferred until after the remodel of the Public Safety building. The deferred work is unfunded.

933940 - RMS Replacement in CAD Project

Originating Year:	2021	Project Type:	Public Safety	Department:	290 - Information Technology
Planned Completion Year:		Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

The Records Management System (RMS) implementation will follow a phased approach, beginning with a Phase I Fit-Gap Analysis to assess integration needs with the existing Computer-Aided Dispatch (CAD) system. The implementation will include configuring the RMS, migrating data from the legacy system, and ensuring seamless connectivity with the CAD for real-time data flow between dispatch, incident reports, and case management. User training, system testing, and post-implementation support will ensure smooth adoption and operational stability.

Licensing for the RMS will involve procurement of the necessary software licenses, vendor negotiations, and ongoing license management. The project will not include hardware upgrades or integration with non-public safety systems outside the defined scope.

Project Evaluation and Analysis

The RMS replacement will be evaluated through a formal purchasing process, with the Department of Public Safety defining the system's and functional requirements.

The primary goal of the RMS is to enable efficient management of public safety records, including incident reports, case files, and evidence, integrated with the new CAD system. The system must also comply with legal standards and support disaster recovery through synchronization with an alternate PSAP. This ensures that the RMS remains operational even if the primary PSAP is unavailable, as public safety functions cannot afford system failure.

Fiscal Impact

Record Management System (RMS) upgrade implementation and staff cost are \$10 million.

COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG)

THIS PAGE IS INTENTIONALLY BLANK

COMMUNITY DEVELOPMENT BLOCK GRANT (CDBG)

The Community Development Block Grant (CDBG) is one of two federal entitlement grants the City receives annually from the U.S. Department of Housing and Urban Development (HUD). The other is the HOME Investment Partnerships Program (HOME) grant, described in the Housing section. To remain eligible for these grants, the City must prepare an annual Action Plan describing the City's plans to spend the projected available CDBG funds in the coming fiscal year with a brief description of each planned project or program. CDBG funds may be used only for CDBG-eligible activities as listed in the CDBG statutes and regulations. Most of the funds must be used for "brick and mortar" projects such as housing rehabilitation, neighborhood improvements, or public facilities, including disabled access improvements, as well as economic development projects and job training programs. Certain types of capital projects may only be funded in CDBG-eligible areas as determined by HUD, as shown in the map in the Action Plan. Every five years the City must prepare a Consolidated Plan to maintain eligibility, outline specific goals and priority needs, and serve as a planning document, strategy, and application of funds. A new 2025-2030 Consolidated Plan will commence in FY 2025/26.

No more than 15% of the annual CDBG revenues may be used for public services for lower-income households (i.e., human services programs such as food and shelter, health care, counseling, etc.). In addition, up to 20% may be used for CDBG program administration, which includes CDBG-related Housing Division operations such as planning, compliance, fiscal activities, reviewing funding requests, preparing loan and grant documents, and loan servicing, as well as fair housing services, which may be provided through a contract.

CDBG-CV Funding (CARES Act). As a result of the COVID-19 pandemic, the Federal Government signed the Coronavirus Aid, Relief and Economic Security Act (CARES Act) in 2020. The City received approximately \$1.7 million in CDBG-CV funding, which has been allocated towards rent relief, COVID-19 testing and administration, financial assistance for persons with disabilities, portable showers, laundry, restrooms, and case management for the unhoused. The City has spent nearly all remaining CDBG-CV funds, with the final amount of \$150,000 to be drawn in FY 2025/26 to support the Sunnyvale Community Services Food Program.

MAJOR CDBG PROJECTS

WorkFirst Sunnyvale Program, Community-Based Development Organization Activity.

This program provides job-readiness and job search skills training, job placement assistance, and related employment supportive services, such as assistance in obtaining affordable housing, transportation to work, vocational education, required work gear, and career counseling. The program serves Sunnyvale clients who are currently homeless, transitioning out of homelessness, or at imminent risk of homelessness. The funding is provided as a grant to Sunnyvale Community Services, a certified vendor selected through a competitive process, and the program is implemented in coordination with Downtown Streets Team (subcontractor) and the broader community.

Outside Group Funding Support (CDBG). This project provides public services grants to local non-profit agencies that provide human services for Sunnyvale clients. The grantees are selected through a competitive process held every other year. Grants are awarded for two years, with the second year's grant contingent on funding availability and the

grantee's successful completion of the first year's grant requirements. Grant proposals are screened by staff, recommended for funding by the Housing and Human Service Commission, and approved by Council as part of the annual Action Plan approval and City budget adoption. The amount allocated to this project is adjusted annually. It is limited by CDBG regulations to no more than 15% of the fiscal year's CDBG grant plus 15% of the CDBG program income received in the current fiscal year, if applicable. The CDBG allocation is approximately \$156,450 for FY 2025/26. City General Funds are also used to further support public service grantees, and \$135,000 has been allocated each year in the General Fund's long-term financial plan for this purpose. The City supports ten non-profits through these two public service funding sources.

CDBG Housing Rehabilitation Revolving Loan Fund. This project includes funding for the Housing Rehabilitation Loan program, which provides low-interest loans for rehabilitating housing owned or occupied by lower-income households. Owner-occupied housing rehabilitation loans are provided on a first-come, first-served basis for single-family and/or mobile home rehabilitation projects. Loans may also be provided for rehabilitating rental housing occupied by and affordable to lower-income households. The CDBG Revolving Loan Fund funds this project. When these CDBG loans are repaid in full or part, some or all of the payments are deposited into the Revolving Loan Fund to be re-used for new housing rehabilitation loans. If these annual loan payments exceed the projected demand for rehabilitation loans and related program delivery costs for the coming year, the excess revenues can be maintained as general CDBG "Program Income" and used for other CDBG-eligible purposes in the coming year. Staff projects the level of demand for the loan program and program income receipts as part of the annual Action Plan process completed in the spring of each year.

Home Access, Roof, Paint, Emergency Repair, and Energy Efficiency. This project funds the Home Improvement Program, which provides small grants for minor improvements to homes owned and occupied by lower-income households. Grants may fund disabled access retrofits and improvements, wheelchair lifts or ramps, roof replacement or repair, exterior painting, emergency repairs, and/or energy efficiency retrofits to income-eligible homeowners of mobile homes and/or single-family homes. Disabled tenants may also apply for the Home Access grant, with the landlord's approval of the proposed improvements.

803501 - CDBG Housing Rehabilitation Revolving Loan Fund

Originating Year:	2017	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

The Community Development Strategy directed the City to concentrate resources on stimulating substantial rehabilitation and modernization of single family homes and multi-family units. This project provides rehabilitation loans also to existing rental properties that serve households at 30% to 80% of Area Median Income, with rents limited to 30% of gross household income. Substantial rehabilitation includes repairs to the exterior of the structure, the major component systems and the interior functional components. The Community Development Block Grant Housing Rehabilitation Revolving Loan Fund (RLF) allows Community Development Block Grant (CDBG) rehabilitation loans to "revolve". Program income earned from repayments of existing loans are disbursed as new loans.

Project Evaluation and Analysis

This project includes rehabilitation of single family homes owned by low-income residents and multi-family properties occupied by low-income tenants. This program provides low interest loans to allow residents to upkeep their homes and remain affordable in the community. All loans are funded through CDBG and managed by the Sr. Housing Rehab Specialist. Loan Fund changes annually due to the revolving nature - loan payments/payback, City adding new CDBG funds, etc.

Fiscal Impact

The U.S. Department of Housing and Urban Development's (HUD) lead based paint requirements may increase the cost of each rehabilitation project. This may result in fewer projects being completed, given the limited funding available. Project expenditures are funded by program income received during the program year and prior years.

812701 - Home Access, Paint, Emergency Repair, and Energy-Efficiency

Originating Year:	2017	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project allocates Community Development Block Grant (CDBG) funds as grants and loans that will provide assistance to approximately 10 low-income households annually. Each applicant is approved based on their financial qualification and managed by the Sr. Housing Rehab Specialist in the Housing Division. These funds are set aside annually out of the City's CDBG allocation and are outlined the Annual Action Plan.

Project Evaluation and Analysis

This project addresses the priorities and goals described in the Consolidated Plan, specifically, Affordable Housing: Improve housing accessibility, housing conditions, lead-based paint hazard reduction, energy efficiency, and affordability for lower-income households. Each applicant is thoroughly reviewed for income and other qualifications before grants and loans are awarded. All funds are allocated and issued in accordance with U.S. Department of Housing and Urban Development (HUD) requirements.

Fiscal Impact

This project is contingent on annual U.S. Department of Housing and Urban Development (HUD) Grant Appropriations. This use of CDBG funds is consistent with federal regulations governing use of that fund. Funds will be used for the following activities:

- 1) Home Access - provides grants of up to \$6,500 to retrofit and maintain units occupied by disabled persons;
- 2) Paint Program - provides assistance to homeowners to paint the exterior of their homes;
- 3) Emergency Repair - provides grants of up to \$2,500 for life-threatening building hazards, such as electrical system failures, unsound structures, plumbing system failures, and/or other conditions which could result in an explosion or unsafe situation in the immediate future;
- 4) Energy Efficiency Program - provides dollar for dollar matching grants up to \$5,000 for energy efficiency retrofits.

827550 - Outside Group Funding Support [CDBG]

Originating Year:	2017	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Outside Group Funding	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project provides the Community Development Block Grant (CDBG) fund allocation to support outside agencies that provide community human service needs. The agencies and the annual funding amount awarded to each agency are allocated by Council each year. All biennial awards are offered in the form of a grant.

Project Evaluation and Analysis

As a general policy, and based on CDBG funding availability, Council may allocate up to 15% of the grant funds to outside agencies plus a small percentage of any program income. This project addresses the priorities and goals described in the City's Consolidated Plan. Grantees are awarded on a two year cycle and the grants are identified in the Annual Action Plan.

Fiscal Impact

This project is contingent on annual Department of Housing and Urban Development (HUD) Grant Appropriations and is updated annually based on the funding allocation received by the City. Use of these funds is consistent with federal regulations governing use of CDBG funds. In addition, the City supplements these CDBG funds for Outside Group Funding Support with a General Fund allocation.

829560 - Sunnyvale Workforce Development Program-DST

Originating Year:	2012	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project allocates Community Development Block Grant (CDBG) funds to Sunnyvale Community Services, a non-profit corporation. Funds will be used to implement a Sunnyvale Workforce Development Program in partnership with Downtown Streets Team (DST), a non-profit based in Palo Alto. This program will provide job readiness training, job skills training, and job placement for at least fifty low-income individuals who are homeless, recently homeless, or at risk of homelessness in Sunnyvale.

Sunnyvale Community Services has been certified as a Community-Based Development Organization (CBDO) which allows it to apply for CDBG funds for programs that are not subject to the CDBG 15% public services cap. These activities include programs that are designed to increase economic opportunities through job training and placement and other employment support services, including, but not limited to, temporary housing assistance, child care, transportation, and supportive services. This Workforce Development Program qualifies for CDBG funding under this category of activities.

Project Evaluation and Analysis

This program addresses the Consolidated Plan objective to help people who are currently homeless or at imminent risk of homelessness to obtain employment or other sources of income and adequate support services/networks to obtain housing and achieve stability. Both agencies have a very strong track record and strong organizational capacity, and the program addresses a priority community need.

Fiscal Impact

This project is contingent on U.S. Department of Housing and Urban Development (HUD) annual grant appropriations. Use of these funds is consistent with federal regulations governing use of CDBG funds. Funds for this program are used to support homeless Sunnyvale residents obtain job training, employment placement services, and case management through two local nonprofit agencies. Funds go towards program operation and administration, in accordance with HUD regulations and the City's funding contract, awarded on an annual basis.

836670 - Carroll Street Inn Rehabilitation (CDBG)

Originating Year:	2023	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Matt Hazel

Project Description/Scope/Purpose

The Carroll St. Inn Rehabilitation and Energy Efficiency project will assist an affordable supportive housing community in becoming more energy efficient by replacing its central gas hot water heaters with electric hot water heaters and replacing its hydronic heating system, powered by gas, with Packaged Terminal Air Conditioners, which will be powered by electricity. Carroll St. Inn is fully occupied serving households with special needs and this project supports the community by preserving/upgrading the building to ensure habitability for the long-term. Loan documents were signed in Fall 2024 and the loan is being distributed as a reimbursement based loan. Loan funds started to be awarded in December 2024 and will continue through early 2025.

Project Evaluation and Analysis

\$490,000 in CDBG funding for 23/24 has been allocated for this project for rehabilitation of an existing affordable housing development in Sunnyvale. The project will comply with all federal funding requirements and will be managed by the Housing Division in the Community Development Department.

Fiscal Impact

\$490,000 in CDBG funding for 23/24 has been allocated for this project. There is no general fund impact.

Funding Sources

\$490,000 in CDBG funding for 23/24 has been allocated for this project.

Plans and Goals

837620 - Upwards Care Boost Program

Originating Year:	2025	Project Type:	CDBG	Department:	150 - Community Development
Planned Completion Year:	FY 2026	Category:	Outside Group Funding	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

This program provides support to microenterprise childcare facilities by providing coaching and digital tools to optimize operations allowing efficient management and expanding access and affordability to working families. During the outreach process for the five-year strategic Consolidated Plan, residents identified affordable childcare as a primary need.

Project Evaluation and Analysis

The project is aligned with the Housing Element of the General Plan, including goals:

- Council Policy 5.1.3 Human Services- to provide supplemental human services, which include but are not limited to emergency services, senior services, disabled services, family services, and youth services.
- HE 5.2 Access to Opportunity- to Improve access to opportunity in low and moderate resource areas through financial investments, provision of public facilities and services, and encouragement of private retail, service, and employment opportunities.

Fiscal Impact

The funding allocations will make use of HUD CDBG grant funds and related Program Income for key areas consistent with the grant program regulations. Expenditure of these federal funds is necessary to meet timeliness requirements in place by HUD.

Funding Sources

HUD CDBG grant

OUTSIDE GROUP FUNDING

THIS PAGE IS INTENTIONALLY BLANK

OUTSIDE GROUP FUNDING

The City has funded programs for lower-income and special needs residents for many years through the Human Services Grant program within the Outside Group Funding project category in addition to other community needs. The primary funding source for Human Services Grants is the Community Development Block Grant (CDBG), administered by the Housing Division and discussed in the CDBG project category separately in detail. For many years, the City has supplemented the CDBG funding for the human services program with varying levels of resources from the General Fund.

Outside groups seeking funding for purposes other than human services may request Outside Group Funding by submitting a written request directly to the City department where their services would reside. Staff considers these requests in the context of their operating budgets and currently funded service levels. Staff then makes one of three recommendations to Council: 1) fund the request within the existing budget by reducing or eliminating another service; 2) fund the request using General Fund monies; or 3) do not recommend funding the request.

MAJOR OUTSIDE GROUP FUNDING PROJECTS

Outside Group Funding Support (GF). The City Council set aside \$135,000 annually for Human Services grants across the twenty-year financial plan, but the amount may be adjusted during the budget process. The Housing Division solicits Human Services grant proposals through a competitive Request for Proposals process every other year, and the grants are awarded on a two-year basis, contingent on successful performance during the first year. This project will supplement the \$156,450 in CDBG funding in FY 2025/26.

Downtown Association. This project supports the Sunnyvale Downtown Association with an annual allocation of \$100,000 through FY 2028/29, and \$40,000 thereafter. The funding supplements the Business Improvement District revenue and provides special event and enhanced marketing efforts for the downtown area.

803700 - Leadership Sunnyvale [GF]

Originating Year:	2010	Project Type:	Outside Group Funding	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Outside Group Funding	Project Manager:	Michelle Zahraie

Project Description/Scope/Purpose

Leadership Sunnyvale provides a nine-month intensive public affairs and leadership training program that allows participants to expand their knowledge of issues affecting the community and to enhance the skills needed to become effectively involved in civic and community affairs. The program provides public affairs seminars and leadership skills workshops.

Project Evaluation and Analysis

Leadership Sunnyvale seeks to develop an expanding base of knowledgeable citizens and civic leaders who are well-equipped to serve the City on boards and commissions, as effective participants and leaders of community organizations. The City has provided General Fund support for Leadership Sunnyvale in accordance with the City's Outside Group Funding guidelines. The leadership training is consistent with the City's Community Vision Goals and Policies.

Fiscal Impact

This project is funded \$6,000 annually out of General Fund. There are no other costs associated with this project.

There is an in-kind services agreement between the City and SVL (Silicon Valley Leadership). Fiscal obligations: As available, CITY shall provide SVL with appropriate staff for approximately 25-30 hours for online or in person presentations on City-related business. SVL, including current program participants, alumni, staff and/or board members, shall provide, at no cost to the CITY, a minimum of fifty (50) volunteer hours per year to the City. Volunteer activities may include annual City events such as Hands on the Arts and State of the City, as well as community organizations such as Sunnyvale Community Services. SVL shall train two City staff members at a rate of \$800 each to the extent that the City provides staff members to attend.

819720 - Outside Group Funding Support [GF]

Originating Year:	2017	Project Type:	Outside Group Funding	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Outside Group Funding	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project provides for the total long-term General Fund allocation to support outside agencies that provide services to address community needs. This funding is specifically designated for human services agencies and is intended to supplement Community Development Block Grant (CDBG) funds allocated to support human services agencies. The agencies, and the annual funding amount awarded to each agency, are allocated by Council every two years, with annual adjustments based on the Priority Needs Setting Hearing every other November. A formal Request for Proposal (RFP) is released for these funds along with the City's CDBG RFP and funds are awarded on a two year contract due to the smaller size of these grants. These funds fill a critical gap for smaller nonprofits without experience in federal funds, or allow them to gain experience with smaller size grants that may not be eligible for federal funding. In addition, this GF supplement helps backfill federal funds which are not increasing over time.

Project Evaluation and Analysis

This project provides up to \$200,000 annually in support of outside agencies that provide community support. Every two years, the Housing and Human Services Commission (HHSC) holds a "Biennial Review of Priority Needs for Human Services" and Recommendation to City Council would continue to provide an opportunity to adjust the prioritization of these funds and allow for public input regarding the allocation of available CDBG funds. During this review, the HHSC may request additional funding from the Council; should additional funding be awarded, the project budget will be updated. Grants are capped at \$25,000 and are overseen by the Housing Division.

Fiscal Impact

General Fund support for outside group funding will be allocated every two years to specific projects as identified in the City's HUD Annual Action Plan. These funds supplement Outside Group Funding (OGF) CDBG funds for human services, which are part of the City's annual allocation of CDBG funding. The demand for these grants is always significantly more than the funding availability. In 2024, during Priority Needs Setting on Nov. 12 (24-1133), due to ongoing inflationary costs and increases in agencies' needs, the Council approved increasing these grants to \$200,000 in FY 25/26 and FY 26/27.

829620 - Downtown Association

Originating Year:	2013	Project Type:	Outside Group Funding	Department:	130 - Office of City Manager
Planned Completion Year:	2028/29	Category:	Special	Project Manager:	Christine Velasquez

Project Description/Scope/Purpose

The purpose of this project is to support promotional special efforts such as special events and an updated visitors guide. As per City Council direction with (Budget Supplement #8) budget adoption on June 23, 2015, this project provides funding for five years in support of the Sunnyvale Downtown Association. In FY 2019/20, an extension was approved for an additional 5 years. A new 5-year cycle begins FY 2024/25, with an approved increase in funding through FY 2028/29.

Project Evaluation and Analysis

The Sunnyvale Downtown Association requested that the City provide matching funds to augment the revenue they receive from Business Improvement District funding. City Council adopted the budget supplement to support Downtown businesses by providing funding to continue Downtown Sunnyvale events, enhance marketing that includes a website and social media tools along with other marketing materials. This funding continues to support attraction of residents and visitors to Downtown Sunnyvale.

Fiscal Impact

This project was initially funded at \$30,000 and increased to \$40,000 annually in FY 2019/20 through FY 2023/24. The project budget has been extended until FY 2028/29 at \$60,000 annually and will continue to be funded by the General Fund.

830630 - Dispute Resolution Services

Originating Year:	2014	Project Type:	Outside Group Funding	Department:	150 - Community Development
Planned Completion Year:	2027/28	Category:	Outside Group Funding	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

This project provides one-time funding for dispute resolution and mediation services by an entity qualified to provide such services. The focus of this service is on tenant/landlord disputes, but other types of community disputes would also be accommodated to the extent possible. Sunnyvale has a long tradition of supporting tenant/landlord mediation and dispute resolution services to help local renters and landlords, as well as other community members, resolve disputes in an amicable manner.

Project Evaluation and Analysis

This project provides an increased level of service to the community by providing dispute resolution services that are frequently requested by residents, property owners and other related agencies. The City has funded an outside agency to provide these services to residents for five years prior to FY 23/24. The contract for five additional years was approved in 23/24 of funding at a rate of \$50,000 per year to continue and expand the service due to increase in need and additional housing support the agency provides the City. This allows Sunnyvale residents to access dispute resolution services for landlord/tenant mediation issues and mobile home park mediation issues.

Fiscal Impact

The contract for five additional years was approved in 23/24 for \$50,000 annually in GF.

836710 - Cyber Security Improvements

Originating Year:	2023	Project Type:	Outside Group Funding	Department:	290 - Information Technology
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

The UASI Grant is a Federally Funded Cyber Security Grant administered by The Department of Homeland Security through the City and County of San Francisco, Bay Area Urban Areas Security Initiative (UASI). The grant funds the purchase of software to improve cyber security.

Project Evaluation and Analysis

The grant audit will confirm the equipment purchased is for the purpose of Cyber Security and confirm the purchase.

Fiscal Impact

Initial costs will be reimbursed by UASI. The ongoing costs for the following items have been requested in Program 15201 Operating Budget beginning in FY24/25. If additional ongoing costs are identified they will be requested as ongoing costs within the project.
Maintenance and Support - \$14,000.00
Logs - \$9,660.00

PARKS AND RECREATION

THIS PAGE IS INTENTIONALLY BLANK

PARKS AND RECREATION

Parks and Recreation projects are funded mainly by Park Dedication Fees, which may be used to develop new or rehabilitate existing neighborhood parks, community parks, or recreational facilities. These projects' operating costs and/or savings are incorporated into the General Fund or the Golf and Tennis Operations Fund.

The FY 2025/26 Projects Budget reflects an update to several park rehabilitation and enhancement projects to reflect the latest labor and construction costs and to secure the optimal level of recreational use and sustainability of parks in the long-term plan. Approximately \$225 million has been included for Park Dedication Fee-funded park enhancement projects. Several of the major projects are briefly summarized below.

MAJOR PARKS AND RECREATION PROJECTS

Lakewood Park Renovation and Enhancements. Through FY 2024/25, over \$16.3 million is planned to replace features that are over fifty years old. Updates include more drought-tolerant plant species, more efficient landscaping and irrigation, energy-efficient lighting, and ADA-related improvements. Construction is anticipated to begin in fall 2025 with completion in winter 2027.

Future Park Enhancement Projects. The City also plans to replace and renovate all its parks over the twenty-year period. Projects are spaced at intervals over the long term based on park age and project workload considerations. Renovations include replacing or rehabilitating major features, landscape upgrades, and turf athletic fields where appropriate. The actual scope and costs may vary upon receipt of community feedback.

Community Center Grounds Renovation and Enhancement. This project will provide a major renovation of the facility, originally built in 1973, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities, such as electricity. Public input meetings will be held during the design phase to gather feedback from neighbors, park patrons, and other stakeholders. Based on community input, the scope may include a new restroom; replacement of pathway and parking lot lighting systems with energy efficient fixtures; replacement of the ornamental pond; construction of playground and picnic areas; replacement of portions of landscaped and ornamental grass areas and the associated irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; replacement of portions of concrete pathways; and additional work required to connect interlinking areas. The project is currently in the construction phase with anticipated completion in FY 2025/26.

Golf Course Irrigation System Replacement. A preliminary design study of the golf course irrigation systems identified components in the Sunnyvale and Sunken Garden Golf Courses that need replacing or renovating. The components identified were irrigation controllers, flow meters, pumps, wiring, valves, and piping. This project schedules the major replacement/renovation starting in FY 2023/24 and places it on a regular replacement schedule to maintain existing service levels.

Park Repairs and Renovation. Infrastructure repairs and renovations for existing buildings continue throughout the City. Specific work at these locations will be evaluated and prioritized according to applicable codes, safety issues, and relationships to other rehabilitation projects that may trigger building work, such as playground renovations or ADA upgrades to restrooms. This budget includes Washington Park, Victory Village, De Anza, Encinal Parks, and Baylands Park funding. The rehabilitation of various park irrigation and pump systems, as well as funds for the replacement of picnic tables, benches, bollards, bleachers, backstops, fencing, barbecues, pathway and parking lot lights/poles, drinking fountains, trash containers, and retaining walls are part of this budget.

Playground Equipment Replacement. The budget incorporates plans to replace the playground equipment at nine City parks. In addition, equipment replacement at other sites, such as LED lighting, new drinking fountains, barbecues, and fencing, is included in the scope of park renovation and enhancement projects. Several locations are currently under design. Replacement priorities are determined by an annual survey of all park playgrounds by staff members who are Certified Playground Safety Inspectors, and the replacement schedule is coordinated with major park rehabilitation projects.

Las Palmas Tennis Court Lighting. This new project will modernize and upgrade the lighting system of the tennis courts at the Las Palmas Tennis Center. The planned lighting replacement is expected to be cost-efficient, leading to potential energy savings. The project is anticipated to be completed in FY 2025/26.

Corn Palace Park Development. This project is for designing and constructing a new two-acre public park at the Corn Palace development site (1142 Dahlia Court). This project is expected to be completed in FY 2024/25.

Grant-Funded Parks and Recreation Projects. Parks and Recreation also has several other projects funded through grant awards. These projects managed by the Recreation Services division are to provide specific programs to promote areas such as healthy living, eating and fitness; assist with social connections for older adults and other residents at one or two mobile home parks; and seek new partnerships with agencies that serve the LGBTQ+ older adults community to deliver evidence-based programs to produce positive changes for participants.

VSI Replacement. The City has outgrown its current recreation management software, which no longer meets contemporary standards for usability for both front-end public and back-end users. Implementing a replacement recreation management system, which will include the ability for recreation program registration and payment, and facility rental management processing, is programmed for FY 2025/26.

Fun-on-the-Run (FOTR). This project includes one-time Fun-on-the-Run vehicle interior customizations to install lockable drawers and appropriate storage, purchase of equipment such as large games tables, games, and activity supplies, and installation of exterior wrap after the replacement vehicle is purchased.

818550 - Park Buildings - Rehabilitation

Originating Year:	1997	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

This project provides for infrastructure repairs and renovations to existing park buildings. It includes repair/replacement of flooring, window coverings, fixtures, heating, ventilation, and air conditioning system (HVAC), roofs, and other work required to keep existing structures in a safe, usable, and attractive condition. These projects are evaluated and prioritized according to applicable codes, safety issues, and relationships to other rehabilitation projects that may trigger work to the buildings, such as playground renovations, Americans with Disabilities Act (ADA) upgrades to restrooms, or to accommodate recreation programming. Current funds are for the design and construction of building renovations at Braly Park and replacement of Fairwood Park restroom buildings. Fairwood Park restrooms will be prioritized during construction as those buildings are in worse condition. Funds in FY 2025/26, FY 2026/27, FY 2029/30 and FY 2030/31 are for the design and construction of HVAC and roofs at various parks buildings. Scope of work and actual locations to be confirmed in future years based on condition.	
Project Evaluation and Analysis All park buildings were included in a building assessment completed in 2000 when all components were evaluated and assigned replacement dates. Since then, facilities staff has continued to renovate and repair park buildings and components as needed. Each year all structures are re-evaluated, and project prioritization and scope of work may change depending upon current building conditions. Delays in these projects may result in higher operational costs due to higher frequency of repairs and/or higher capital costs for emergency replacement. Staff estimates are based on costs from previous renovations and include program coordination and contingencies.	
Fiscal Impact By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

818600 - Senior Center Buildings - Rehabilitation

Originating Year:	1997	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for upgrades to building systems and ongoing heating, ventilation, and air conditioning (HVAC), electrical, and roof rehabilitation of the Senior Center to maintain its operational effectiveness in future years. Funds in FY 2023/24 and FY 2024/25 are for design and construction of HVAC component replacement, solar panel replacement, fire safety code required upgrades, and flat roof surface replacement. Additional funds were added to FY 2023/24 for the Facility team to replace the Fire Alarm System. the design contract was awarded in FY 2024/25, and construction will follow.

Project Evaluation and Analysis

The existing building requires upgrade and replacement of electrical and mechanical components to remain operationally effective. Delays in these projects may result in higher operational costs due to higher frequency of repairs and/or higher capital costs for emergency replacement. Staff estimates are based on costs from previous renovations and include program coordination and contingencies.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

820140 - Computer/Radio Controlled Landscape Median Irrigation

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project provides for a study and the replacement of computer radio-controlled irrigation equipment on City medians and roadside landscape areas throughout the City. In FY 2021/22, the scope expanded to include replacement of radio-controlled irrigation equipment in parks as well. The completed study of all the satellite controllers and associated hardware identified an immediate need to replace 48 controllers because replacement parts are no longer manufactured and are obsolete.

As a result of the study, 157 controllers have been replaced in FY 2021/22, and irrigation controllers at Baylands Park were replaced with funds carried over in FY 2022/23.

Sites missing flow sensors and master valves will have these components installed in the future. Controller enclosures that are no longer functioning will also be replaced at the same time. Design for this work is scheduled for FY 2030/31 and FY 2031/32 with construction in FY 2032/33.

Project Evaluation and Analysis

The manufacturer has discontinued the models currently in use and is no longer providing support for them. The controllers are failing and the repair costs for both labor and materials have increased. In some cases, the units are not repairable and have been placed offline. Repair and replacement of equipment will save water, reduce the need for emergency repairs, and improve the reliability of the system. The replacement schedule will be evaluated and extended as necessary.

Fiscal Impact

This project is funded by the General Fund and Park Dedication Funds.

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

820240 - Park Tennis/Basketball Court Reconstruction

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Connie Phan

Project Description/Scope/Purpose

This project provides for the reconstruction of 41 City-owned tennis and basketball courts and does not include the 16 tennis courts at the Sunnyvale Tennis Center, which are included in a separate project. Based on historical data, usage, and current surveys, major reconstruction and repair for each court is required approximately every 30 years. Reconstruction will include rehabilitation via milling, crack sealing, overlay with asphalt resurfacing, fencing, and hardware, as appropriate.

Relocation of basketball courts at Orchard Gardens Park will be revisited under 830400 Orchard Gardens Park Renovation and Enhancement as allowed by San Francisco Public Utilities Commission (SFPUC). FY 2024/25 funds are for six tennis courts at Sunnyvale Middle School.

Funds in FY 2025/26 will be used to restripe up to three existing basketball and/or tennis courts to allow for pickleball. LRS will do community outreach to determine locations.

FY 2031/32 and FY 2032/33 are for design and reconstruction of one tennis court and one half basketball court at Seven Seas Park. Funds in FY 2036/37 and FY 2037/38 are for design and reconstruction of one half basketball court at Wiser Park.

Project Evaluation and Analysis

This project is necessary to maintain existing recreational infrastructure. Alternatives to funding this project would be to allow the courts to deteriorate (which would result in hazardous and unusable courts) or to reduce costs by eliminating a portion of the project's scope (hardware, resurfacing, fencing).

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

820270 - Playground Equipment Replacement

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for the replacement of parks playground equipment, and related site work. Replacement priorities are determined by an annual survey of all park playgrounds by staff that are Certified Playground Safety Inspectors, and the replacement schedule is coordinated with other major park renovation projects.

Construction for the following parks is anticipated in FY 2025/26: Washington (playground), Victory Village (playground), Encinal (elementary-age playground only), De Anza (playground), Ponderosa (Tot lot), Baylands Park (Tot Lot) and Greenwood Manor (playground). Columbia Park/School (playground) and Cannery Park (playground) are scheduled for design in FY 2025/26 and construction in FY 2026/27. The replacement of equipment at other sites is included in the scope of park renovation/enhancement projects.

The replacement schedule for resilient surfacing funds begins in FY 2029/30. The identified parks for replacement are as follows: FY 2029/30 Seven Seas Park (10 years); FY 2034/35 Washington Park (15 years); FY 2035/36 Fair Oaks Park (16 years); and FY 2035/36 De Anza Park (16 years).

Project Evaluation and Analysis

This project maintains existing service levels by replacing worn equipment. The alternative to replacement is to increase or decrease the replacement cycle to result in increased or decreased costs. These options would also result in either improved or diminished quality of playground equipment available for play.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

820280 - Park Furniture and Fixtures Replacement

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

This project provides for the replacement of picnic tables, benches, bollards, bleachers, backstops, fencing, barbecues, pathway and parking lot lights/poles, drinking fountains, trash containers, retaining walls, and other fixtures. These fixtures require replacement as needed to address wear and tear, and other conditions of use. Replacement need and schedule are determined by annual staff surveys. Cost estimates are based upon recent years' costs to replace similar fixtures and structures.

Project Evaluation and Analysis

Replacement of these furnishings and fixtures with the associated funding is key to meeting the goals, objectives, and approved service levels of the Neighborhood Parks and Open Space Management program.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Project funds will be used for the purchase of equipment and staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

As part of Budget Mod 13 (RTC 24-0291), \$27,939 from Project 820280 - Park Furniture and Fixtures Replacement was reduced and added to 831880 - Preschool Outdoor Play Area.

820361 - Golf Course Tee Grounds Renewal

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

This project provides for the replacement of tee grounds at the Sunnyvale Golf Course and Sunken Gardens Golf Course. Tee ground replacements are planned every 15 years based upon expected life cycles as provided by the American Society of Golf Course Architects. Work performed in this project will maintain Council-approved service levels for safe, attractive, and usable golf courses. Funds budgeted in FY 2023/24 and FY 2024/25 are for the design and construction of Sunnyvale and Sunken Gardens Golf Courses. The cost estimates are based on comparable projects currently being completed by local golf course contractors, and the recently completed project at Sunnyvale Golf Course.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure that is critical to golf course operations and the overall play of both courses.

While the completion of these projects will help maintain the level of service for our customers, staff does not anticipate that this project will increase future revenues. Depending on the timing and phasing of the projects there will be some impact on play, and there may be a time period when reduced green fees are recommended because of the project impacts.

Project scope and costs are subject to change pending the results of the proposed new Golf Program Master Plan Capital Improvement Project (CIP). Currently, this project is on hold and will be revisited based on the results of the proposed Golf Program Master Plan CIP with an anticipated completion date FY 2025/26. The results will help determine which projects should move forward and the priority order. A conservative timeline would be projects that are approved would resume in FY 2028/29.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

825660 - Golf Course Greens Renewal

Originating Year:	1999	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

This project provides for the renovation and rebuilding of 28 greens and adjacent sand bunkers at Sunnyvale and Sunken Gardens Golf Courses and related irrigation modifications. Funds budgeted in FY 2023/24 and FY 2024/25 are for design and construction of all greens and sand bunkers at both courses, including the practice putting greens. The design phase for this project has been postponed to FY2028/29 and is contingent on the completion of the Golf Program Master Plan Capital Improvement Project (CIP), set to complete FY 2025/26. Green replacements are planned every 30 years and cost estimates are based on current golf course contractor estimates, adjusted for inflation.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure. The quality of greens at the golf course must be maintained to optimize rounds of golf played.

Project scope and costs are subject to change pending the results of the proposed new Golf Program Master Plan Capital Improvement Project (CIP). Currently, this project is on hold and will be revisited based on the results of the proposed Golf Program Master Plan CIP. The results will help determine which projects should move forward and the priority order. A conservative timeline would be projects that are approved would resume in FY 2028/29.

825850 - Swim Pools Infrastructure

Originating Year:	2006	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for the replacement and/or repair of pool infrastructure and related components as necessary, based upon annual inspections by City staff.

This project's scope includes equipment replacement for diving boards, pumps and other miscellaneous items, and also includes renovations such as pool relining, pool deck resurfacing, and pool boiler heater replacement for the joint use agreement pool at Columbia Middle School and the joint use agreement pool at Sunnyvale Middle School.

Higher than average funding amounts are included in FY 2026/27, FY 2027/28, and FY 2029/30, to accommodate the replacement of larger items such as pool liners, decks, electrical, and filtration systems at the various pools. Funds in FY 2022/23, are for the boilers, electrical system, and filtration systems at Columbia Middle School. The design of the project nearing completion. The Construction anticipated start date is FY 2025/26. The pool infrastructure renovations (deck, relining, boilers, electrical system, and filtration system) at Sunnyvale Middle School are anticipated to occur in FY 2024/25 and FY 2026/27 and will be reassessed in the FY 2024/25 project budget cycle. The renovations at Sunnyvale Middle School are also contingent upon current negotiations with the Sunnyvale School District (SSD) about continued usage of the pool by the City. Funds in FY 2027/28, are for pool crack repair and relining Columbia Pool. Funds in off-project years are for routine renovation and equipment replacement. A condition assessment was conducted in FY 2018/19 for the swimming pool at Sunnyvale Middle School outlining the required repair work and estimate.

Per agreement with the SSD, the District pays for 50% of all maintenance and equipment replacement for Columbia Middle School Pool. The reimbursement from SSD is reflected in the revenues.

Project Evaluation and Analysis

Regular capital replacement, and routine upgrades to pool infrastructure components will allow the pools to operate in a safe and healthy manner.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget. There are also some offsetting contributions from the Sunnyvale School District. Work for this project requires approval from the school district to move forward.

827160 - Sunnyvale Tennis Center Court Rehabilitation

Originating Year:	2007	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

The Sunnyvale Municipal Tennis Center has 16 tennis courts with a convenient tennis pro-shop on-site that is open seven days a week. This project provides for epoxy sealing and line painting of sixteen courts at the Sunnyvale Tennis Center every five years. The project was awarded in FY 2024/25, and work is scheduled to commence April 2025.

Project Evaluation and Analysis

This project protects existing service levels, facilities, and revenue for the City. Maintaining the condition of the tennis court surfaces will enable the contract operator to continue offering recreational play, lessons, and competition at the Sunnyvale Tennis Center and will maintain revenue for the City (per license agreement), which totals approximately \$120,000 annually.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

828290 - Parks Parking Lot Rehabilitation

Originating Year:	2010	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for the renovation and replacement of existing storm drains in all City parks parking lots. It replaces dated storm drain piping with upgraded pipe that should mitigate problems such as tree roots. After replacing storm drain piping, parking lots will be resurfaced with an asphalt overlay. Paving work will be performed on a 20-year cycle. Replacement priorities are determined by an extensive survey and review of the condition of all park parking lots. Staff updates the survey each year and adjusts planning based on actual conditions of the drains and the lots. In addition, the renovation schedule is coordinated with other major park renovation projects.

The anticipated construction costs vary by park due to the size and condition of the parking lots. Funds in FY 2035/36 and FY 2036/37 are for condition assessment, design, and partial construction cost, respectively, for Seven Seas, Ponderosa, De Anza, Murphy, Washington, Raynor, and Las Palmas Parks. The number of the parks and the anticipated construction cost will be evaluated again after FY 2031/32.

Project Evaluation and Analysis

Without renovation and replacement, the parking lot surfacing and drainage systems deteriorate, eventually becoming unusable, prone to flooding, and potentially hazardous. In addition, as asphalt/concrete ages it fragments, causing debris and litter. Postponement of the project could result in higher costs due to continued deterioration.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

828400 - Golf Buildings Renovations

Originating Year:	2010	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for the repair/renovation of existing golf building components at both Sunnyvale and Sunken Gardens golf courses to bring them into compliance with current building codes and Americans with Disabilities Act (ADA) requirements. Components may include flooring, electrical/lighting systems (including practice range), plumbing, interior/exterior painting, stairs and ramp ways, and cabinetry based on condition assessment. Funding in FY 2034/35 to be programmed for lifecycle replacement of heating, ventilation, and air conditioning (HVAC) systems for both facilities.

Project Evaluation and Analysis

This project supports Council service-level measures for safety, attractiveness, and usability in the Golf Course Operations program and provides funding to prevent hazardous conditions or safety concerns.

Project scope and costs are subject to change pending the results of the proposed new Golf Program Master Plan Capital Improvement Project (CIP). Currently, this project is on hold and will be revisited based on the results of the proposed Golf Program Master Plan CIP which is anticipated to be completed in FY 2025/26. The results will help determine which projects should move forward and the priority order. A conservative timeline would be projects that are approved would resume in FY 2028/29.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

829150 - Swimming Pool Buildings Infrastructure

Originating Year:	2012	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for infrastructure renovation and repair of buildings at two community center pools: the City-owned Washington Pool and the Sunnyvale School District owned pool at Columbia Middle School. Facilities at Washington include the planned Washington swimming center buildings. Facilities at Columbia include the office and pool equipment/park maintenance buildings. Funding every three years for equipment is included on the replacement schedule, which includes flooring, paint, restroom fixtures, lighting, plumbing, electrical, and roofing. Specific dollar amounts identified in this project are based on the current replacement schedule. Over time, some basic infrastructure items deteriorate from use or natural causes (weather, earth movement, etc.). This project will replace and/or repair these items as necessary, including shower valve replacement and plumbing work, Americans with Disabilities Act (ADA) equipment replacement, shower tile and grout work, restroom partitions replacement, electrical work, exhaust fan replacement, and interior painting.

The funds are for design and construction for the renovation of Columbia Pool buildings are in FY 2025/26 and FY 2026/27. The scope of work includes redesign of the existing office and pool equipment/park maintenance buildings to obtain a permit for the pool buildings from the Department of State Architect, and may include the evaluation of the drainage around the buildings and ADA compliance of the park restroom and pool office. Evaluation of the roof conditions, evaluation of the drainage around the buildings, and updating facilities to meet current codes.

Project Evaluation and Analysis

All costs for the listed facilities are the responsibility of the City, and therefore funding for infrastructure repair and renovation must be planned.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Per agreement with the Sunnyvale School District, the district pays for 50% of maintenance costs incurred while shared capital improvements costs will need to be negotiated and agreed upon by the City and the Sunnyvale School District.

829190 - Community Center Comprehensive Infrastructure

Originating Year:	2012	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Matt Brunnings

Project Description/Scope/Purpose

This project provides for infrastructure repairs and renovations to the Indoor Sports Center, Performing Arts Center, Creative Arts Center, and Recreation Center buildings at the Community Center. This work includes heating, ventilation, and air conditioning system (HVAC) repair/replacement, fire protection systems repair/replacement, electrical and plumbing repair/replacement, miscellaneous interior upgrades (floor refinishing and replacement, speaker systems, etc.), Creative Arts Building lobby finishes replacement, and other work as necessary to meet current codes.

Funds in FY 2026/27 and FY 2027/28 are for infrastructure renovations to the Indoor Sports Center, Performing Arts Center, Creative Arts Building, and Recreation Center Buildings at the Community Center. Improvements include: replacement of bleachers for the Indoor Sports Center, replacement of door hardware in all four buildings, door replacements, facility signage (including a lighted marquee), interior lighting upgrades, restroom and facility renovations for facilities not upgraded in 2017 and network wiring.

Project Evaluation and Analysis

This project will enable the City to maintain the current service levels for community recreation programs at the Community Center and protect the City's investment in its infrastructure.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

829440 - Land Acquisition Due Diligence

Originating Year:	2012	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

Muni Code Ch.18.10 requires developers to dedicate land or pay an in-lieu fee for park land for new residential development. Development activities may result in an offer of dedication of park land and related property to the City. This project allows for due diligence to cover for professional services associated with review and evaluation of parcels dedicated to the City and coordination with State regulatory oversight agencies. This project includes work with developments that are proposing to dedicate land to fulfill their Park Dedication requirements. This project also covers exploratory due diligence for City purchases of park lands.

Project Evaluation and Analysis

It is in the City's best interest to conduct appropriate due diligence prior to accepting any property in order to reduce risk. Acceptance of offers for dedication of land without performing due diligence can expose the City to claims resulting from the presence of hazardous materials that may be discovered at a later time. Due diligence tasks may include, but are not limited to, the following: investigating the land to ensure site conditions do not impose any current or future burden to the City; reviewing or conducting studies, such as geotechnical or hazardous materials reports; acquiring title reports and paying escrow fee and/or title insurance fees; and preparing or reviewing legal descriptions of the land/property.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

830280 - Sunnyvale Baylands Park Infrastructure

Originating Year:	2010	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

The City has a 25 year lease (with an automatic 10 year extension) that commenced in 2010 with Santa Clara County for the operation of this Baylands Park. This project provides for the repair and/or replacement of infrastructure including irrigation systems, playground equipment, drainage systems, buildings, and asphalt surfaces at Sunnyvale Baylands Park.

Current funds for design and construction for renovation and/or replacement of irrigation system, drainage systems bathrooms, parking lots and pathways, bridges/decks, boardwalk and playgrounds. Cost estimates were developed by staff based upon recently completed projects.

Project Evaluation and Analysis

This project is necessary to maintain existing recreational infrastructure. Alternatives to funding this project include maintaining the park in its current state and eliminating components as they are no longer useful and safe. For example, one play area has already been closed and removed due to unsafe conditions and similar steps would be taken throughout the park as components age. Eventually this alternative would significantly change the look and feel of this park, and it would become a more rustic and natural type of park.

Upon the completion of the Cricket Stadium Study Issue DPW 20-15, cost estimates for this project may change.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

830290 - Braly Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1969, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes renovation of recreation and maintenance buildings; replacement of park and building lighting systems with energy efficient fixtures; replacement of playground surfacing; replacement of the water play feature; replacement of portions of landscaped and ornamental grass areas and the associated replacement of irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of picnic areas; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in FY 2026/27 are for design (Outreach and Designs anticipated to take two years) and funds in FY 2028/29 are for construction.

Project Evaluation and Analysis

This project is necessary to ensure the optimal level of recreational use, attractiveness, accessibility, and sustainability for this facility.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Design and construction of this project will be scoped to fit within the allocated budget.

830310 - Community Center Grounds Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Matt Brunnings

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1973, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings were held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input was used to determine the overall design.

Based on community input, the scope includes a new restroom; replacement of pathway and parking lot lighting systems with energy efficient fixtures; replacement of the ornamental pond; construction of playground and picnic areas; replacement of portions of landscaped and ornamental grass areas and the associated irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; replacement of portions of concrete pathways; installation of a new playground; new picnic areas along a beam trail; new amphitheater seating area; additional public WiFi infrastructure, and additional work required to connect interlinking areas. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project.

Project Evaluation and Analysis

830320 - De Anza Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1963, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of park lighting systems with energy efficient fixtures; construction of a water play feature; conversion of the skate rink to a mini-skate park; construction of one basketball court and one tennis court; replacement of portions of landscaped and ornamental grass areas and replacement of irrigation/pump system; and replacement of portions of drainage systems. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process. The concrete pathways were replaced in FY 2021/22 and the elementary-age playground equipment was replaced in FY 2024/25. The Resilient Surfacing is scheduled to be replaced in the FY 2030/31 Resilient Resurfacing Project.

Funds in FY 2027/28 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2029/30 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Design and construction of this project will be scoped to fit within the allocated budget.

830330 - Encinal Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2032/33	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1987, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of the athletic field including the baseball backstop; restroom building; replacement of the playground for 2-5 year olds; replacement of park lighting systems with energy efficient fixtures; replacement of landscaped and ornamental grass areas and replacement of the irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. This will be re-evaluated with community input. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process. The elementary-age playground equipment was replaced in FY 2023/24 through project 820270 - Playground Equipment Replacement.

Funds in FY 2030/31 are for design (Outreach and Design is anticipated to take 2 years) and funds in FY 2032/33 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. 830350 - Fairwood Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2033/34	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1975, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of the maintenance building; replacement of park lighting systems with energy efficient fixtures; replacement of the playground for 2-5 year olds; replacement of portions of landscaped and ornamental grass areas and replacement of the irrigation/pump system; replacement of park fixtures; renovation of picnic areas; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process. The elementary-age playground equipment was replaced in FY 2018/19 and the restroom building will be replaced in FY 2025/26 by 818550 - Park Buildings – Rehabilitation.

Funds in FY 2031/32 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2033/34 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

830360 - Greenwood Manor Park Renovation

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1955, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of landscaped and ornamental grass areas and the replacement of the irrigation system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of drainage systems; and replacement of concrete pathways. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process. The elementary-age playground equipment will be replaced in FY 2023/24.

Greenwood Manor Park is currently in PG&E right-of-way. In late 2021, the City obtained PG&E authorization for the use of their right-of-way for Greenwood Manor Park. All proposed future improvements within PG&E right-of-way will also require PG&E review and approval.

Funds in FY 2029/30 are for design and funds in FY 2030/31 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

830380 - Las Palmas Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Connie Phan

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1971, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of the athletic field and bleachers/fencing; renovation of recreation buildings; new maintenance building; replacement of park lighting systems with energy efficient fixtures; renovation of ornamental pond and water play features; the addition of an auxiliary restroom, renovation of dog park; replacement of portions of landscaped and ornamental grass areas and the replacement of the irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; and replacement of portions of drainage systems. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. 830390 - Murphy Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1969, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of the bowling green turf with synthetic turf; replacement of the playground; replacement of park lighting systems with energy efficient fixtures; renovation of the fire pit and amphitheater including the seating area; replacement of portions of landscaped and ornamental grass areas and replacement of the irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways including Recreation Building entry. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in FY 2032/33 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2034/35 are for construction.

830400 - Orchard Gardens Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1966, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes renovation of the recreation building; replacement of park lighting systems with energy efficient fixtures; replacement of one existing playground and relocation of the basketball court as allowed by the San Francisco Public Utilities Commission (SFPUC). The SFPUC owns pipelines running beneath the park, so the City must coordinate all renovations.

Additionally, the project includes the replacement of portions of landscaped and ornamental grass areas and replacement of existing irrigation system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in FY 2025/26 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2027/28 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

830410 - Ortega Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2034/35	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides major renovation of the facility, originally built in 1969, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stakeholders. This info will help determine the scope. This park has been identified for cricket batting cages.

The current scope includes replacement of the athletic field with synthetic turf; replacement of ballfield bleachers/fencing; renovation of recreation/maintenance buildings; addition of a dog park; gazebo renovation; replacement of park lighting with energy efficient fixtures; renovation of the playgrounds and the water play feature; replacement of portions of landscaped and ornamental grass areas; complete replacement of irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; replacement of portions of concrete pathways; replacement of decomposed granite pathways; overlay of the asphalt parking lot; and work required to connect interlinking areas. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope. Only a portion of this park's irrigation and landscaping are included in this scope and estimate. This will be re-evaluated with community input. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in 2025/26 are to replace the gazebo, since the park renovation isn't until FY 2032/33. Funds in FY 2032/33 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2034/35 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Design and construction of this project will be scoped to fit within the allocated budget.

830420 - Panama Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1984, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes renovation of the athletic field and bleachers/fencing; replacement of park lighting systems with energy efficient fixtures; construction of a playground; replacement of restroom building with a modular restroom building, reconstruction of parking lot (6,600 sq ft), replacement of portions of landscaped and ornamental grass areas; replacement of the booster pump/irrigation; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. This will be re-evaluated with community input. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in FY 2028/29 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2030/31 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Design and construction of this project will be scoped to fit within the allocated budget.

830430 - Ponderosa Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2036/37	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1970, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users and other stake holders. The input will be utilized to assist in the determination of the scope of work. Current scope includes replacement of athletic field, renovation of playground equipment; construction of water play feature; replacement of park lighting systems with energy efficient fixtures; replacement of portions of landscaped and ornamental grass areas and associated irrigation; replacement of park fixtures including benches and tables with recycled plastic equipment; renovation of picnic areas; resurfacing courts and conversion of lighting to LED; renovation of bocce/horseshoe areas; replacement of entire drainage system; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. This will be re-evaluated with community input. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process.

Funds in FY 2035/36 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2036/37 are for construction.

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1962, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes replacement of the athletic fields and bleachers/fencing; replacement of park lighting systems with energy efficient fixtures; replacement of the playgrounds; conversion of the skate rink to a mini skate park; replacement of portions of landscaped and ornamental grass areas and replacement of the irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. 830460 - Serra Park Renovation and Enhancement

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1965, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the preliminary design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes renovation of the recreation and building complex; replacement of park lighting systems with energy efficient fixtures; renovation of the water play feature; reconstruction of four tennis courts; replacement of portions of athletic field and replacement of the irrigation/pump system; assessment of artificial creek system replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have previously been renovated within the scope of other capital projects based on the completion of their expected life-cycle and according to an established replacement schedule, and as a result and will not need to be included in the scope of this project. This will be re-evaluated with community input. The current cost estimates were based on recent construction; the actual costs and scope could change pending public input during the design process. The bathroom construction was completed in FY 2022/23.

Funds in FY 2024/25 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2026/27 are for construction.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

830510 - Plaza del Sol Phase II

Originating Year:	2014	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

Plaza del Sol is being constructed using a phased approach as approved by Council in FY 2002/03. Phase I, which included construction of the basic plaza design, concrete paving, young trees, other screening, and selective decorative features, was completed in June 2004. Phase II includes enhancements to the basic plaza.

Phase II Conceptual Design was presented to the Parks and Recreation Commission and approved by the City Council in August 2020. The approved design includes a garage roof ramp with a walkable/useable mound, play equipment, overhead lighting, misters, enhanced labyrinth, additional landscaping, vegetated shade, and planters/seatwalls. A design consultant was selected September 2021 to further develop the approved conceptual design and prepare bid and construction documents for Phase II Design. Construction is anticipated to begin summer 2025 with completion anticipated in fall 2026.

Project Evaluation and Analysis

The completion of Phase II for Plaza del Sol is intended to enhance use of the plaza through the additional features. The features have yet to be determined; however, based upon earlier studies and discussions they may include ornamental water features, restrooms, and/or enhanced landscapes.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Upon completion of the project, additional annual operating impact costs are anticipated for maintenance. In November 2020, the City received a cost estimate for annual pressure washing of \$11,700. The Parks Division requested an additional six (6) cleanings from April to October to address the busiest months (both for users and birds), which has an estimated cost of \$5,850. Total annual operating impacts are \$17,550.

831850 - Washington Park Renovation and Enhancement

Originating Year:	2016	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2036/37	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1945, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work.

The current scope includes renovation of Jelcick field structures; replacement of park and building lighting systems with energy efficient fixtures; reconstruction of basketball and tennis courts; replacement of playground, replacement of portions of landscaped and ornamental grass areas and replacement of the irrigation/pump system; replacement of park fixtures, including benches and tables with recycled plastic equipment; replacement of portions of drainage systems; and replacement of portions of concrete pathways. Proposed enhancements are in accordance with approved design and development guidelines for parks. Some features will have been renovated prior to commencement of this project, within the scope of other capital projects, based on the completion of their expected life-cycle and according to an established replacement schedule. As a result, they will not need to be included in the scope of this project. The restroom building was replaced in FY 2021/22 and elementary-age playground equipment will be replaced in FY 2024/25 with funding in 820270 - Playground Equipment Replacement.

Funds in FY 2034/35 are for design (Outreach and Design is anticipated to take two years) and funds in FY 2036/37 are for construction.

Project Evaluation and Analysis

This project is necessary to secure this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Design and construction of this project will be scoped to fit within the allocated budget.

831860 - John W. Christian Greenbelt Pathway Rehabilitation

Originating Year:	2016	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project will provide an asphalt rehabilitation to the existing bicycle\pedestrian pathway of the John W. Christian Greenbelt. The greenbelt is located on the Hetch-Hetchy water system right-of-way and is a linear, eighty-foot wide strip of land (the asphalt pathway is approximately 10 feet wide). The Greenbelt begins at Orchard Gardens Park and ends at the City's eastern boundary at Calabazas Creek, a distance of over two miles.

Current funds are for design and construction. The replacement schedule will begin in 15 years. Funds in FY 2034/35 are for design and construction.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure and prevent hazardous conditions. Not funding this project would result in deterioration of the pathway, possibly causing large potholes, fragmented asphalt debris, and poor aesthetics.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

Park Dedication Fund

831880 - Preschool Outdoor Play Area

Originating Year:	2016	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

This project provides for dedicated outdoor programming space and storage at the exterior of the buildings housing the existing preschool programs at Murphy and Serra Parks. The improvements include the creation of a new non-slip surface for outdoor play, fencing with lockable entry gate, and educational learning stations. An additional \$5,000 is allocated for furniture, fixtures, and equipment at each location. Current funds are for design and construction of Serra Park for outdoor programming space.

FY 2024/25 - The Contractor has placed the order for the playground equipment and DPW-PAS is expecting it to arrive in mid-February. Pending updates from DPW.

Project Evaluation and Analysis

The preschool programs at Murphy Park and Serra Park are popular revenue generating programs and are expected to grow in attendance with the addition of the new patio enhancement. Preschool programs currently do not have dedicated outdoor space, which is standard in the industry. The dedicated space will allow for enhanced safety measures and educational opportunities.

Fiscal Impact

This project is funded by Park Dedication In Lieu fees. By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

In FY 23/24, Budget Mod 13 (RTC 24-0291) was approved, adding \$27,939 from Project 820280 - Park Furniture and Fixtures Replacement.

831980 - Annual State of the City

Originating Year:	2017	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

State of the City is an annual event lead by City staff consisting of the Mayor's State of the City address, Board and Commission Recognition and the presentation of Community Awards to outstanding members of the Sunnyvale community. Event is open to the public and held on a date is selected in consultation with the Mayor. Staff decides location selection based on current year's plans. The event details change from year to year, based upon the event theme, selected location and event characteristics. Staff resources are maintained in the operating budget. Project resources will be used for equipment rental, sound system rental, food, awards, entertainment and promotional materials.

FY 2023/24 event included a Civic Center Grand Opening celebration as well.

Project Evaluation and Analysis

State of the City allows the public an opportunity to listen to the Mayor address the public regarding the City's accomplishments and set a course for upcoming goals. It also provides City Council with the opportunity to present Community Awards and interact with members of the public. The timing and scope of the event changes from year-to-year.

Fiscal Impact

By utilizing a project for this annual event, it will aid in better management of resources form year-to-year, given the varied timing and scope of the event.

Additionally, the Department of Public Works and Department of Public Safety have been required to contribute additional staffing and budget resources to the production of this event - beyond the regular delivery or hourly flex. Staff will work closely with these departments to capture and analyze these resources and explore increasing the budget allocation for this event.

832401 - Silicon Valley Healthy Aging Partnership (SVHAP)

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

As part of the Silicon Valley Healthy Aging Partnership (SVHAP), the Sunnyvale Senior Center participates in a grant from Sourcewise that will support Disease Prevention and Health Promotion programs. SVHAP is a coalition of agencies in Santa Clara County focused on bringing programs of value to the community. The grant, shared by three agencies, enables those agencies in SVHAP to implement evidence-based programs (EBPs) to older adults throughout the county.

Project Evaluation and Analysis

Evidence-based programs are based on a rigorous study of interventions and are likely to produce positive changes or outcomes for participants. This grant will implement the following evidence-based programs: Matter of Balance, SAIL (Stay Active and Independent for Life), Powerful Tools for Caregivers, Active Choices, Aging Mastery and Bingocize. The grant also supports training and technical support for the community partners implementing these programs during this grant period.

Fiscal Impact

Project is fully funded by a grant received from Sourcewise Older Americans Act funding and appropriated to provide administration/operational support of evidence-based programs. This is a reimbursable grant and available/applied on an annual basis. If the grant is not awarded in any one year, there will be no funds spent by the City in support of this program.

832710 - Synthetic Turf Sports Field

Originating Year:	2006	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project provides synthetic turf to replace existing natural turf at City Parks. Funds will provide for the removal of existing turf to approximately six inches and provide new base rock, asphalt, and synthetic turf layers for sports games.

The costs for replacement of the artificial turf for Fair Oaks Park (830340) has been added to this project. The funds in FY 2029/30 are for design and FY 2030/31 are for construction. The artificial turf has a life-cycle of 10 years. The next replacement cycle will be in FY 2039/40 and FY 2040/41. Future synthetic turf replacement costs for Fair Oaks and other parks will be re-evaluated in the next projects budget cycle and included in this replacement project.

Project Evaluation and Analysis

Sports field availability, usability, attractiveness, and safety would be increased through installation of year-around usable synthetic sports turf. Estimated cost is \$9.71 per square foot based upon current industry information. Total square footage to replace is 99,400. Alternatives to completing this project would be to continue maintaining the existing natural turf and not enhance the level of service for sports fields in Sunnyvale.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

New operating costs for maintenance of the synthetic turf would be offset by elimination of the currently planned operating costs to maintain the natural turf on site. Existing maintenance and open space use agreements with the school district could be impacted with unknown impacts to ongoing and/or capital costs.

832720 - Washington Pool Infrastructure Replacement and Renovation

Originating Year:	2013	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for the replacement and/or repair of pool infrastructure and related components as necessary, based upon annual inspections by City staff at Washington Community Swim Center Pool. Funds have been budgeted for replacement of smaller components at recurring intervals based on expected life-cycles of the equipment such as ultraviolet (UV) disinfection bulbs, chemical feed pumps and other valves and motors. Funds in off project years are for routine renovation and equipment replacement. Larger projects to replace major components are planned as follows: The funds in FY 2031/32 are scheduled for the filter, controller, and disinfection system. Funds in FY 2033/34 are scheduled for the pump, heater, and control panel. Beyond the 20 year budget, replacement of pool plaster, tile finish, and pool decking will be necessary.

The life cycle estimates for various equipment like valves, pumps, UV, and other chemical equipment have expected life-cycles ranging from two years to 15-20 years.

Project Evaluation and Analysis

Regular maintenance, capital replacement, and routine upgrades to pool infrastructure components will allow the pool to operate in a safe and healthy manner.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

832730 - Renovate Median Landscaping to Low Maintenance

Originating Year:	2018	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

Renovate the center median landscaping on Fremont Ave. (from City limit to El Camino Real) and Fair Oaks Ave., emphasizing a drought tolerant, low maintenance landscape plan and install new irrigation. The new landscaping would improve lines of sight, minimize water use and waste, and reduce the number of hours required to maintain. Anticipated water savings are between 15-30% of centum cubic feet (CCF) utilized. This project does not include concrete or curb work. The project will also explore the use of recycled water for irrigation. A study session is scheduled for FY 2024/25.

Project Evaluation and Analysis

This project is necessary as the center medians on these three busy streets have become difficult to maintain with inefficient outdated irrigation that frequently leaks.

Fiscal Impact

This project will be funded by developer contributions.

832750 - City Maintained Tree Inventory

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

This project would hire a consultant to update the entire City tree inventory (except the Golf Courses) and map each tree using a global positioning system (GPS). Currently, the City maintains an estimated 38,000 City trees. This project would also update the City tree inventory software to a current version capable of mobile users input. The Request For Proposal (RFP) for this study was completed in FY 2020/21 and the funds in FY 2028/29 are for the software upgrade.

Project Evaluation and Analysis

This project would provide a current inventory of all City maintained trees including type and GPS locations.

Fiscal Impact

This project is funded by the General Fund.

832770 - De Anza Park Pathway Renovation

Originating Year:	2018	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

This project would renovate and replace all park pathways at De Anza Park. There are approximately 32,000 square feet of asphalt concrete pathways that are all over 30 years old and have been patched and sealed, but are in a declining state and in need of total replacement. The asphalt concrete will be upgraded to standard concrete. Design was completed in FY 2020/21, and construction was completed August 2022.

Project Evaluation and Analysis

Without renovation and replacement, the pathway surfacing will continue to deteriorate, eventually becoming unusable, prone to large cracks and raised concrete. Postponement of this project could result in higher costs due to continued deterioration and increased slip and fall hazards.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

832800 - Performing Arts Center Infrastructure

Originating Year:	2018	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

This project provides for infrastructure repairs and renovations that are unique to the Performing Arts Center which includes the theater and dance studio facilities located at the Community Center campus. This work does not include roof repairs/replacement, heating, ventilation, and air conditioning (HVAC) system repair/replacement, fire protection systems/replacement and electrical and plumbing repair/replacement as these items are addressed in 829190 - Community Center Comprehensive Infrastructure.

Scope items in this project include equipment replacement (seating), renovations to meet current codes (addressing safety, access, and path of travel) and facility enhancements to serve user groups and audiences (restroom expansion, quiet theater door closure systems and new projector systems).

Current funds are for Phase 1 project updates include Projection Lighting and Quiet Theater Door Closers, and Theater/Studio Lobby Lighting to LED and Dance Studio Lighting to LED Lighting (existing lighting is fluorescent and incandescent fixtures, which will be converted to LED, along with any requirements to upgrade switches and wiring to meet Title 24 requirements).

Phase 2 project updates will occur FY 2025/26 for Design and FY 2026/27 Construction. The updated scope includes Replace Theater Seating, and Restroom expansion/refinish existing restrooms (the restroom expansion will meet current ADA and Building code requirements), and Rebuild Theater Staging and Surfacing.

Project Evaluation and Analysis

This project will enable the City to maintain the current service levels for community recreation programs at the Community Center and protect the City's investment in its infrastructure. To achieve an expansion in restroom facilities and meet ADA and Building code requirements, staff recommends expanding the restroom footprint to include the adjacent vacant office. This would allow the existing count of fixtures to go from 2 female stalls, 1 male stall + 2 urinals, to include 2 additional single occupancy, ADA-compliant restrooms. One reason for deferring the restroom improvements to FY 2026/27 with the theater seating replacement is consolidating ADA access improvements triggered by both the restroom and seating projects as well as minimizing downtime for construction.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

The Department will seek grant funds for the upgrade to LED lighting. Additionally, electricity savings are anticipated upon implementation of the LED lighting and will be incorporated into the operating budget.

832820 - West Hill Renovation Park Project

Originating Year:	2018	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2036/37	Category:	Capital	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for basic recreational improvements to the West Hill section of the Sunnyvale Landfill area. West Hill is a 2.6 acre area that is currently designated as open space with trails for hiking, biking, bird watching and jogging. The trail system that was built in the early 1990's can be improved with greater access and amenities for Sunnyvale residents. The project scope includes multiple benches and shade structures, improving grading of the trails, creating natural barriers and artificial burrows for the preservation of Burrowing Owl habitats, additional access points for trails, and a complete restroom and drinking fountain area.

Project Evaluation and Analysis

This project will enable the City to provide additional recreational opportunities to residents and protect the City's investment in its infrastructure.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Additional operating expenses will be incurred due to hand trimming of vegetation around owl burrows, hand mowing of portions of the area and other efforts related to enhancement and management of the habitat as directed per RTC 14-0034.

833940 - Orchard Heritage Park and Museum Analysis Study

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

The Sunnyvale Historical Society and Museum Association (SHSMA) expressed interest in exploring the possibility of expanding the museum grounds at Orchard Heritage Park further east towards Michelangelo Drive. The purpose of the expansion would be to accommodate additional items such as exhibits, historical structures, a windmill and ultimately making one cohesive location which also includes the orchard. The expansion, as proposed, will require the removal of trees in the orchard. If approved, this Study Issue would review concepts to expand the current facility, including the identification of boundary limits, as well as establish a plan for the future of the orchard, including maintenance. Staff would hire a consultant to develop concepts for site plans, identify utility needs, review California Environmental Quality Act (CEQA) requirements, assess potential costs, hold public outreach meetings, and identify future options for operating and maintaining the orchard.

Project Evaluation and Analysis

As part of RTC 16-0182, Council proposed and seconded that staff have additional discussions with the museum staff on alternatives that may exist that do not require any loss of orchard space. The RTC was approved by Council by a vote of 5 to 0. It was subsequently ranked by the City Council for consideration as a budget supplement in the FY 2018/19 Recommended Budget.

Fiscal Impact

The source of funding would be the General Fund. However, some aspects of the work could be funded through Park Dedication Fund. As the scope of work, including tasks, is refined, staff will look to appropriate and utilize Park Dedication Funds where appropriate.

Funding Sources

General Fund and Park Dedication Fund when appropriate.

834330 - Corn Palace Park Development

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will design and construct a new 2-acre public park at the Corn Palace II development site (1142 Dahlia Court). The park property is oriented in the northeast corner of Toyon Avenue and Lily Avenue and extends east to Lawrence Expressway. Public Street improvements along Toyon Avenue and Lily Avenue will be installed as part of the Corn Palace II development owned by a developer.

As identified in the Council-approved Parks of the Future Study, a park less than three acres may include items such as: children's play area (Ages 6-12), open turf area, sports courts (1/2 court basketball or single tennis court), and restrooms. Items that will not be considered will include: community garden, sports fields (baseball, football, soccer, softball, multi-purpose), full-service recreation centers, and swimming pool. Costs for the proposed park will be evaluated in the future and public input meetings during the design process will help determine what amenities will be included.

The current cost estimates were based on recent construction estimates for new parks; the actual costs and scope could change pending public input during the design process. Design and construction of this project will be scoped to fit within the allocated budget.

The City Council voted on June 15, 2021, to accelerate the development of the Corn Palace Park. They moved the funds from FY 2037/38 for design and FY 2038/39 for construction to FY 2022/23 for design. Construction will start in FY 2023/24 and be completed in FY 2024/25. City Council has directed staff to have the park completed by December 31, 2024. The current completion date is expected spring 2025.

Project Evaluation and Analysis

This project is necessary to design and construct a new park on City-owned property, purchased as part of the Corn Palace II development owned by a developer.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

834340 - Corn Palace Park Maintenance

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	James Stark

Project Description/Scope/Purpose

The Corn Palace park property is oriented in the northeast corner of Toyon Avenue and Lily Avenue and extends east to Lawrence Expressway. Funds are necessary to maintain and secure this City-owned land until the park is constructed.

On June 15, 2021, City Council accelerated the construction of the Corn Palace Park to be completed by FY 2024/25. The park is anticipated to be complete in spring 2025. Anticipated ongoing costs associated with the park after development can be found with project 834330 - Corn Palace Park Development.

Project Evaluation and Analysis

This project is necessary to maintain and secure City-owned lands until the park is constructed so that the land does not present health and safety hazards.

Fiscal Impact

This maintenance project is funded by the General Fund and there is a separate project for design and construction of the new park (834330) funded by Park Dedication Funds.

834680 - Las Palmas Tennis Center Needs Assessment

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Arely Trujillo

Project Description/Scope/Purpose

This project would commission an assessment study of the existing buildings at the Las Palmas Tennis Center. The purpose of the study is to evaluate the current physical condition of the various buildings and explore the need for renovation or replacement. The study would also evaluate the size and type of buildings to ensure we are providing appropriate levels of service to the Sunnyvale tennis community. Based on this study a future renovation project may be proposed. The study will be completed in FY 2022/23.

Project Evaluation and Analysis

This study is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

834770 - Lakewood Park Renovation and Enhancement

Originating Year:	2019	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Bennett Chun

Project Description/Scope/Purpose

This project will provide a major renovation of the facility, originally built in 1964, to ensure its sustainability for the future by enhancing recreational usability, increasing attractiveness, and reducing the use of utilities. Public input meetings will be held during the design phase to gather feedback from neighbors, park users, and other stake holders. The input will be utilized to assist in determining the scope of work. Moreover, this project will be designed and constructed in coordination with the Lakewood Branch Library project.

The original scope includes replacement of the athletic field with synthetic turf (revised to natural grass per Council Direction October 2023) and bleachers/fencing; addition of a dog park, renovation of recreation, maintenance, and restroom buildings; replacement of the concession shack with a modular restroom/concession structure; replacement of park and building lighting systems with energy efficient fixtures; replacement of playgrounds; replacement of portions of landscaped and ornamental grass areas and the associated irrigation/pump system; replacement of park fixtures, including benches and tables, with recycled plastic equipment; replacement of portions of drainage systems; replacement of portions of concrete pathways; overlay of the asphalt parking lot; and the additional work required to connect interlinking areas. Proposed enhancements are in accordance with approved design and development guidelines for parks. A design consultant was selected in September 2022 to develop design and prepare bid and construction documents. Construction is anticipated to begin in fall 2025 with completion in winter 2027.

Current funding is for design and construction. Turf renovation and irrigation replacement should be replaced every 25 years.

Project Evaluation and Analysis

This project is necessary to secure for this facility the optimal level of recreational use, attractiveness, and sustainability in the future. This project replaces Project 831830 - Lakewood Park Renovation and Enhancement because it is dependent upon the siting of the proposed branch library project at Lakewood Park.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

In September 2020, the City received \$1.5M in grant funding from the County of Santa Clara. The funding is to help build an all-inclusive playground for people of all ages and all abilities.

Design and construction of this project will be scoped to fit within the allocated budget.

Funding Sources

Park Dedication Fund; All-inclusive Playground Grant (AIPG)

835200 - Cricket Stadium at Baylands Park

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Dennis Ng

Project Description/Scope/Purpose

This project is to partner on a study (Study Issue DPW 20-15) for the feasibility of a cricket stadium at Baylands Park. American Cricket Enterprises (doing business as "Major League Cricket") has proposed to install an international grade cricket stadium within Baylands Park to host international, major league, minor league, and youth cricket events, concerts, and other compatible uses during the Cricket offseason.

Amenities included as part of the stadium include viewing platforms for approximately 500 patrons, passive grass seating for approximately 3,500 patrons, and a media building for broadcasting international and major league events. The media building also houses player changing areas and concessions. Two large screens are also proposed as part of the stadium.

Project Evaluation and Analysis

If the County is amenable to the stadium is multi-pronged and involves hiring multiple consultants. Staff would engage the County and American Cricket Enterprises to discuss and negotiate business terms. Simultaneously with this effort, staff would procure consultants for the following expertise:

- Economic: Evaluation of economic impacts anticipated to the City and region will be required. The evaluation would need to include changes in use to Baylands Park, as the proposed stadium currently is sited atop existing play and picnic areas. American Cricket Enterprises has stated in their proposal that they anticipate \$75M in revenues to be realized by the City over a 10-year period.
- Financial: The study would look at various financing strategies. In addition, financial models will need to be run to determine the initial capital cost required and anticipated ongoing maintenance costs. The proposal indicated that American Cricket Enterprises anticipates this project to be a public-private partnership.
- Civil Engineering review: An engineering consultant would be retained to evaluate site layout, possible impacts to current facilities, and to site displaced picnic and playground facilities at Baylands Park. A preliminary utilities analysis would need to be part of the study.
- Outreach/community engagement: Community engagement will be a critical component of this study issue. A public engagement specialist will be procured to ensure that a proper cross-section of the populations is adequately represented when presenting the proposed project.

Fiscal Impact

The total cost for the study has been estimated at \$200,000. The City Council has agreed to fund up to \$50,000 out of the Council Set Aside via General Fund.

Funding Sources

Contributions from American Cricket Enterprises \$150,000, and \$50,000 for Council Service Level Set Aside.

Plans and Goals

835301 - ECHD Grant ShapeUp Sunnyvale

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Angela Chan

Project Description/Scope/Purpose

ShapeUp Sunnyvale builds on Columbia Neighborhood Center's (CNC) Active Living and Healthy Eating Initiative by offering a two prong program – fitness and healthier cooking. Participants select to participate in one or both components. With the fitness option, participants commit to get active weekly for an 8-week timeframe by selecting from a menu of fitness options offered through the Recreation Services Division. The healthier cooking component provides once-a-week take-home meal kits that participants pick up from the Community Center or CNC for 8 consecutive weeks. The meal kits are created by a professional caterer and includes fresh ingredients, a recipe card, a link to a video demo on how to cook the meal and an optional virtual chat to talk with the caterer if a participant has questions or alternative ingredients due to food restrictions.

The program has two sessions per year, Fall and Spring. Each session is 8-weeks long and require each participant to complete a pre-program survey, active participation in each 8-week program and a post program survey at the program's conclusion.

Project Evaluation and Analysis

The program has specific metrics outlined in the grant contract it must meet. These include: number of participants served; increase physical activity per week, minimum of 20 minutes; and increase home prepared meals by a minimum of 1 per week.

Fiscal Impact

This is a grant and available/applied on an annual basis. If the grant is not awarded in any one year, there will be no funds spent by the City in support of this program.

Funding Sources

El Camino Healthcare District grant in the Youth and Neighborhood Services Fund.

835400 - Contribution to Our City Forest

Originating Year:	2020	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

City Council adopted the Urban Forest Management Plan (UFMP) in September 2014 (RTC 14-0396). The overall goal of the plan is to help sustain, protect, and enhance the urban forest in the City of Sunnyvale in order to maximize the many benefits that it provides to residents. Staff has been making consistent progress on the implementation of the UFMP since its inception. Currently the Trees Division is considering ways of working toward the goal of encouraging proper tree management on private property. To this end, an opportunity to partner with Our City Forest (OCF) to offer subsidized trees to Sunnyvale residents to be planted on the resident's private property has come forward. This program would only be available for planting trees on the resident's private property and not on City property or the right of way (ROW).

Project Evaluation and Analysis

Under the proposed program Sunnyvale residents would apply for a cost subsidized tree to be planted by OCF. The total cost is \$350 per tree. Sunnyvale residents will pay \$50 directly to OCF, with the remaining \$300 to be paid by the City of Sunnyvale to an amount not to exceed \$15,000.

Fiscal Impact

The portion to be paid by the City is not to exceed \$15,000 for the program and is proposed to be funded by the City Council set aside. Trees staff time to facilitate the program will be absorbed in the current operating budget. The City will reimburse OCF twice yearly for costs. The program will terminate once all City funds for the program have been spent or after two years, whichever comes first.

835620 - Cultural Inclusion

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Garrett Kuramoto

Project Description/Scope/Purpose

Establish services and citywide priorities that:

- (1) continue to celebrate Sunnyvale's diversity including an annual cultural celebration/outreach event, or multiple smaller events;
- (2) create a framework that aligns services to ensure equitable outcomes for all residents;
- (3) continue to support and implement effective programs/services such as listening sessions, community outreach efforts, etc.

Update FY24 AUTO - 1877 Change in Scope: Training is removed and incorporated into a separate budget for OCM to manage. LRS will keep the portion of funding available for cultural events.

Project Evaluation and Analysis

Created performance measures in the areas outlined above and report out on status at the end of the fiscal year, including but not limited to adopting a citywide framework and workplan, and implement a new citywide cultural/outreach event, or multiple smaller events.

Please see document attached to the project for detailed list of events.

Fiscal Impact

This project is for the cost of training and an annual event/multiple smaller events at the Director's discretion. No additional operating budget is needed.

835830 - Manzano Way Park Acquisition

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

On January 20, 2004, the City of Sunnyvale Public Works Department received a letter from the San Francisco Public Utilities Commission (SFPUC) inquiring whether the City would be interested in purchasing the two vacant residential lots on Manzano way for the asking price of \$680,000. Staff began to work to see if there was interest in this property for either a low-income housing project or for some recreation use. After several weeks of review and exploration of various alternatives, staff did not believe the limited benefit of purchasing this property for either a low income or recreational use justified the \$680,000 asking price. Staff recommended declining the SFPUC offer in RTC No. 04-089, which Council passed unanimously.

Recently SFPUC marketed and broadly exposed the two residential parcels for sale through a brokerage firm. Multiple bids were tendered in late August 2019. However, due to market uncertainty emerging from the COVID-19 Pandemic, the purchase transaction failed. Both parcels were marketed again for sale. In April 2021, staff was directed by Council to start negotiations with SFPUC to purchase both parcels for park use.

The parcels the City of Sunnyvale is purchasing (parcel 1 and parcel 2) are located along the east side of Manzano Way in the Lakewood area, across the street from Fairwood Park. They abut a third parcel (parcel 3), also owned by SFPUC, and sit along the west bank of the Calabazas Creek. When the parcels are developed for park use, the total area would be classified as a "mini park" as defined in the "Parks of the Future" study (RTC No. 09-183).

An appraisal report dated September 15, 2019 was completed by Clifford Advisory LLC, engaged by SFPUC, showed a value of \$1,135,000 for both parcels. This appraisal report was updated in August 2021 to reflect current conditions, confirming the market value of both parcels to be still at \$1,135,000.

Project Evaluation and Analysis

Real property shall be acquired for current or future municipal purposes, and/or to benefit the community. The goal of the land acquisition for park property is to secure Parkland/Open Space for future site improvements that provide City residents with a recreational space to enjoy their community.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

The project was funded for \$1,150,000 the Park Dedication Fund Land Acquisition Set-Aside. Additionally, funding in the amount of \$30,000 was requested for maintenance of the property until it is developed. The maintenance costs are in project 835840 (Manzano Way Park Maintenance) and will be paid for by the General Fund.

835840 - Manzano Way Park Maintenance

Originating Year:	2021	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

The parcels the City of Sunnyvale is purchased (parcel 1 and parcel 2) are located along the east side of Manzano Way in the Lakewood area, across the street from Fairwood Park. They abut a third parcel (parcel 3), also owned by San Francisco Public Utilities Commission (SFPUC), and sit along the west bank of the Calabazas Creek. Parcel 1 is generally rectangular and largely vacant with an area of approximately 6,002 square feet and Parcel 2 is also generally rectangular with some vegetation and an area of approximately 8,817 square feet. Both parcels are zoned R0 - Low Density Residential. Together the two parcels are 14,817 square feet. When the parcels are developed for park use, the total area would be classified as a "mini park" as defined in the "Parks of the Future" study (RTC No. 09-183).

Until the property is developed the City will be required to maintain the land. The maintenance costd are for such things as fencing, security, and keeping the property free of weeds and garbage.

Project Evaluation and Analysis

This project is necessary to maintain and secure City-owned lands until the park is constructed so that the land does not present health and safety hazards.

During the next project budget cycle, a new project will be created for the renovation and enhancement of the park.

Fiscal Impact

It is estimated that \$30,000 annually will be needed for maintenance and security until the property is developed. There will also be ongoing operating costs associated with this land acquisition after it is fully developed as a park.

835880 - Golf Course Irrigation System Replacement

Originating Year:	2022	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Rodney Wilson

Project Description/Scope/Purpose

This project provides for the scheduled replacement/renovation of the irrigation systems at Sunnyvale and Sunken Garden Golf Courses. All components of the systems including central and satellite irrigation controllers, main and lateral lines/piping, flow meters, pumps, wiring, valves, and heads are included, as well as any needed design changes to the system configuration and components. The central computer and all controllers are to be replaced every 15 years, and all other irrigation components are to be replaced every 30 years, as needed. Scope is determined by an annual staff survey and by the architectural consultant during the design phase.

The replacement for the central computer/controller replacement cost is \$850,000, and is programmed for FY 2040/41.

Project Evaluation and Analysis

This project is necessary to maintain existing service levels. Not completing this project would result in irrigation system failures and dead turf, resulting in declining revenues from green fees.

Project scope, costs and implementation years are subject to change pending the results of the Preliminary Design of Golf Course Renovations (831520).

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

835960 - Cricket Batting Cage

Originating Year:	2022	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	James Stark

Project Description/Scope/Purpose

This project originated from Study Issue - DPW 19-07 (Ascertain Suitable Location(s) for the Installation of Youth Cricket Batting Cages), capital project 834810, and RTC 19-0500. City Council has pledged \$200,000 of Park Dedication Funds for construction with the requirement that a minimum of \$75,000 be contributed via grant or outside group funding. The size, number of cages and location will be decided when the \$75,000 is contributed and brought back before Council.

Project Evaluation and Analysis

The growing popularity of cricket requires that the Parks Division analyze how to meet the increasing demands of the playing population. There is strong community support for this project.

Fiscal Impact

City Council has pledged \$200,000 for this project with the requirement that \$75,000 of external funding be met first. The exact fiscal impact will depend on the number of batting cages, amenities, and location selected.

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

\$200K of Park Dedication Funds and \$75K external funding is TBD. For the Park Dedication funded portion by State law, Park Dedication funds are to be used to develop new, or rehabilitate, existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

836050 - Disease Prevention and Health Promotion

Originating Year:	2022	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Angela Chan

Project Description/Scope/Purpose

This grant will fund staff time to seek new partnerships with agencies that serve underserved older adults (i.e. low-income, LGBTQ+, etc.) to join the Silicon Valley Healthy Aging Partnership with the goal of helping new agencies implement and deliver evidence-based health programs to older adults in their community. Will also fund new training opportunities for staff to obtain certification in new evidenced-based programs, and purchase of two laptops for the Sunnyvale program.

This year, the program goal is to establish new partnerships with two new community organizations and train 2-3 staff/volunteers in each new agency in one to two evidenced-based programs. Lastly, each agency will be expected to implement one or two evidenced-based programs in their community and deliver a minimum of 450 hours of programming and serve a minimum of 45 participants. The grant supports relationship building, training and technical support, and program implementation for new community partners to implement these programs during this one-year grant period from October 1, 2023 to September 30, 2024.

Project Evaluation and Analysis

Evidence-based programs are grounded in the rigorous study of interventions and are likely to produce positive changes or outcomes for participants. This grant will implement the following evidence-based programs: SAIL (Stay Active and Independent for Life), Bingocize and Tai Ji Quan, Moving for Better Balance.

Fiscal Impact

This program is grant funded by Sourcewise at \$60K + \$67K and does not require a city match.

Funding Sources

Sourcewise Grant in the General Fund

836150 - Golf Course Assessment

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

This project provides an evaluation and prioritization of Golf Capital needs and renovations at both of Sunnyvale's golf courses. The facilities are aging (Sunnyvale Golf Course was constructed in 1968 and Sunken Gardens Golf Course in 1973) and have not seen significant capital investment in recent years that nearly all areas are in need of full replacement or refurbishing/renovation in the short-term. Some of the needs identified in the recently completed Golf Study include: features rebuilding (greens, tees, bunkers), re-grassing the courses, arbor management, clubhouse replacement/refurbishment, and maintenance facility repairs/upgrades.

Project Evaluation and Analysis

This project is necessary to maintain existing service levels. Not completing this project could result in declining revenues from green fees. This project would identify areas of the facilities that appear valuable to preservation and integration to a facility-wide improvement project, and a list of essential needs.

Fiscal Impact

This assessment is funded by the Golf and Tennis Operations Fund. Specific capital projects will be identified and if implemented, funded by the Park Dedication Fee Fund.

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

836170 - Murphy Avenue Monuments Restoration

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

This project would restore the four South Murphy Avenue monuments. The monuments have become aged and rusting due to exposure and moisture accumulation inside the monuments. The work on the monuments would include disassembling, prepping, sanding, rust abatement, neutralizing the corrosion, and painting.

Project Evaluation and Analysis

This project protects existing service levels, facilities, and infrastructure for the City. The Murphy Avenue Monuments are integral parts of the downtown district.

Fiscal Impact

The project is funded out of the Community Benefits Fund.

836180 - Parks Resilient Surfacing Replacement

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Connie Phan

Project Description/Scope/Purpose

This project replaces resilient surfacing at City parks. The resilient surfacing installed in playgrounds lasts between 6-10 years depending on use and weather. Additionally, new safety guidelines require some surfaces may need to be thicker. Smaller playgrounds may be removal and replacements, but larger projects will include preparation of bid and construction documents by a licensed Landscape Architect to confirm compliance with the latest codes.

All work will be inspected by a Certified Playground Safety Inspector. Playgrounds will be reassessed as the construction year approaches and timing may be adjusted depending on the condition. Current, cost estimates are approximately \$36.40 per square foot to remove, furnish and install new surfacing, not including design or other contractor costs.

The replacement cycle is as follows:

In FY 2024/25, Wiser Park and Swegles Park.
In FY 2025/26, design of Ortega Park, Fairwood Park, and Braly Park; followed by construction is FY 2026/27
In FY 2028/29, design of Seven Seas Park, Murphy Park and Fair Oaks Park; followed by construction in FY 2029/30.
In FY 2030/31, design of Washington Park, De Anza Park and Muwekma Park; followed by construction is FY 2031/32.
In FY 2032/33, design of Ponderosa Park

Project Evaluation and Analysis

This project protects existing service levels, facilities, and infrastructure for the City. Maintaining the condition of playgrounds will enable residents recreational play and facilities for future generations.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

836190 - Ponderosa Park Irrigation Separation

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

In 2019, Santa Clara Unified School District (SCUSD) notified the City it was ending the Joint Use Agreement with the City and SCUSD would take over maintenance of the school open space sites with school district staff. The property lines have been marked and fenced; however, the irrigation lines have not been separated. The project would separate SCUSD irrigation infrastructure from the City. Currently, the City continues to pay for all turf irrigation at the site - approximately four (4.0) acres. The other school site affected by the ending of the Joint Use Agreement is Braly Park, but the irrigation there was already separated. This project will fund the City's portion of the work.

Project Evaluation and Analysis

This project protects existing service levels, facilities, and infrastructure for the City. If the irrigation lines are not separated the City will continue to pay for the SCUSD portion of the irrigation.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

836560 - Research Possible Causes of and Potential Mitigation Measure for Nuisance Bird Populations

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

This Project originated as Study Issue DPW 22-03. Nuisance bird populations such as the American Crow (*Corvus brachyrhynchos*) and Canadian Goose (*Branta canadensis*) have increased dramatically over the last 10 years in many of Sunnyvale's public spaces.

Crows and other birds tend to roost in the downtown areas of Plaza Del Sol and Historic South Murphy Avenue. As a result, residents and City staff have noticed a substantial increase in the amount of bird droppings, especially at Plaza Del Sol, South Murphy Avenue and the immediate surrounding areas including street surfaces and sidewalks. Also, at the Sunnyvale Community Center, Canadian Geese have been particularly difficult to keep away, also resulting in excessive amounts of bird droppings and numerous public complaints. In both areas (Downtown and Community Center), City staff have used a variety of techniques (e.g., visual deterrents, trained dogs) to scare away the birds with little effect.

Project Evaluation and Analysis

This Study would investigate the root causes of the increase in the large nuisance bird population Sunnyvale public spaces with a focus on the areas around Plaza Del Sol, Historic South Murphy Avenue and the Sunnyvale Community Center. In addition, the Study would provide a range of potential mitigation measures and associated costs to implement. The study would determine what is specifically causing the large number of nuisance birds in downtown Sunnyvale and the Community Center such as increased resident population, trash or loss of habitat. The Study would also give a broad range of mitigation techniques and strategies, with costs, both short and long-term, that could be implemented together or independently to discourage or eliminate the large nuisance bird populations in the previously mentioned locations.

Fiscal Impact

\$100K funded by the General Fund. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

General Fund

836570 - Street Tree Repopulation with an Equity Lens

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

This Project originated as Study Issue DPW 22-04. In February 2021, the Department of Public Works, Parks Division presented an update to the Sustainability Commission on the City's Urban Forest Management Plan (UFMP).

In this presentation, staff noted that there are more than 5,000 empty street tree spaces. The goal of the UFMP is to increase the urban tree canopy to 20.5%. Currently, canopy coverage is at 18.5% (2007 data); achieving the goal of 20.5% would require adding 29,000 new trees. Thus, filling empty tree spaces will be important to achieving this goal. The cost of planning, planting, watering and lifetime trimming of street trees is significant, but results in environmental benefits (e.g., reduced heat island effect, improved air quality, and carbon sequestration). Prioritizing trees in underserved neighborhoods is aligned with Council's Policy Priority of Equity, Access, and Inclusion. This Study Issue aims to ensure the available resources are used to add trees in underserved, low-income neighborhoods, or neighborhoods with the least amount of tree cover.

Project Evaluation and Analysis

The intent of this Study is to develop a strategy/plan for planting trees in the 5,000 vacant tree locations within five years. This strategy/plan would include the following elements:

1. Identify how to fill all 5,000 vacant street tree locations within five years including how to secure the resources required. This would include a cost analysis for:
 - a. Planting trees and establishing them; and
 - b. Ongoing maintenance and operation costs following tree planting. In the past, the responsibility, cost, and logistics of watering newly planted trees has been a barrier for their establishment.
2. Develop a strategy for prioritizing residential areas with lower tree canopy, low-income neighborhoods, multifamily dwellings, and other historically underserved communities."

Fiscal Impact

Funding for the Study would be \$50,000 from the General Fund. Staff estimates that the cost to implement this Study is significant. The Study will develop estimates to implement this type of program including the cost of new trees, planting the trees, installing root barriers, and watering the trees during the first three years of establishment. Additional staff and at least one watering truck may be necessary to maintain the new trees.

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

836630 - Assessment of Needs for Additional Outdoor Sports Programs and Facilities

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

The purpose of this project is to consider current recreation trends and community needs relative to expanded outdoor sports opportunities in Sunnyvale parks, especially pickleball, tennis and cricket. The Study would look at programs and facilities in neighboring cities and engage the Sunnyvale community through surveys and needs assessments, including community outreach meetings, relative to the activities. The Study shall also include current facility use and demand, long-range park capital projects and consider future opportunities and partnerships with the potential to impact land use and service delivery for these emerging recreation needs.

Project Evaluation and Analysis

There are currently no public facilities dedicated to pickleball or cricket within the City of Sunnyvale. While Ortega Park has a public cricket pitch, the fields are predominantly used by youth softball, baseball and soccer, leaving very little availability for cricket play. The recently renovated Fair Oaks Park (synthetic turf field) was striped with multi-functional field lines, including cricket; however, the overall design and shape of the field does not support regulation cricket play or provide a dedicated/permanent pitch. Lakewood Park is scheduled for renovation within the next few years and may provide an opportunity for a dedicated/permanent cricket pitch and/or pickleball courts based on this study and community outreach during the park designing process.

Fiscal Impact

The cost associated with the Study is to hire a consultant to evaluate current and future opportunities and facilities available for tennis, pickleball and cricket relative to community interests/needs and compare to neighboring cities. The level of effort is considered moderate as staff and management will be facilitating public outreach and meeting with the consultant to advise on current practices, current infrastructure and capital plans, as well as various opportunities and challenges at current park resources within the City.

Study will include assessment of potential costs, including capital and operating, as well as revenue opportunities.

836640 - Tree Pruning Backlog

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

This Project originated as Budget Proposal 2023-01. The City's previous tree pruning contract ended in May 2020 and was not renewed due to budgetary constraints related to the COVID-19 pandemic. Specifically, the \$610,000 allocated for annual tree trimming was eliminated as a cost-saving measure. The \$610,000 for annual tree trimming was fully restored with the FY 2022/23 Adopted Budget. Roughly 10,000 trees need to be pruned to eliminate the backlog of two years without a tree contract. The pending tree trimming quote is \$119 per tree and the total cost would be \$1,190,000 in additional funds over two fiscal years.

Project Evaluation and Analysis

This Project would restore the 7-year pruning cycle for the City. It could help mitigate possible limb failures from overgrown trees.

Fiscal Impact

Funding would be provided from the General Fund, Budget Stabilization Fund, the General Fund's primary discretionary reserve.

Funding Sources

General Fund

836830 - Sunnyvale Heritage Museum

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	170 - Finance
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

This project funds \$1.5 million towards construction costs for a proposed a new 1,600 square-foot, single-story addition to the Sunnyvale Heritage Park Museum. The addition will house historical items from the closed Onizuka Air Force Base's "Blue Cube," and would also serve as a research library.

Project Evaluation and Analysis

The Sunnyvale Historic Society and Museum Association (SHSMA) requested the funds, citing difficulty in raising all the funds needed. SHSMA indicated they have obtained an additional \$1 million for exhibit design and installation from outside sources. The project has yet to be designed and staff has not estimated the cost of the expansion.

Fiscal Impact

\$1.5 million in funding is provided through Park Dedication Funds, as the museum qualifies as a recreational facility. The use of these funds is restricted to construction related costs only and cannot be used for materials or supplies related to operations in any way.

Funding Sources

Park Dedication Fund

836960 - Evaluate Feasibility of Dog Off-leash Hours in Select Sunnyvale Park(s)

Originating Year:	2023	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

This study will consider the impact of allowing off-leash dogs during specified hours in City parks. In addition to analyzing the positive benefits of allowing dogs to be off leash, the Study will analyze the potential effect on other park users, such as soccer and little league baseball, the effect on park maintenance and exposure to potential legal liabilities for both the City and residents. The Study will also provide recommendations related to best practices for allowing off-leash dog areas in City parks including a possible pilot project.

Project Evaluation and Analysis

Completion of this Study will provide data to assist in evaluating the feasibility of allowing off-leash dog hours in Sunnyvale parks.

Fiscal Impact

There is no anticipated ongoing operating costs from the study. However, this study may identify potential areas of additional park maintenance.

836970 - Explore the Feasibility of Converting Lots into an Open Green Space Linear Community Park

Originating Year:	2024	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	James Stark

Project Description/Scope/Purpose

The Study would consider what would be needed to open part or all of one to three of the PG&E lots facing Ramona Ave, Lois Ave, and Dona Ave for public access and explore the feasibility of options for their use. This study would coordinate with PG&E to determine the requirements needed for use and hold outreach meetings for impacted residents. The study would do robust neighborhood outreach and survey the neighborhood to determine opinions about what park features, services, and traffic and noise levels would be considered compatible and desirable by neighborhood residents.

Project Evaluation and Analysis

Completion of this Study will provide data to assist in evaluating the feasibility of converting the PG&E lots into a community park (s).

Fiscal Impact

The budget for this project was approved through the FY2024/25 Budget Adoption Process via Budget Supplement No.1 (RTC 24-0493). The Study will include assessment of potential future costs and funding sources for both capital and operating.

837000 - Examine Closure of Trails Surrounding the Wastewater Treatment Ponds for Public Recreation

Originating Year:	2024	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

During the Moffett Park Specific Plan (MPSP) approval process, local environmentalists raised concerns about the potential impact that public access to interior levees around the water treatment plant could have on local wildlife if community use increases with additional development in the area. Based on these environmental concerns, Councilmember Richard Mehlinger requested that staff conduct a study issue to examine the permanent, year-round closure of the water treatment pond interior levees.

Project Evaluation and Analysis

The wastewater treatment pond levees are narrow, low, and in places, fragile. The interior levees have been accessible and used by the public for recreation purposes, however these levees are not designed, intended or designated as public pathways or trails. During fall and winter migration seasons, some waterfowl gather on or near the ponds, levees and other surrounding areas to rest and recover. In the spring and summer, local species nest and raise their young on the levees. In addition to wildlife, the ponds and levees attract bird watchers, pedestrians, and bicycle traffic.

For bicycle and/or pedestrian use, access to the interior levees is not essential, as the adjacent outer levees provide alternative wider, taller, and more robust levees with trails better suited and designed for recreational and commuter access.

Sunnyvale Water Pollution Control Plant staff require 24/7 access to the interior levees. The levees and the treatment ponds are not managed for habitat purposes; they are a critical part of the wastewater treatment operations and are managed accordingly. Use of the interior levees by visitors, birds and other species is incidental. Signage along the interior levees alerts users to the operational use of the ponds and does not invite recreational activity. The City is required to provide public access to the outer levees as a condition of its permit with the Bay Conservation and Development Commission (BCDC). The inner levees are not required to be open to public access.

This Study Issue would examine the permanent closure of public access to the interior levees. It would include public education and engagement relative to the Wastewater Treatment Ponds, the levees, alternative/adjacent recreation options, and the natural environment; presenting findings and alternatives to both the Sustainability and Parks and Recreation Commissions, either jointly or separately, to make a recommendation for City Council consideration.

Fiscal Impact

Implementation costs may include signage and improved facility access controls (e.g., fencing, gates, etc.). An estimate of implementation costs will be completed as part of the study.

837100 - Replacement Water Fountains

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Tracey Gott

Project Description/Scope/Purpose

Replace all old style push bar water fountains with newer filtered water push bar/ bottle filling station water fountains. Fountains would be replaced in the Recreation building, Theatre and Creative Arts buildings at the at the Sunnyvale Community Center as well as the Fremont High School Pool. Nine fountains would be replaced in total. Costs for replacement in ten years have also been added to FY 2035/36.

Project Evaluation and Analysis

Installation of bottle filling water fountains would work toward decreasing the amount of single use plastic water bottles and strengthen the City's no plastic water bottles policy.

Fiscal Impact

There are no ongoing operating impacts anticipated.

837210 - Fun-on-the-Run (FOTR)

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Angela Chan

Project Description/Scope/Purpose

FOTR is a free, mobile recreation program that operates all year round. The vehicle is filled with program equipment and supplies that allows Recreation Services staff to set up recreation activities and interactive games throughout the City at various parks, schools, and other locations.

Current FOTR truck is over 20+ years old. DPW/Fleet is currently researching its replacement since it was on their vehicle replacement schedule this year. When the truck is replaced, we will customize an exterior wrap on the new vehicle to identify it as a City of Sunnyvale program vehicle when it is driven throughout the city. There will also be a one-time interior customization to install lockable drawers and storage appropriate for program supplies that is bolted to the interior so all supplies are secured and safe when the vehicle is moving. The supplies also need to be replaced on a regular schedule due to high usage and constantly being moved, stored and set up.

Project Evaluation and Analysis

FOTR brings activities to youth, ages 6-11, in their neighborhood, either school or local park instead of expecting youth and their families to come to our facilities. Currently, FOTR is a year-round program. When school is in session, the program operates at three Sunnyvale School District elementary schools once a week as an after school recreation program. During school breaks and summer, FOTR is offered in various neighborhoods and parks (i.e. Lakewood, Ponderosa, Columbia, etc.). Program is offered in 2 sessions a day: morning, 9 am to noon and afternoon, 1-4 pm. In FY 2023/24, FOTR served 392 participants and generated over 3,600 participant hours.

Fiscal Impact

No additional operating impact.

837220 - Replacement of Recreation Building Video Projectors and Laptop

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Tracey Gott

Project Description/Scope/Purpose

Replace current aged video projectors with brighter and more current video projectors for use with City, internal, and partner group meetings and events. The project also includes the replacement of the recreation building's PC laptop for use with presentations and media.

Project Evaluation and Analysis

Current video projectors are more than 10-12 years old, with very dull brightness and subpar colors. The purchase of new and current video projectors will greatly improve information dissemination during City, internal, and partner group events. LRS receives requests 3-4 times per month for the use of a laptop/projector. The current laptop used within the Recreation Building is also more than 10 years old and cannot be relied upon in a timely manner due to its extremely slow processing power and age.

Fiscal Impact

Initial purchase of \$8,500 (includes 2 projectors, protective cases for them, and 1 laptop). Items to be added to the recreation miscellaneous equipment replacement list at a frequency of every 5 years. \$42,500 is the estimated 20-year impact.

837340 - VSI Replacement

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Helen Kwan

Project Description/Scope/Purpose

Implementation of replacement recreation management system used by LRS and the public of an off-the-shelf, turn-key configurable recreation management software which will include the ability for recreation program registration and payment as well as facility rental management processing, run standard reports, and the ability to interface on handheld mobile devices.

RFP F25-093

Project Evaluation and Analysis

The City has outgrown its current recreation management software, which no longer meets contemporary standards for usability for both front-end and back-end users. The software lacks adequate functionality and upgradability, leading staff to rely on manual workarounds to access system features and generate reports. Furthermore, the existing software is unable to accommodate essential needs, such as mobile accessibility.

Fiscal Impact

\$293,939 available in replacements funds - additional funding may be required after the RFP process. Current operational cost is \$11,730, which might change after the replacement.

Funding Sources

Technology and Communication Services Fund

837380 - Las Palmas Tennis Court Lighting

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

This project was identified to modernize and upgrade the lighting system at Las Palmas Tennis Center for the tennis courts lighting. The lighting replacement is anticipated to be cost efficient resulting in energy savings. Potential cost savings are dependent on the future kilowatt per hour costs for electricity.

Project Evaluation and Analysis

The current lighting systems are fully operational; however, there isn't a scheduled renovation project for the Las Palmas Tennis Center and the lighting system needs upgrades. There may be potential cost savings in the coming years and the cost and energy savings from this project will not be realized until the upgrades are completed. The project will be reevaluated during the next CIP cycle.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

837390 - Golf Sewer Lines - Sunnyvale Muni GC

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	James Stark

Project Description/Scope/Purpose

This project was created to repair the sewer line from the Sunnyvale Municipal Golf Course main building to the City's sewer system. The sewer line repair will restore proper drainage and wastewater flow from the Sunnyvale Municipal Golf course main building to the City's sewer system. The needed repair will prevent backups and flooding. The repairs will help protect the city's property and infrastructure.

Project Evaluation and Analysis

These repairs are of an urgent nature and delay could result in adverse effects for public health and the environment should the sewer line completely separate from the City's sewer system. The City could also be subject to penalties and fines from regulatory agencies should sewage discharges occur as result of deferring an emergency repair. Delaying can also result in higher repair costs.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

837570 - Skate Park Resurfacing

Originating Year:	2025	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Infrastructure	Project Manager:	Daniel Furton

Project Description/Scope/Purpose

This project will provide an asphalt rehabilitation to the existing Fair Oaks Skate Park. The 1/2 acre Skate Park is located at Fair Oaks Park. The Skate Park opened on May 3, 2003 and has been in continuous use since. The heavily used Skate Park is beginning to have cracks in the surfacing which could affect usage.

The current funds are for resurfacing the asphalt. Staff will review this project during the next CIP cycle to determine if more extensive work is needed and to develop a replacement schedule for future asphalt replacement.

Project Evaluation and Analysis

This project is necessary to maintain existing essential infrastructure and prevent hazardous conditions. Not funding this project would result in deterioration of the skate park, possibly causing large fractures and possibly closure.

Fiscal Impact

By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community parks or recreational facilities. Project funds will be used for the purchase of equipment. Staff costs to implement this project are included in the Department's operating budget. Routine maintenance and operating costs/(savings) will be included in the operating budget.

THIS PAGE IS INTENTIONALLY BLANK

LIBRARY

THIS PAGE IS INTENTIONALLY BLANK

The Sunnyvale Public Library provides a full-service library to meet the community's needs. In addition, the Library strives to provide a balanced collection that represents all points of view. Library services are provided free of charge to library users.

The General Fund primarily funds library projects. In addition, the Library receives State Grant funds to provide specific services to the community.

MAJOR LIBRARY PROJECTS

Lakewood Branch Library Facility. This project will construct a branch library facility at the Lakewood School site. This will increase access to library services for the population living in north Sunnyvale by making it more convenient for residents to visit. The branch library is currently under construction with anticipated completion in FY 2025/26. [More information on this project can be found in the Administrative Facilities section.](#)

Civic Center Phase 2 Planning – Main Library. The Civic Center Master Plan, adopted by the City Council in 2018, included a new Main Library as Phase 2. Library Bond Measure E appeared on the ballot on the November 5, 2024, election and did not reach the necessary two-thirds threshold to pass. City staff is evaluating options for next steps. [More information on this project can be found in the Administrative Facilities section.](#)

CENIC Network Equipment Upgrades. The City was recently awarded grant funding for CENIC network equipment upgrades. Corporation for Education Network Initiatives in California (CENIC) is a public benefit corporation with the goal of bringing high-speed broadband to all California public libraries by connecting them to the California Research and Education Network (CalREN). CalREN is a high-capacity, 8,000-mile fiber-optic network designed to support more than 20 million users. The grant and the City's matching funds will purchase equipment replacements, licenses, support, and maintenance. The upgrades will allow for a bandwidth upgrade from 1 Gbps to 10 Gbps at the Sunnyvale Main Library, and will also benefit students and library users at the new Lakewood branch when it opens in FY 2025/26.

Grant-Funded Library Projects. This section also has several other projects underway. The Library division has been awarded grants for no-cost programs to promote adult literacy, pre-literacy skills, reading readiness, early learning activities, and science and technology-based programming and services to underserved communities.

805150 - Library Foundation Program Grant

Originating Year:	1986	Project Type:	Library	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Michelle Perera

Project Description/Scope/Purpose

This project supports the costs of special projects not supported by the General Fund through the use of State Library Foundation Grant funds. These funds will be used for Lakewood Library and Learning Center startup materials costs.

Project Evaluation and Analysis

This program has been discontinued by the State but if available, any additional funds will be used for Lakewood Library and Learning Center, with completion year planned for FY 2025/26.

Fiscal Impact

The State Library Foundation Grant can only be used to supplement, not supplant, local revenues for basic library services. Spending categories for this project have been approved by the City Council through grant acceptance budget modifications. These funds will be used for the branch library startup costs of materials. No new revenue is expected as the state hasn't funded this in some years.

836680 - Adult Literacy Services

Originating Year:	2023	Project Type:	Library	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Chaunacey Dunklee

Project Description/Scope/Purpose

The goal of the Adult Literacy Services grant is to increase literacy and numeracy skills for Sunnyvale residents who are limited in those arenas. Growing literacy and numeracy skills provides a stronger workforce, as well as a way for people to increase their earning power through promotion. These skills also allow parents to be more involved in their children's education. Because literacy is an essential skill to have - and will only continue to grow in importance - the grant activities will support Sunnyvale residents in a number of ways. Grant period ends 6/30/26.

Project Evaluation and Analysis

To support this goal, Sunnyvale Public Library will provide access to tutors for patrons seeking to improve their literacy. The tutors will be volunteers, which will provide a method of increasing community engagement. The library will also provide materials for low-literacy readers to practice and improve their skills. One casual staff salary will also be funded to support the implementation.

Fiscal Impact

The City Manager applied for, and on May 25, 2023 the City was awarded grant funds in the amount of \$50,000 to the Department of Library and Recreation Services for adult literacy services.

Literacy coordinator was hired in May 2024; the Library was not able to spend all of the additional funding so a second person was also sent to Asilomar.

FY 2024/25 - An FTE mod is in progress to convert current position (casual) to a full-time, term-limited position. An SLA will be submitted to make this a permanent position as of 7/1/25. Costs will be absorbed into the operating budget.

Funding Sources

The California State Library is administering funds for adult literacy services.

836720 - CENIC Network Equipment Upgrades

Originating Year:	2023	Project Type:	Library	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Diana Castro

Project Description/Scope/Purpose	Project Financial Summary			
The City Manager applied for, and on November 29, 2023 the City was awarded grant funds in the amount of \$105,540 to the Department of Library and Recreation Services for CENIC network equipment upgrades.	Project Costs	Revenues	Operating Costs	
	Prior Actual	-	-	-
Corporation for Education Network Initiatives in California (CENIC) is a public benefit corporation with the goal to bring high-speed broadband to all California public libraries by connecting them to the California Research and Education Network (CalREN). CalREN is a high-capacity, 8,000-mile fiber-optic network designed to support more than 20 million users. CENIC has been supported by the California State Library since 2014. In addition to California public libraries, there are over 12,000 sites connecting to CENIC with members from scientific and cultural institutions, private colleges and universities, and research organizations.	2024-25	244,223	105,540	-
	2025-26	-	-	-
The grant funds will be used to purchase equipment replacements for one router, two firewalls, and the first-year connection costs. The new equipment will allow for bandwidth upgrade from 1 Gbps to 10 Gbps at the Sunnyvale Main Library which will significantly increase the current internet speed. The upgrade will also benefit students and library users at the new Lakewood branch when it opens late in 2025. A partnership with local school districts, the upcoming Lakewood branch will provide library and broadband access to one of the few Bay Area communities without another public library within a 3-mile radius.	2026-27	-	-	-
	2027-28	-	-	-
Project Evaluation and Analysis	2028-29	-	-	-
	2029-30	-	-	-
The faster internet connection will vastly improve community access to scholarly databases and electronic resources such as cloudLibrary, Hoopla and Kanopy. The faster internet connection will also support both virtual and in-person library programs that rely on high-speed streaming such as the biweekly ESL Conversation Group and the weekly technology program Get Connected. The Lakewood branch's Makerspace and Creation Lab will also benefit from the upgraded internet speed supporting 3D printing, STEM programs, and patron-initiated content creation. In addition to the community benefits, the bandwidth upgrade will also support environmental sustainability by allowing staff to attend virtual conferences, trainings, and meetings. This alternative option will allow staff to work more efficiently while supporting professional development.	2030-31	-	-	10,866
	2031-32	-	-	10,866
Fiscal Impact	2032-33	-	-	22,219
	2033-34	-	-	22,219
Required Local Match, equipment licenses, support, and maintenance (5 years for router, 7 years for firewalls, and annual for CENIC): \$176,400 (The full cost for the project is \$281,940)	2034-35	-	-	22,219
	2035-36	-	-	22,219
Increased Cost to City Upon Grant Termination: \$22,219 for annual CENIC equipment maintenance from year 2-5, \$43,952 for annual equipment licenses, support and CENIC maintenance for year 6-7.	2036-37	-	-	22,219
	2037-38	-	-	22,219
FY 2024/25 - All annual costs paid in year 1 per ITD due to anticipated cost savings. Budget mod is in progress. Ongoing costs beyond year 5 for the router and year 7 for the firewalls have been added to operating costs in the appropriate years, through 2045.	2038-39	-	-	22,219
	2039-40	-	-	22,219
In FY 2025/26 (Year 2), operational costs for internet will increase from approx. \$9,000 to approx. \$22,000. This difference will be accounted for in the Library operational budget in a new project budget in Phase 2 of budget development.	2040-41	-	-	22,219

836990 - Understand the Effect of the Cost of Digital Materials and Addition of a New Branch Library

Originating Year:	2024	Project Type:	Library	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Garrett Kuramoto

Project Description/Scope/Purpose

The Board of Library Trustees requested that staff conduct a study issue to benchmark Sunnyvale Public Library collections and budget with other Bay Area libraries, to understand the effect the rising cost of digital materials is having, and how the addition of the new Lakewood Branch Library will impact the collection budget.

Project Evaluation and Analysis

Two significant factors are impacting the Sunnyvale Public Library's collection policy and budget:

1. Cost of e-materials: Growth in demand and use of e-materials (e.g., eBooks, audio books, streaming services) has grown significantly, especially during the pandemic. The cost of e-materials is significantly higher than its equivalent analog material. Increasing the availability of e-materials to meet demand means that the library must choose between reducing the budget for traditional books or maintaining a smaller collection of e-materials. This Study will help the Board understand how Sunnyvale's collection of materials and e-materials compares to that of other cities, the impact of the higher cost of e-materials, and the potential impact on the library collections budget.
2. Planned addition of a new branch library: Sunnyvale's first branch library is scheduled to open in 2025. While budget has been set aside for the initial opening, a benchmark study would help update library collections policy and budget to reflect supporting a new branch and to ensure that the collections at the branch library support the community needs. Understanding library collections (number of items in the collections, including e-materials and the budget for each of these collections) in similar Bay Area cities (and in particular, their branches) can help us understand how the Sunnyvale main and future branch libraries are positioned to serve their community relative to other cities and what adjustments might need to be made.

This Study Issue would examine and evaluate the costs of the library collection. It would include collection costs at the Main Library and the new Lakewood Branch Library; presenting findings to the Board of Library Trustees, to potentially make a budget supplement recommendation for City Council consideration.

Fiscal Impact

After study is complete there will be no ongoing costs.

GOVERNANCE AND COMMUNITY ENGAGEMENT

THIS PAGE IS INTENTIONALLY BLANK

GOVERNANCE AND COMMUNITY ENGAGEMENT

The City's goal is to achieve a community in which residents and businesses can effectively shape both their future and the future of their city. Community participation is essential for the City to identify and respond to community concerns and needs, as well as enhance the delivery of municipal services and policy-making processes.

Major projects in this category include City improvement initiatives, studies initiated through the study issues process, and other special projects to assist with the City's policy-making processes. The General Fund primarily funds these projects.

MAJOR GOVERNANCE AND COMMUNITY ENGAGEMENT PROJECTS

General Plan Updates. Pursuant to State requirements, every General Plan must have a minimum of seven "elements" related to the community's physical development. The State requires an annual review of the General Plan, and the Housing Element must be updated at least every eight years. Updates to the Housing, Air Quality, and Noise Elements are in process, with adoption expected in 2023. A comprehensive update to the entire General Plan is anticipated in the next 2-4 years after adopting the Housing Element. This project funds costs associated with these updates across the twenty-year planning period for professional services for technical studies and environmental analysis, publishing costs, and community outreach.

Council Set Aside. This project sets aside \$100,000 annually throughout the twenty-year planning period to be used at the Council's discretion for unplanned projects, services, or other initiatives during the fiscal year.

Climate Action Plan. The City's Climate Action Plan aims to significantly reduce greenhouse gas emissions in line with the City Council's priority of Accelerating Climate Action, the Active Transportation Plan, and the Vision Zero Plan. This project dedicates funding to implementing the Climate Action Playbook as a guide for the City and community in achieving or exceeding the state's 2030 and 2050 greenhouse gas emissions reduction targets. The Playbook includes a Game Plan of "Next Moves," or specific actions, that the City and community can collectively take in the short term to reduce carbon emissions and improve resilience to climate impacts. Planning for the next Game Plan (FY 2024-2028) is also in progress.

Electronic ADA Compliance. The Americans with Disabilities Act (ADA) requires all state and local government agencies to comply by providing accessibility options for people with disabilities. The project brings the City's forward-facing technologies into compliance with the ADA. Due to new federal ADA regulations effective April 24, 2026, all state and local governments with populations over 50,000 must ensure their websites and mobile apps comply with WCAG 2.1 Level AA accessibility standards. The City must review and potentially modify or remove a large volume of online content to meet these standards. Recommendations and training for staff will be needed to maintain ongoing compliance.

Equity, Access, and Inclusion. Funding for this initiative includes an allocation to conduct a [community needs assessment](#) focused on equity, access, and inclusion in Sunnyvale. A

report to the Human Relations Commission detailing equity, access, and inclusion issues identified in the assessment will be presented.

Funds are also allocated for ongoing [equity, access, and inclusion training](#) and support for the City's Equity, Access, and Inclusion program and the Sunnyvale Employees for Equity and Diversity Team. These activities support operationalizing Equity, Access, and Inclusion in the City's day-to-day work.

Community Events & Neighborhood Grants. The mission of the Neighborhood Grant Program is to build community engagement in Sunnyvale and strengthen neighborhood groups. The Community Events Grant Program supports and encourages groups to build community and celebrate our unique culture by holding community events in Sunnyvale. Typically, the City awards \$21,000 in grants for community events and \$13,000 for neighborhood grants annually, while individual grant awards range from \$500 to \$3,500.

Translation of Library & Recreation Services Policy Documents. To provide more equal access to documents and information for all patrons and program participants, beginning FY 2025/26, budget is appropriated for translation of the most-used Recreation and Library Policy and Program documents.

Customer Relationship Management Implementation (Smart City-9). This project will modernize the City's existing Customer Relationship Management system, including developing and integrating a mobile application based on insights from comprehensive market analysis, departmental requirements, and community outreach/engagement. The enhanced system will streamline the management of service requests, offer residents and stakeholders more convenient submission channels, improve overall user experience, and increase transparency in how services are delivered and tracked. Ultimately, this initiative aims to strengthen the City's ability to respond efficiently, consistently, and equitably to community needs.

804201 - City-wide Aerial Photos

Originating Year:	1989	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

Several City departments use aerial photos in support of planning and routine business operations. Public Works uses them for traffic engineering and development project review and design; Public Safety for incident mapping, investigations, and special operations; Community Development for development review and exhibit preparation; Environmental Services for utility facility design, construction, and maintenance; and for various requests and project needs as required.

The City of Sunnyvale partners with neighboring agencies for the update of this important tool, with the City of Mountain View/County of Santa Clara managing the overall project including the Request for Proposal (RFP) process. This partnership is more cost effective and maintains the accuracy, quality, and timeliness of the aerial image.

The accuracy of an aerial photo degrades at approximately three years based on the national municipal average (changes include new development, street, curb, and gutter changes, etc.); however, the trend for redevelopment in the City of Sunnyvale, requires an annual refresh.

In the current cycle, the City has collaborated with the County to improve the quality and frequency of the aerial photos. The County is also leading a .coalition to conduct an RFP for another 5 years of annual aerial photos. The pricing is expected to remain within our budgeted amount for the 5-year cycle, the payment schedule will be determined during the contract negotiations.

Project Evaluation and Analysis

Aerial photography enhances the efficiency of land use, transportation, and public safety planning and design. Service levels for these functions would decline if less efficient field review, case by case photography, or private consulting services were substituted.

Fiscal Impact

The City is paying a percentage based on Sunnyvale's square miles within the total square miles of all participating agencies. The long term cost savings and more frequent imagery will be an ongoing benefit to the City. This will be re-assessed in year four of the five year contract.

814952 - Redevelopment Dissolution

Originating Year:	2012	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

This project provides funding for issues related to the implementation of the Redevelopment Dissolution Act. Under the Dissolution Act, redevelopment agencies were dissolved as of February 1, 2012. The City, serving as the Redevelopment Successor Agency, is unwinding the affairs of the former Redevelopment Agency (RDA). Technical and outside legal counsel services will be required, particularly in the transfer of the former RDA land assets.

Project Evaluation and Analysis

Staff to look at all RDA related cost centers and determine the best way to allocate and account for these costs moving forward.

Fiscal Impact

This project is funded by the former tax increment funds as an approved enforceable obligation. Funds are received as a property tax reimbursement allotted by the County. Funds will be allocated as needed in upcoming fiscal years.

Funding Sources

RDA Successor Agency Trust Fund

Plans and Goals

824571 - Project Management for Town Center Development Agreement

Originating Year:	2012	Project Type:	Governance and Community Engagement	Department:	110 - Office of the City Attorney
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Rebecca Moon

Project Description/Scope/Purpose

The Redevelopment Successor Agency of the City of Sunnyvale was established February 1, 2012. The primary activity of the Successor Agency is to assist in winding down the affairs of the former Redevelopment Agency.

In 2004, the Redevelopment Agency approved a Disposition and Development Agreement for development of the Town Center project. The original developer defaulted on dates for starting construction of the project and the Agency engaged in negotiations with a substitute developer to take over the project. The Redevelopment Agency entered into an Amended and Restated Disposition and Development and Owner Participation Agreement (ADDOPA) with a new developer in 2007. However, the developer defaulted on the loan in 2009. The Successor Agency is now working with a new developer under the terms of the 2016 Modified and Restated Amended Disposition and Development and Owner Participation Agreement (2016 MRADDOPA).

Project Evaluation and Analysis

All costs associated with monitoring and administering the rights and obligations under the 2016 MRADDOPA will be funded in this project, except litigation fees.

Fiscal Impact

This project is funded by the former tax increment funds as an approved enforceable obligation. Funds are received as a property tax reimbursement allotted by the County.

Funding Sources

RDA Successor Agency Trust Fund

Plans and Goals

825400 - Update of Standard Specifications and Details

Originating Year:	2006	Project Type:	Governance and Community Engagement	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project provides review and update of the Sunnyvale Public Works Standard Specifications and standard details every ten years with funding for minor updates in other years. These specifications, which were last updated in FY 2014/15, but have had various updates since, provide guidelines for all public improvements, whether installed by the City or developers. Due to project priorities and deadlines, the next major revision will occur in FY 2026/27.

Project Evaluation and Analysis

Per Municipal Code Section 18.12.020, all improvements shall conform to standard specifications, designs and details as prepared by the administrative staff and approved by the City Council, or in the event no official or standard plan, specification, design, detail or regulation has been adopted by the City regarding the installation of a particular improvement, then the improvement shall conform to the plan, specification, design, detail or regulation set forth by the administrative staff and approved by the City Council. These specifications establish the standard under which the City derives certain immunities from liability.

Fiscal Impact

This project is funded 25% each by the Water Supply and Distribution Fund, Wastewater Management Fund, Gas Tax Fund, and General Fund.

Funding Sources

Water Supply and Distribution Fund 25%; Wastewater Management Fund 25%; Gas Tax Fund 25%; General Fund 25%

825700 - General Plan Updates

Originating Year:	2005	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

The State of California mandates the preparation and periodic update of a General Plan that includes, at a minimum, seven "elements" related to the physical development of the community. The General Plan updates are required to ensure that the plan reflects current conditions and goals of the community. The Land Use and Transportation Element was updated in 2017. Updates to the Air Quality and Noise elements were completed in July 2023. A comprehensive update to the entire General Plan is anticipated in the next 2-4 years after adoption of the Housing Element in December 2023. This special project funds a portion of the costs associated with the General Plan updates (generally professional services for technical studies and environmental analysis, community outreach expenses, publishing expenses, etc.). The Housing Element is the only element with a specific eight year update cycle prescribed by the State. Special projects may be proposed separately for updates particularly if grants are awarded. Recent state legislation has also required Cities to update their Open Space Elements.

Funds in FY 2021/22 are for the current update and additional funds in FY 2029/30 are for the next eight year update to the Housing element. Funds for a comprehensive update to the entire General Plan are planned for that timeframe. Other minor General Plan updates, as directed by City Council or state law, may occur between ongoing.

Project Evaluation and Analysis

The State requires an annual review of the General Plan (accomplished through Community Condition Indicators and staff review) as well as annual reporting to the State. Further, the State suggests a comprehensive review (not necessarily requiring an update) every five years. This project will help fund comprehensive updates every ten years (except for Housing which is eight years) and interim updates of specific elements until all elements (except the Housing Element) are on the same schedule. Comprehensive updates are expected to extend over a two-year period and include analysis of impacts to the community for air quality and noise, taking into account the changes in the Land Use and Transportation element from the prior document. Additional consideration will need to be given to the Climate Action Plan to make it a qualifying plan to help expedite the environmental review process.

Fiscal Impact

Because the General Plan applies to almost all of the city services, it is appropriate that the updates are funded from a variety of revenue sources. One such source from the General Fund is the General Plan Maintenance fee, which is recovered through development fees and other revenue sources. The Housing Mitigation Fund is also an appropriate funding source as the Housing Element has a state required update mandate (every 5-8 years). Funding sources would cover consultant services for community outreach, development of updates to the general plan, needed studies and environmental review.

Funding Sources

80% General Fund and approximately 20% funded by the Housing Mitigation Fund

Plans and Goals

LT - Land Use and Transportation - LT-1: Coordinated Regional and Local Planning

829630 - Council Set Aside

Originating Year:	2013	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

This project sets aside \$100,000 annually throughout the General Fund twenty-year planning period for unplanned projects, services, or other initiatives that come up over the course of the fiscal year.

Project Evaluation and Analysis

The Council Service Level Set Aside is re-established at \$100,000/year in the General Fund's Long Term Financial Plan. This set aside can be used at Council's discretion with majority approval to provide funding for initiatives that were otherwise unbudgeted.

Fiscal Impact

This project is funded by the General Fund as a \$100,000 appropriation that can be used annually. When Council approves an initiative to be funded from this set aside, the annual project budget may be reduced to add the appropriation for the newly funded initiative. Unused funds are generally not carried to subsequent fiscal years without Council direction.

Funding Sources

General Fund

830521 - ERP System Acquisition, Implementation, and Support

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Sarah Johnson-Rios

Project Description/Scope/Purpose

This project provides funding to replace the City's aging financial, human resources and payroll systems with a modern Enterprise Resource Planning (ERP) system. Additionally, the project includes funding to replace the City's legacy budget system and manual cash registers with software integrated to ERP. These enhancements will allow for business process modernization, provide real-time access to data, and improve the ability of City staff to respond to the needs of residents. Project funds will be combined with existing funds in the IT Replacement Schedule to provide for the purchase, technical assistance and internal staff support required for system implementation.

The ERP system implementation is underway, with Phase I (Financials Management, Purchasing, & Projects/Grants) live in February 2021 and completion of Phase II (Human Capital Management, includes HR & Payroll) completed in January 2024. The cashiering system went live in February 2021, and rolled out at the City's OneStop Permit Center in October 2022. Additional locations are anticipated in FY 2022/23.

The Learning module has been implemented and the project is now working on the implementation of the Performance module, which is scheduled to complete in FY2025/26. The final phase of the project is to build an archived system for legacy data retrieval and reporting.

Project Evaluation and Analysis

This project upgrades the City's legacy budget, financial, cashiering, HR and payroll systems, which are not able to integrate with other systems and difficult to produce reports and extract data. The magnitude of a project to replace the City's central business systems is significant. To ensure a successful implementation and avoid impacts to daily operations, the City is dedicating experienced staff to the project and providing staffing backfill to cover operational tasks. The City has also secured professional implementation services from both product vendors and outside consultants, as specialized expertise in the set-up, data conversion and installation of these types of large systems is critical.

Fiscal Impact

The project initial budget was \$18.4 million, received additional \$1,471,501 from FY2021/22 year-end savings to cover extended timeline for rollout 2 implementation. Subsequent system renewals and upgrades are scheduled on a ten-year cycle. System replacement is scheduled in FY2041/42, both will be funded by the General Services – Technology and Communications Fund. Operating costs for software have been incorporated into Information Technology Department's budget.

831290 - Climate Action Plan Implementation

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	270 - Environmental Services
Planned Completion Year:	2027/28	Category:	Special	Project Manager:	Madeline Khair

Project Description/Scope/Purpose

This project supports the City’s Climate Action Plan (CAP) to significantly reduce community greenhouse gas (GHG) emissions. In 2019, the City adopted the Climate Action Playbook (CAP 2.0), outlining strategies and specific “Next Moves” to reduce emissions and strengthen climate resilience. The Playbook is updated every five years to reflect evolving regulations, technologies, and community needs. Game Plan 2023, extended due to COVID-19, delivered key initiatives such as the Drive Electric and Cool Cooktops Programs, Reach Codes, and the Climate Action Scoreboard—advancing clean energy, building electrification, and community engagement. This project also funds ongoing Playbook updates. Game Plan 2028, adopted in June 2024, includes 66 “Moves,” with 33 new actions focused on electrifying buildings and transportation from FY 2024/25 through FY 2027/28.

Project Evaluation and Analysis

Some Playbook initiatives have been integrated into existing departmental operating or project budgets (e.g., Active Transportation Projects and Green Stormwater Infrastructure). One-time costs in this project cover consultant services, temporary staffing, and outreach materials. Funding has supported new programs promoting building electrification, zero-emission vehicle transitions, and community engagement tools to track climate action progress. Game Plan 2028 will now run through FY 2027/28.

Fiscal Impact

While this project is currently funded by the General Fund, the City will continue to evaluate a variety of strategies to fund the implementation of the Playbook. Implementation funds will extend from FY 2024/25 through FY 2027/28 by reprogramming funds to different years. This will allow for completion of Moves that may be delayed due to lack of staffing or other constraints during the implementation of Game Plan 2028.

831310 - Minimum Wage Enforcement Agreement

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Christine Velasquez

Project Description/Scope/Purpose

This project will fund minimum wage enforcement services to be provided by the City of San Jose Office of Equality Assurance. Services will be provided in response to employee complaints regarding not receiving the current Sunnyvale minimum rate while working in Sunnyvale. Services to be provided include complaint investigations; informal resolution of complaints; receiving and distributing restitution checks for affected employees, and other services as needed to resolve employee complaints.

Project Evaluation and Analysis

The City's new minimum wage rate differs from the current State minimum wage rate. Therefore, Sunnyvale must enforce the minimum wage rates that went into effect on July 1, 2016 and thereafter. Since Sunnyvale does not have the staffing resources to manage enforcement, Council approved funding for outsourcing those services.

Fiscal Impact

The project will be funded at \$15,000 annually for the entire duration of the 5-year contract with the City of San Jose by the General Fund. This agreement was evaluated during the fifth year to determine whether or not an extension will be required.

The current contract expires June 30, 2025. Sunnyvale will not be renewing with the City of San Jose Office of Equality Assurance due to the significant cost increase quoted (\$28k/year vs. current cost of \$15k/year). Compliance administration will be brought in-house and reevaluated in FY25-26 and FY26-27.

831320 - RDA Counsel Fees

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	110 - Office of the City Attorney
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Rebecca Moon

Project Description/Scope/Purpose

All costs are associated with continuing legal costs related to Successor Agency litigation concerning redevelopment dissolution issues.

Project Evaluation and Analysis

Successor Agency litigation is now included in Fund 315-500 – RDA Successor Agency Trust Fund– Redevelopment Obligation Retirement Fund; the Administrative Costs (line item 9) of the Recognized Obligation Payment Schedule (ROPS) allows repayment of legal costs. This project would fund litigation if the costs exceed the cap on the ROPS or the City is unable to recover costs from the State.

Fiscal Impact

This project is funded by the General Fund.

831490 - Website Upgrades

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jennifer Garnett

Project Description/Scope/Purpose

The project provides funding for periodic evaluation to ensure the City's primary web presence maintains up-to-date technology and functionality to enhance community engagement.

Project Evaluation and Analysis

The City's website serves as the main channel for communication with and access to services for the community. For the site to remain secure and keep pace with technology, periodic updates and enhancements are needed.

Fiscal Impact

Ongoing maintenance and hosting costs for the City's website are part of ITD's operating budget. This project allocates funding for periodic site redesigns and system updates. The most recent Content Management System update occurred in May 2022. The next anticipated redesign is scheduled for 2028 and would be evaluated every subsequent 5 years.

831650 - ADA Transition Plan & Self-Evaluation

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Connie Verceles

Project Description/Scope/Purpose

The City's Americans with Disabilities Act (ADA) Transition Plan & Self-Evaluation identifies ADA compliance issues and recommendations for remediation. The City uses the Plan to track progress towards full ADA compliance. The Plan has two components: (1) the ADA Transition Plan, which identifies and prioritizes ADA deficiencies in the City's physical infrastructure (facilities, parks, sidewalks and rights-of-way); and (2) the Self-Evaluation, which identifies ADA-related barriers in the City's programs, policies, and procedures.

The Plan needs to be periodically updated to reflect current standards and practices. It re-evaluates citywide needs and funding requirements. The Plan will use existing information and new surveys to determine the required levels of improvement and timeframes.

The most recent ADA Transition Plan & Self-Evaluation was last completed in FY2022/23.

Project Evaluation and Analysis

An up-to-date Transition Plan & Self-Evaluation will allow the City to align funds with ADA needs throughout the City.

Fiscal Impact

This project is funded by the General Fund. Updates will be required every 10 years as the City completes projects and to reflect ADA priorities.

831890 - Information Technology - Risk Assessment

Originating Year:	2017	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

This project provides for a risk assessment every two years based on a recommendation of the National Institute of Standards and Technology (NIST) best practices. A comprehensive IT risk assessment is recommended to help identify the risks to the delivery of IT services and the accuracy and integrity of the City's financial and personnel data.

With the recent implementation of the Security Operations Center (SOC) and with the advent of the Emergency Operations Center (EOC) and Civic Center, the City needs to conduct a risk assessment to validate secure operations. The City's IT environment has continued to change. The City had expanded cloud-based applications , which encompasses multiple locations citywide and must ensure its security. IT has migrated 95% of systems to a secured co-location facility with a Disaster Recovery system located in another state. New multiprotocol label switching (MPLS) circuits have been implemented between the City's main campus to the co-location facility for network traffic. In addition, IT has deployed next generation firewalls which also include VPN services and web filtering.

Project Evaluation and Analysis

These regular assessments will identify possible risks to the City IT Department, the delivery of IT services, and the accuracy and integrity of the City financial and personnel data. Additionally, risk assessments will quantify the likelihood of an event, the impact of the event, and identify mitigating controls that address the possible risk. Without risk assessments, the City lacks the information to prepare against events targeting City data.

Fiscal Impact

Recommendations from a risk assessment may result in additional costs; for example, facilities costs related to building security, labor costs related to changes in policies and/or procedures, or capital costs related to technology equipment, software or tools.

832270 - Permitting System Replacement

Originating Year:	2016	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

The Departments of Community Development (Building, Planning), Public Works (Engineering) and Public Safety (Neighborhood Preservation, Fire Prevention) use the City's permitting system for accepting, tracking and issuing development permits, tracking code compliance cases, recording related inspections, and calculating related fees. City staff developed the previous system in-house over twenty years ago, using now obsolete software development tools and methodologies.

The replacement system allows staff to efficiently and intuitively input and retrieve permit data. It is adaptable and expandable to accommodate future trends in plan checking and inspection services, such as web-based plan submissions, electronic plan checks, and remote access for data input via mobile devices. The system meets City requirements for fee documentation, collection, and auditing purposes, and interfaces with the City's Geographic Information Systems and online permit programs. To the extent feasible, it includes the capability of tracking and coordinating permits for related Economic Development, Housing and Environmental Services functions.

The project successfully went live October 2022.

Due to stability issues with the vendor and the vendor (Tyler) continuing to make module and environment changes, the post go-live has been extended; no additional funding need is anticipated for FY25-26.

Project Evaluation and Analysis

Replacement of the existing permitting system was necessary. The technology behind it was obsolete and could no longer be supported in a cost effective manner, which means it would eventually become unusable. The first phase of this project was documentation and evaluation of related business processes to ensure the City follows best practices and effectively using its limited resources, and also was to develop the appropriate requirements and needs specifications to evaluate potential replacement solutions. As part of this evaluation, the feasibility of the desired functions and capabilities refined the project scope. The project timeline included roughly 26 to 32 months for acquisition, detail design, application development, beta testing, design correction and final rollout. The replacement system is now live. This project is in phase two, the post go-live support phase, which will go into FY 2025/26.

Fiscal Impact

The permit system, replacement, and maintenance is funded by the Technology Surcharge charged to development activity, such as building permits, plan check, etc. and is accounted for in the General Services - Technology and Communications Fund. Additional funding needs are supplemented by the Development Enterprise Fund through cost recovery fees. Ongoing costs for software and staffing have been incorporated into department operating budgets as of FY 2023/24. Additional staffing and electronic storage needs are being assessed for inclusion in the next operating budget cycle.

Replacement of Software as a Service is scheduled on a ten-year cycle. Subsequent system upgrades and replacements will be funded by the General Services - Technology and Communications Fund and the Development Enterprise fund.

832380 - Iizuka Sister City Engagement Funding

Originating Year:	2018	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Outside Group Funding	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

In November 2013, the Council approved a Friendly Exchange Relations (FER) Agreement with the City of Iizuka, Japan. In December 2016, this relationship was upgraded to a formal Sister City relationship. The Sister Cities International Agreement between the City of Sunnyvale and Iizuka was formalized on December 1, 2016. In June 2016, the Council authorized one-time funding to support the relationship and in May 2018, approved funding in the amount of \$12,500 annually for a period of three years. These funds were to be earmarked for activities outlined in RTC 18-0147.

Funding requests for \$12,500 in each of FY 2024/25 and FY 2025/26 have been approved. The program will end in FY 2025/26 unless extended.

This project will provide financial assistance to two low-income Sunnyvale students to travel to Iizuka through the Sunnyvale Sister City Association (SSCA) student exchange program (\$2,000/student). With the City's support, four Sunnyvale students will receive financial assistance each year; two covered by SSCA, and two by the City of Sunnyvale. This will also provide gifts to Iizuka leaders during exchanges, to students participating in the exchange program or any other special occasion, as a reciprocal gesture of friendship,

Project Evaluation and Analysis

SSCA, a local non-profit organization focused on promoting, strengthening and expanding the sister city relationship between Sunnyvale and Iizuka, has continued to be a key community partner. Since 2013, SSCA has coordinated programs and special events to help increase community engagement in Sunnyvale and celebrate the sister city relationship. SSCA has also continued to provide input to staff on how funding from the City could be implemented and where it would be most beneficial.

A consistent source of funding allows the City to continue to engage in activities with SSCA and the City of Iizuka. Financial support helps build the capacity for SSCA to maintain and grow their programs and allow the City to contribute to other activities to help build on the relationship with Iizuka that has been growing over the past few years.

Fiscal Impact

The program will end in FY 2025/26 unless extended.

A Special Agreement between the City and Sunnyvale Sister City Association (SSCA) was also approved (RTC18-0117) to allow limited free use of city facilities in exchange for SSCA's efforts to promote strong relationships with Iizuka.

832640 - Climate Action Plan and Green Building Updates

Originating Year:	2018	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

The City adopted Climate Action Plan (CAP) outlines a number of goals to address climate change and reduce greenhouse gas emissions. The CAP is updated every 2-3 years to account for changes in State legislation and emission targets. These targets are also incorporated into our Municipal Code (Green Building Code) for consistency with the CAP and other State mandated Building Code changes. These targets are also developed to be consistent with the Land Use and Transportation Element (LUTE) of the General Plan.

Project Evaluation and Analysis

Updates to the CAP help the City achieve its greenhouse emissions goals through adopted goals and policies in the CAP. This not only affects air quality and noise but also affects electrical, potable and sanitary sewer usage and disposal.

Fiscal Impact

The project has been delayed due to staffing issues and City staff plan to reach out to consultants in FY 25/26.

Funding Sources

General Fund

832660 - Economic Development Strategy

Originating Year:	2018	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Christine Velasquez

Project Description/Scope/Purpose

Review the City's existing economic development goals, strategies and work program; assess economic developments after the Great Recession and current economic conditions; engage the business community and residents in the development of economic development strategies and goals; and deliver economic strategies, goals and work plan which will guide the City for the next five to ten years. Additionally, the scope includes identifying market trends, development limitations, and policy constraints to recommend possible solutions.

Project Evaluation and Analysis

The project will evaluate a "best practices" comparison of the City's current economic development goals, strategies, tools and resources with economic development incentives and activities in comparable cities noted for their successful economic development approaches and programs. The completed strategy will recommend prioritization of the City's economic development efforts and resources for the next five to ten years and measurable annual objectives.

Fiscal Impact

The estimated total cost is a one-time expenditure of \$100,000. The completed strategy may recommend one-time or ongoing expenditures that are outside of the current service levels and if the City opts to implement the recommendation, it will require investment of additional resources.

832670 - Sunnyvale Redistricting

Originating Year:	2018	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Connie Verceles

Project Description/Scope/Purpose

Sunnyvale voters adopted a 6-district Council election system with a directly-elected Mayor on March 3, 2020 per Measure B. Council placed Measure B on the ballot after a robust community engagement process. Community members also designed the Council district map. District-based elections alternate between even and odd districts for each election. Voters in even districts elected a Council representative beginning in November 2020, along with all Sunnyvale voters electing a Mayor. Voters in odd districts elected a Council representative beginning in November 2022.

All jurisdictions with district-based elections must redistrict after every decennial census. This ensures districts are population balanced. Funds will be used to provide community training on redistricting, provide community training on map drawing, manage and work with community on Maptitude submissions, present viable district map options, attend all committee meetings and hearings, support on marketing/education strategy, graphic support for social media/flyers/presentations/handouts, and support at community workshops and pop-up events.

Project Evaluation and Analysis

Section 601 of the City of Sunnyvale Charter provided that council members were to be elected on an at-large basis to seven numbered seats. Cities throughout the state faced legal challenges to at-large systems of electing city council members under the California Voting Rights Act (CVRA). Therefore, the City Council conducted public outreach and education regarding the California Voting Rights Act (CVRA) and switched to district-based City Council elections. The measure to amend the City Charter to allow for district-based elections passed on March 3, 2020. Jurisdictions with district-based election systems must re-draw their district boundaries after each census. This ensures that population counts within each district remain relatively equal.

Fiscal Impact

Initial project costs were to educate the public about CVRA, district-based elections, the ballot measure, and to draw district maps prior to the passage of Measure B in March 2020. Future funding is programmed every ten years for redistricting after the census as required.

Funding Sources

General Fund

834240 - Digital Literacy

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Damon Sparacino

Project Description/Scope/Purpose

Columbia Neighborhood Center (CNC) will deliver between 8-12 hours of digital literacy training for an estimated 650 low-income Latino parents/guardians with children enrolled in six Sunnyvale Elementary School District schools: Bishop, Columbia, Ellis, Lakewood, San Miguel, and Vargas schools. The trainings will take place at these schools and the trainings will be delivered by a contracted vendor. Grant funds will support the purchase of an internet-enabled device (i.e., a netbook) for each participant that successfully completes the training. The goal of the project is to provide "digitally excluded" adults with the basic skills that they need to solve daily problems in their lives. Parents enrolled in the program will also be assisted to enroll in Comcast's Internet Essentials program, which enables adults that are in good standing with Comcast to receive high-speed internet at \$10 a month.

Project Evaluation and Analysis

The evaluation of the project has two parts: the number of adults that successfully complete the training and the number of families that enroll in the Comcast Internet Essentials program.

Fiscal Impact

The grant is funded on a reimbursable basis, such that the City will need to accrue the costs of administering the program and then submit receipts to California Public Utilities Commission (CA PUC) for reimbursement.

Ramp Up (first 6 months) and Year 1 (through June 2020) reports have been completed, reviewed, and approved by CPUC. Ramp Up expenditures (\$16,830) have been reimbursed by CPUC. Year 1 expenditures (\$89,778) have been approved for payment and as of November 2020, CPUC is processing payment to City.

In-kind match as required in this program is fulfilled by full-time city staff's time to support the program. In-kind staff includes Youth and Family Resource Manager, Recreation Coordinator II, and Senior Office Assistant.

Funding Sources

California Public Utilities Commission grant received in the General Fund

834260 - Cost of Service Study For City Fees

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Nancy Grove

Project Description/Scope/Purpose

The project will consist of selecting a consulting firm to conduct a study to provide the City with a comprehensive report for evaluation of the cost of service relationships between City fees and service activities across all departments. The first phase is underway and includes evaluating developments fees, such as Planning, Building and Safety, Engineering, and Fire Protection Engineering. The development fee study is expected to be finalized by year end 2026. The second phase will include selecting a group of major fees in the General Fund for evaluation with funding included in FY 2026/27. Additional funding for cyclical updates have also been programmed across the twenty years.

The results of these studies will provide a tool for understanding current service levels, the cost and demand for those services, and what fees for service can and should be charged. By analyzing direct costs, departmental overhead costs, citywide head costs, and supporting department review costs, the City will re-examine its current fee structure to ensure accuracy in its mandate/goal to achieve 100% cost recovery.

Project Evaluation and Analysis

The City has not comprehensively evaluated its general fees or development fees for several years and current fees may not be at full cost recovery. There have also been significant changes in technology, business processes, etc. in the last few years. Additionally, the study will evaluate the cost of service for service level categories to ensure that the fees are aligned to the level of effort to provide the service. This will promote equity across the various fees.

Utility rates and Recreation fees are not included in this project due to separate cost of service analyses.

Fiscal Impact

The first phase will study development fees and is funded by the Development Enterprise Fund. The second phase will be funded by the General Fund. It is anticipated that the results of these studies will bring fees in line with costs to ensure fiscal sustainability.

834430 - Electronic Records Management System

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	David Carnahan

Project Description/Scope/Purpose

This is the second phase of the citywide project to procure and implement a comprehensive Electronic Records Management System (ERM) to align with Council's priority of "Improved Processes and Services through the Use of Technology." The ERM will serve as an official citywide electronic repository of City records.

Project Evaluation and Analysis

Records management is an essential function of municipalities as such, it is on the forefront of the City's operations; however, the City does not have an ERM currently and records management functions are still mostly paper-based. The implementation of the ERM will enhance staff's ability to archive and recover records, improve day-to-day management of City generated records, and automate the records retention and destruction schedule.

Fiscal Impact

General Fund and Enterprise Funds share the cost as appropriate based on the records scanned into the system and the number of user licenses requested by each department. Ongoing operating costs are expected for software licensing. Ongoing operating costs will be shown in the Operating budget for the Information Technology Department.

Funding Sources

834440 - Organizational Development

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Sarah Johnson-Rios

Project Description/Scope/Purpose

Evaluate organizational culture and implement improvements based on consultant recommendations to the City's Executive Leadership Team. The project funds the implementation of organizational advancement initiatives that align with the City Manager's vision including but not limited to initiatives identified by consultant, staff and extracurricular activities.

Project Evaluation and Analysis

Organizational improvement is a focus embraced by the current City Manager. The Office of the City Manager is continuously working to evaluate the existing organizational culture and provide recommendations that will facilitate developing a continuous learning organization. Enhanced organizational culture and processes will help the City become more efficient and effective. It will also help with attracting and retaining talent.

Fiscal Impact

One-time budget of \$60,000 + \$60,000 additional in March 2024. With the FY25 Budget Supplement 2 (2B.3), Organizational Development funding was approved from one-time funding to annual, ongoing funding. This provides resources to continue the City's efforts to innovate, evolve, and engage employees in furthering the City's mission to build community trust by delivering exceptional services over the long-term.

834560 - GIS Onetime Support

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

This project is to retain a consultant to make the City's enterprise Geographic Information Systems (GIS) platform current, implement new data layers, conduct data mapping, and provide GIS solutions that can be continuously maintained by the City.

ITD will implement essential GIS platform needs, including: upgrading the ESRI platform and licenses to the latest version, move components into the cloud, implement a shared portal and self-service mapping, configure public and internal map galleries, configure the external GIS Viewer, provide training on new software, and update the GIS Strategic Plan. Additional work planned will meet the following departmental needs: update GIS maps within the Computer Aided Dispatch (CAD) system with enterprise GIS data; improve parcel and street data integration to the County; add digital documentation for use within GIS Viewer and link relevant documents such as Pre-Fire plans for DPS; provide a visual representation for code enforcement (complaint locations, etc.); update critical data layers; and update CAD with parcel point data rather than County basemaps.

ITD will implement essential platform needs, including: migrating desktop users to new software, providing training on new software, configuring internal GIS Viewer, and creating a master address database. Additional work planned will meet the following departmental needs: deploy ESRI Emergency Management mapping templates (situation awareness, etc.), workforce map information (commute/travel times, etc.), and enable DPS field staff to view GIS asset information, link scanned drawings, etc.; update data layers to improve intersection data; create self-service web/mobile maps for DPS (hazard vulnerability, evacuation, road closures, etc.); expand data in the parks viewer for LCS (park amenities, event details, etc.) and create public maps; add distance measures (from liquor stores to schools), links to tract maps, assessor maps, etc.; display historical trends, parcels and permits via maps and create web/mobile maps for the public; and update important data layers (health clinics, housing resource locations, etc.) for CDD.

The data currency that is required for land/parcel management in a GIS environment and is needed by the new permitting system, including improved maintenance processes and data structures, will be addressed by this project.

The project continues to remain on hold due to consequential upgrades to the City's GIS environment being driven by other projects, including Permitting (post go-live) and CAD; no funding increases are anticipated for FY 2025-26.

Project Evaluation and Analysis

This project aims to greatly improve the accuracy and reliability of the City's GIS mapping, data analysis via map visualizations and which will improve the efficiency of our public safety, land management and community services. The project will be evaluated based on the current Information Technology Department (ITD) workload indicator (number of GIS data sets available to the public). After each year, the progress of the project will be evaluated and adjusted with an updated list of tasks to be completed, timeline and budget based on department needs and resource availability citywide.

Fiscal Impact

This project is funded by the General Fund with some funds specific to the permitting project from the Development Enterprise fund. The ongoing costs are planned for software licenses funded by internal service charges.

Funding Sources

General Fund and Development Enterprise Fund.

834600 - Microsoft Server OS and SQL Server Upgrade

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

The City must purchase the software licenses needed to update the City's Microsoft Windows Server Operating Systems (OS) and Structured Query Language (SQL) Servers. The updated OS licenses will enable the City to continue running supported licensed software on its server supported client devices. Likewise, the upgraded SQL licenses will allow the City to continue communicating with and manipulating its server supported databases. These updates must take place prior to the end of support, which is when Microsoft will no longer support the City's current OS and SQL servers. Without the upgrades, the City will be susceptible to cyber security threats and will not be able to effectively support new software applications and databases. In addition, \$825,000 of consulting/professional services and backfill for staff will be required to upgrade and migrate existing applications to remain in compliance with security and Microsoft support. The project has upgraded all the 2008 server licenses. The OS 2012 licenses are currently being upgraded.

Project will be completed before the fiscal year end FY2024-25 but this an on-going project.

Project Evaluation and Analysis

Evaluated based on the related performance measures involving network security.

Once all server OS and SQL license updates are completed, the cost for subsequent updates will be included in the Technology Replacement Fund per a nine year replacement cycle as dictated by Microsoft's ten year cut off and approved by IT Steering. However, due to the planning and resources needed per update, subsequent updates are budgeted for every nine years within this project.

Microsoft is cycling the server version service for five years and is allowing an additional five years of security support. We must plan to replace and upgrade at least every ten years. SQL server will be available for ten years with no additional security support beyond the ten years.

Fiscal Impact

The cost for future OS upgrades will decrease as the City continues applying a "cloud first" strategy and moving away from maintaining servers and on-premise applications. However, there are many variables in play, so the rate of decrease is unknown and as such, the cost for future upgrades is estimated at the same amount with the potential to be reduced once more information is gathered.

Funding Sources

Technology and Communication Services Fund

834640 - Interactive Voice Response (IVR) for Utility Billing Call Center

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

This project will provide Interactive Voice Response (IVR) technology to the utility billing call center. IVR enables customers to obtain basic account information and pay the bills by phone without speaking to a customer service representative. This technology could potentially be provided by our current electronic bill presentment and payment (EBPP) vendor.

Project Evaluation and Analysis

IVR is commonly available among municipal and private utilities. The implementation of an IVR solution would provide quick information and payment access for customers and would potentially reduce hold times at the call center. Customers would still need to speak with customer service to place other, more detailed requests such as work orders or complex billing inquiries. It is expected that there will be initial setup charges plus a charge per transaction (similar to our current EBPP pricing structure). Budgeted amounts are based on current pricing for IVR through our EBPP vendor.

Fiscal Impact

There will be ongoing operating costs related to the IVR service. These costs are currently reflected in the operating budget for the Utility Billing division, and are updated every two years. Staff levels will remain unchanged, but existing staff will be able to provide faster customer service as a result of this project.

Funding Sources

All costs for this project are split evenly between the Water Supply and Distribution Fund, Wastewater Management Fund, and Solid Waste Management Fund.

Plans and Goals

834730 - Public Facilities Impact Fee Study

Originating Year:	2019	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

The purpose of this study is to evaluate the impact of a new development in relation to the existing public facility infrastructure and to determine the public facility capacity needed to meet demands generated by the new development. The study will also provide analysis of imposing a public facilities impact fee, including an assessment of the cost/benefit relationship to new development, the cost of providing facilities as well as the same level of service to new development as provided to existing users, and a proposed methodology to apportion the cost to various beneficiaries.

Project Evaluation and Analysis

The imposition of impact fees is an important method of mitigating the impact of future development on public facilities. As development occurs, the city may need to expand, construct, and maintain existing and additional public facilities, and make adjustments to equipment needed to maintain its existing standards for an increasing service population.

Fiscal Impact

The proposed project is a study only. The City will engage a consultant to work collaboratively with staff. The project may result in additional fiscal impacts, depending on the outcome of the study.

834790 - Addition to the Heritage Resource Inventory of Sites Associated with Tech Innovation

Originating Year:	2020	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

The current Heritage Resource Inventory is primarily made up of residential and commercial properties and districts. The designation of these resources is generally associated with architecture, early industry, historical events, and prominent individuals. Although some important technological innovation has originated in Sunnyvale, the City does not currently have any heritage resources on the local list that are tied to more modern technology. For example, the first computer game, Pong, was invented within the Moffett Park neighborhood.

As development pressures continue, the Heritage Preservation Commission (HPC) expressed concerns over the loss of structures that may have historic value. Therefore, HPC identified the need to study the history of technological innovation in Sunnyvale and seek out potential resources that may be eligible for listing on Sunnyvale's Heritage Resource Inventory.

Extensive research on the history of technological innovation in Sunnyvale has been conducted. Based on information obtained, potential properties may be eligible for listing on the Heritage Resource Inventory would be identified. It's important to note that traditionally the City obtains property owner consent before adding a property to the Heritage Resource Inventory, the study would evaluate that aspect and inform property owners before adding any property.

This study includes a review of existing publications related to the histories of technology, discussion with staff at the Sunnyvale Heritage Park Museum, and visits to local libraries. A review of other cities' historic preservation programs related to technology has also been completed. In addition, the City will conduct outreach meetings with affected and/or interested property owners and business owners and community members who may have valuable information to contribute to the topic.

Project Evaluation and Analysis

This study issue was ranked highly by the Heritage Preservation Commission and the City Council. Staff would use the funding to hire a specialized historic consultant to evaluate technological ties to Sunnyvale to determine if there are local properties that warrant listing on the heritage resources inventory list. See SunGIS File 87-83.

Fiscal Impact

Council has approved \$75,000 to hire a specialized consultant to assist staff in completing this Study Issue. Planning staff hours are covered within the normal operating budget.
April 2025: Phase 2 approved addition of \$15,510 for Study Issue CDD# 19-05

834980 - Finance Tax Audit

Originating Year:	2020	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Nancy Grove

Project Description/Scope/Purpose

This project conducts audits for City's Tax Collections every other year which may include Transient Occupancy Tax (TOT) or Utility User Tax (UUT). The consulting firm should conduct a thorough review of City ordinances and resolutions requiring the collections and remittance of taxes and fees due to the City. They will also analyze tax collections and provide return information to identify unusual or suspicious reporting. The firm will provide a detailed analysis report to the City, identifying non-compliant tax remitters who might require additional investigation or review to determine their compliance with the City's ordinances. This project will consist of selecting a consulting firm to conduct the audit and provide the City with the findings to assist the City in recovery of TOT and UUT revenue. In FY 2021/22 a consultant was selected for UUT audits and should complete the review during FY 2022/23.

Project Evaluation and Analysis

This project is a responsible and necessary step to ensure that the City is receiving all the revenue it is entitled to and that all taxpayers are following the City's ordinances and regulations. the regular audits will help to maintain transparency and accountability in the tax collection process, ensuring that all taxpayers are treated fairly and equitably.

Fiscal Impact

This project is funded by the General Fund. Fees, penalties, and interest collected as a result of the audit will offset the cost of the services performed.

835110 - Digital Accessibility Implementation

Originating Year:	2020	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Connie Verceles

Project Description/Scope/Purpose

The Americans with Disabilities Act (ADA) requires state and local governments to provide accessible services for people with disabilities. This project ensures the City's public-facing technologies comply with ADA standards. The City uses the Granicus Web Content Management System to manage its website. New federal ADA rules, effective April 24, 2026, require agencies with populations over 50,000 to meet WCAG 2.1 Level AA accessibility standards for websites and mobile apps. The City must review and update a large volume of online content to comply. Key areas for review include the City and NOVA websites, mobile apps, archived content, PDFs, images, third-party systems, social media, and password-protected content. Staff training and process improvements will also be needed to maintain compliance.

Project Evaluation and Analysis

Phase I of this project will retain consultants to help identify accessibility gaps in the City's forward-facing technologies, including the website, Legistar, and CRM systems.

The City's website meets ADA standards, but many posted PDF documents do not. The City must remediate existing PDFs and ensure all new documents are ADA compliant, requiring third-party software and staff training across departments. Phase II will focus on remediation and implementation. The vendor will also provide staff training and develop how-to guides to support ongoing compliance for web and mobile content.

Fiscal Impact

Initial project is funded with one-time funding from the General Fund. Additional funding total \$450,000 and operating cost is \$100,000 annually from Technology and Communication Services Fund. Project costs include: implementation consulting services to help provide City staff training and develop training documents, to include how-to guidelines for City staff to know how to maintain and create content that is in compliance.

Funding Sources

General Fund and Technology and Communication Services Fund.

835020 - Sunnyvale Biennial Elections

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	David Carnahan

Project Description/Scope/Purpose

Per Article VI, Section 601 of the City's Charter, members of the Council, including the Mayor serve four years with elections held every two years. Council Districts 2, 4 and 6 along with the Mayor are filled at elections held in Presidential Election years. Council Districts 1, 3 and 5 are filled at elections held in Midterm Election years.

For the November 2026 election (FY2026-27), the City is budgeting for up to an additional five (5) ballot measures dependent on the recommendations of the Charter Review Committee (CRC). The CRC plans to conduct polling in FY2025-26 to ensure proposed ballot measures reflect community preferences and needs.

Project Evaluation and Analysis

The project funds the cost of election services provided by the County of Santa Clara's Registrar of Voters as well as costs for mandatory advertisements of ballot measures and Council elections every other year. It is cost prohibitive for Sunnyvale to conduct biennial elections in-house. Staff will request updated cost estimates from the County prior to election cycles for the number of Council seats included in each election and for the potential to add two ballot measures in each election. The two-year cycle aligns with the Charter mandated every other year Council elections.

In anticipation of the November 2026 election, the Charter Review Committee (CRC) will be making recommendations for ballot measures. As a result of this process, the City is planning for public polling/consulting support and up to an additional five (5) ballot measures.

Fiscal Impact

The cost for election services is determined by a quote provided to the City through the County's Registrar of Voters (ROV) based on two (2) ballot measures and the number of council seats up for election every two years. The City applies a 3% inflation factor and 15% buffer to the ROV estimate based on historical actuals.

In FY2025-26, the City is allocating \$30,000 for public polling/consulting support. In FY2026-27, the ROV estimate for the November 2026 election, including an additional five (5) ballot measures, is \$1,599,103 (FY2026-27).

835120 - Biennial National Citizen Survey

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Connie Verceles

Project Description/Scope/Purpose

The City commissions the National Research Center INC (NRC) every other year to conduct the National Citizen Survey (NCS) to assess and evaluate how Sunnyvale residents feel on the quality of services provided by the City. The City Council and city leadership rely on survey results to make informed policy decisions. The survey result is also published on the City's websites for residents to view.

Project Evaluation and Analysis

The project is an ongoing service to provide valuable insights to City leadership on resident concerns and priorities. It compares residents satisfaction with Sunnyvale's service delivery with similarly sized cities nationwide. Several of the City's performance indicators are derived from the survey. The biennial survey also allows leaders to see trends over time and compare results with prior years.

Fiscal Impact

The project is funded by General Fund. Due to the biennial cycle of the survey, funding is included as a project versus as an annual operating cost. Future budgeted cost is based on the latest actual cost.

835130 - Council Technology Expense

Originating Year:	2020	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Michelle Zahraie

Project Description/Scope/Purpose

The project is used to fund each Council seat's technology allowance once per four-year term as outlined in Council Policy 7.4.2- Council Equipment, Materials, and Supplies. The technology allowance amount is based on the Council Tech Escalation Workbook (base year: Oct. 2021).

Project Evaluation and Analysis

Certain supplies and materials are required by Councilmembers to discharge their functions. Councilmembers are provided materials and supplies when requested, which shall be used predominantly for City business and only incidentally for personal use.

A technology allowance per Councilmember per four year term is available the purchase of equipment including, but not limited to, a personal computer or laptop and/or mobile electronic device, such as a cell phone, tablet, or notepad. Equipment purchased with this allowance shall be consistent with standard City issue, or approved by the Director of Information Technology, and shall be returned to or purchased from the City at market rate when a Councilmember leaves office. An amount not to exceed \$79 per month (nontaxable, adjusted based on the 2021 base year) shall be reimbursed for monthly service charges for equipment purchased.

Fiscal Impact

Due to the cyclical nature of the expense, funding for the technology allowance is included as a project versus as an annual operating cost. The monthly stipend for service is in the Office of the City Manager operating budget.

Commencing on January 1, 2022, and annually on January 1 thereafter, the technology allowance and monthly service charge reimbursement shall be increased by inflation.

835490 - Community Events & Neighborhood Grants

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

The mission of the Neighborhood Grant Program is to: build community engagement in Sunnyvale; help residents develop a sense of pride and ownership in their neighborhoods; and continue to develop collaborative partnerships between Sunnyvale's neighborhoods and City Hall. Grant funds are the City's investment in strengthening neighborhood groups, improving the quality of life in local communities, and encouraging neighborhood groups or associations to become increasingly self-reliant.

The Community Events Grant Program mission is to support and encourage groups to build community and celebrate our unique culture by holding community events in Sunnyvale. The event should encourage celebrations of community which focus on the character, diversity and quality of Sunnyvale and provide vitality and identity to the community.

Grant funding is not intended to be an ongoing funding source for events or neighborhood groups. Funding in one year is not a guarantee of future funding. Funding requests for both grant programs are considered as part of an annual competitive application process in November each year for events taking place the following year.

The Community Events and Neighborhood Grants Program (CENGP) is administered through the Library and Recreation Services Department in partnership with the City Council CENGP Subcommittee.

Project Evaluation and Analysis

Funding for the Community Events and Neighborhood Grants Program(s) has been allocated through the General Fund and meets the below Council goals. As the grant funding is on a calendar year cycle, budgeting these funds in a project allows the funds to span two fiscal years.

Council Policy 7.2.1, Community Engagement – Goals and Policies

Goal B: Achieve a community in which all community members can be actively involved in shaping the quality of life and participate in local community and government activities.

Goal C: Create a strong, positive community identity, rich in cultural diversity.

Council Policy 7.2.18, Special Events

D. Community Event Program

The City may fund community events through this program.

Fiscal Impact

Project funds are planned annually across the long-term financial plan with inflation. During the 3/5/2025 Council Meeting presentation it was approved to increase the CENG project to \$150,000 and increase the amount every other year by \$5,000.

835580 - Replacement DPS Video Surveillance System

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

The project will replace the video surveillance system used by DPS for the headquarters building. The project includes: acquisition of servers, redundant disk storage and the video application software; installation and configuration of hardware and software; and migration of data files from the old system.

Project Evaluation and Analysis

The DPS video surveillance system was scheduled on a fifteen year replacement cycle, with associated components on five to seven year cycles. The last replacement of the system was in 2010. The related components were replaced in 2010, 2011 and 2013 and replacement has been delayed. The replacement is necessary to ensure continued functionality of the video surveillance system and the timing will align with the new Computer Aided Dispatch (CAD) project. This project only funds the current replacement cycle.

Fiscal Impact

Funding for this replacement and ongoing replacements of this system are available in the General Services Fund / Technology and Communication Services Sub-fund. Internal service charges are collected from the Department of Public Safety to fund the replacement. Estimated project costs are based on prior replacement and actual project cost to be determined upon completion of competitive procurement.

835590 - Replacement DPS Mobile Computing

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

The project will replace the mobile data terminals (MDT's) in the patrol and Community Service Officer vehicles. The project includes: acquisition of rugged laptops with mobile broadband and mounting equipment; installation of existing applications and software as needed; installation of mounting equipment; and wiring the MDT securely into the patrol vehicle.

Project Evaluation and Analysis

The equipment is scheduled on a five year replacement cycle. The last replacement was in 2019. The current agreement will expire in 2024 and replacement is necessary to ensure the system's functioning. This project only funds the current replacement cycle.

Fiscal Impact

Funding for this replacement and ongoing replacements of this system are available in the General Services Fund/Technology and Communication Services Sub-fund. Estimated project costs are based on prior replacement and actual project cost to be determined upon completion of competitive procurement. Internal service charges are collected from the department of Public Safety to fund the replacement.

835600 - Replacement DPS Enterprise Storage

Originating Year:	2021	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

The project will replace enterprise storage exclusively used by DPS for in-house applications, individual drive and department share folders. The project includes: acquisition of redundant disk shelves for both the primary and backup storage units and associated controllers; installation and configuration of hardware and software; and migration of data files from the old enterprise storage.

Project Evaluation and Analysis

The equipment is scheduled on a seven year replacement cycle. The last replacement was in 2018. The replacement is necessary to ensure continued maintenance and availability of file storage for required record keeping. The project funds were used to purchase replacement storage.

Fiscal Impact

Funding for this replacement and ongoing replacements of this system are available in the General Services Fund/Technology and Communication Services Sub-fund. Estimated project costs are based on prior replacement and actual project cost to be determined upon completion of competitive procurement. This project only funds the current replacement cycle. Internal service charges are collected from the department of Public Safety to fund the replacement.

835950 - Universal Basic Income Study

Originating Year:	2022	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Jennifer Carloni

Project Description/Scope/Purpose

Universal Basic Income (“UBI”) Programs have been adopted by several California cities over the past few years, with Stockton becoming the first city in California to adopt one in 2019. The concept of a UBI program revolves around providing a monthly stipend to income-qualified individuals over a specific time period. These programs seek to confront, address, and humanize some of the most pressing problems our country faces: inequality, income volatility, and poverty. This project will study UBI program options.

Project Evaluation and Analysis

While Sunnyvale is located within the heart of Silicon Valley with a relatively high median income, nearly six percent of Sunnyvale residents have incomes that fall below the poverty line. Staff will need to hold significant community outreach during this study issue to understand program options as well as the full range of need/demand, population to serve, and sustainable funding sources.

Fiscal Impact

\$100,000 was approved with Budget Supplement 2 as part of FY 2022/23 budget adoption. Any program implemented as a result of the study will likely result in additional costs with amount and potential funding sources unknown at this time.

836250 - Expand Webform Options for Utility Work Orders

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Stephen Napier

Project Description/Scope/Purpose

This project will enable the addition of new service request types in on the City website related to solid waste and recycling. Currently, customers can request on-call collection or clean cart replacements using a webform. This project will explore additional options such as damaged cart replacement requests, missing cart notices, or size exchanges.

Project Evaluation and Analysis

The budgeted funds will cover the vendor cost to develop and implement the system, with ongoing operating impacts programmed to cover ongoing maintenance of the forms. Once the forms are built, Information Technology will implement a process for taking the data from the forms and automatically generating work orders in the utility billing system.

Fiscal Impact

The vendor will assess an implementation fee, and then there will be an annual subscription for the service once we go live with the new webforms. Ongoing operating costs will be needed starting in FY 2026/27 to cover annual subscription. Project costs will be split between the three utility funds.

Funding Sources

Water Supply and Distribution Fund, Solid Waste Management Fund and Wastewater Management Fund

Plans and Goals

EM - Environmental Management - EM-12: Safe and Healthy Solid Waste Collection

836260 - Sunnyvale Unity

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Fernanda Perdomo Arciniegas

Project Description/Scope/Purpose

This project supports community engagement events included in the Human Relations Commission (HRC) Work Plan. The Sunnyvale Unity Series is an event series much like the Sustainable Speaker Series sponsored by the Sustainability Commission. It supports 3-5 smaller community dialogues or speaker events sponsored by the new HRC. The series focuses on equity, access and inclusion (EAI) topics based on direction from the Commission.

Project Evaluation and Analysis

These 3-5 events align with the Council's EAI goals and help build a culture of belonging in Sunnyvale.

Per event estimated costs:

1. Speaker honorarium or training fee (\$1000-\$10,000)
2. Refreshments (\$200-\$500)
3. Marketing (\$300-\$700)
4. Other potential needs: childcare (unknown), interpretation (\$2,000)

Fiscal Impact

\$15,000 has been budgeted for three years through FY 2024/25. The budget increased to \$20,000 in FY 2025-26 based on prior year actual costs.

Funding Sources

General Fund

836270 - Community EAI Needs Assessment

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Connie Verceles

Project Description/Scope/Purpose

This project would fund consultant support to conduct a community needs assessment focused on equity, access, and inclusion in Sunnyvale. Staff would prepare a request for proposal for consultant support. The scope of work would include: 20 focus groups with stakeholders and target population groups most impacted by social inequities and an analysis of demographic data. The deliverable would be a report detailing the equity, access, and inclusion issues identified in the assessment. The report would be reviewed by the Human Relations Commission (HRC).

Project Evaluation and Analysis

The HRC would use this assessment to identify opportunities to increase justice and belonging in Sunnyvale. It would allow the HRC to use data to develop recommended action steps for Council consideration.

Fiscal Impact

Initial \$75,000 is funded by the General Fund for the community needs assessment only. Implementing results of the needs assessment may result in additional costs. Increase budget to \$180,000 in FY2025/26 based on expanded scope and revised cost based on consultant proposal.

836280 - Equity, Access, and Inclusion (EAI) Training

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Fernanda Perdomo Arciniegas

Project Description/Scope/Purpose

This project funds employee and community equity, access and inclusion (EAI) training (\$50K) and support for our internal equity team (\$15K).

All training and presentations will include consultant support to continue normalizing conversations about equity and operationalizing equity tools.

Sunnyvale Employees for Equity and Diversity (SEED) Team activities and events include GARE membership, conferences, individual member training, books or other reading material, and SEED sponsored employee events.

Project Evaluation and Analysis

The City has begun building the foundation of understanding for EAI internally. It's clear from staff feedback that additional training is needed to better understand the role of local government in addressing inequities both organizationally and in our community. We need additional training and support on tools to operationalize EAI in our day-to-day work. We will likely need to do some specialized training/coaching based on work levels (supervisor/manager) or work area (Finance vs. Public Works). The training program will be refined by our EAI Manager. The SEED team will continue to advise our approach to fostering a culture of belonging within our organization.

Fiscal Impact

\$65,000 is funded from the General Fund annually until FY 2025/26 with a corresponding reduction in project 835620 - Cultural Inclusion. During this time, the City's EAI training needs will be assessed for incorporation into the department's operating budget. Associated operating impacts start in FY 2026/27.

836360 - Research and Development Fund

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

Request to establish an Innovation Fund to support research and development of new technologies that would be managed by the Chief Information Officer (CIO) and approved by the City's IT Steering Committee for use. These funds will be used for small proof of concept project(s) that provide the City flexibility to try new technology without a full investment.

The City's IT governance, IT Steering, changed priorities on what proof of concept projects to implement due to other projects incorporating some of the initial pilot projects. A new project list will be established in early 2025 for implementation of proof of concept project(s).

Project Evaluation and Analysis

The City currently has no financial means to try-and-buy technology solutions beyond simple client device purchases. In order to invest in new technology without making a full tech investment and needing to adopt new solutions in a trial/proof of concept. The Innovation Fund will be monitored by IT Steering for prioritizing ideas for fund use and administered by the CIO. Funds will be used for small proof of concept (i.e. pilot) projects that provide the City flexibility to try new technologies without a full investment. This fund will promote the Council desire to continue to Improve Processes Through Technology with small investments and trial periods of new uses for technology. It will also provide for ramp up funding for larger initiatives.

Fiscal Impact

The project was originally approved with a \$50,000 budget for a two-year pilot period, with the understanding that if the project demonstrated clear benefits to the City, ongoing funding needs would be reassessed. Following the pilot's completion, an annual allocation of \$25,000 was approved in the FY 2025/26 Budget to support its continuation.

836420 - El Camino Real Sense of Place Plan

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

This project is one of the final components of the adoption of the El Camino Real Specific Plan (ECRSP). The Sense of Place Plan would establish standards for sidewalks, lighting, street trees and other pedestrian and bicycle improvements along the corridor. The standards would be evaluated by Public Works, or assigned consultant, to establish costs associated with the improvements. In addition to those improvements, this project would also include a Gateway Program to enhance the City's "front doors" by not only constructing improvements in the areas seen by most people, but by doing so in a way that provides a unique identity and sense of place for each location and the edges of the City and it would include any additional wayfinding as needed.

Project Evaluation and Analysis

Updates and enhancements to El Camino Real have always been a highly ranked item by the Planning Commission and the City Council. These improvements would enhance pedestrian and bicycle safety and add identity at key points along El Camino Real.

Fiscal Impact

This project will fund the cost of a consultant to develop Sense of Place standards for the public infrastructure in the El Camino Specific Plan area. Costs for the improvements will be a requirement of development along El Camino Real with the fee collected at the building permit phase. The cost of developing the plan is expected to be recovered through the Sense of Place fee as well.

Funding Sources

General Fund

836430 - SB379 SolarApp+

Originating Year:	2022	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Suzanne Park

Project Description/Scope/Purpose

The project is for an \$80,000 grant from the State of California Energy Commission. The project funds cover the cost of implementation of a new auxiliary plan check system and associated training as required by the State of CA SB379 (2022).

Project Evaluation and Analysis

SB379 requires jurisdictions to implement an 'instant' plan check and permit system to expedite the installation of solar panels by licensed contractors by September 1, 2023. SB379 identifies SolarApp+ or a jurisdiction-developed equivalent as an acceptable method of complying the law. Instead of developing a parallel permitting system, the City will use SolarApp+.

Fiscal Impact

Grant funded by State of California Energy Commission (California Automated Permit Processing Program [CalAPP]) for \$80,000. There are no additional anticipated operating costs.

Funding Sources

State of California Energy Commission CalAPP Grant in the General Fund

836530 - Update Historical Context for Contributions by Asian Americans & Other Minority Groups

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

The Heritage Preservation Commission identified the need for an update to the Historical Context Statement to include more thorough information about Asian Americans and other minority groups. An updated document could help to inform the Council on potential heritage and landmark resources that are not currently designated for preservation. The City Council adopted the Historical Context Statement in 2012, which provides a framework for setting goals, policies and action statements that direct the City's heritage preservation program. The Historical Context Statement documents different aspects of the historical development of Sunnyvale, such as land use patterns, important events, and architecture. In addition, prominent figures who have contributed to Sunnyvale's history are included, such as the early Native Americans, Spanish-Mexican settlers, European farmers, and Japanese and Chinese laborers and farmworkers.

Project Evaluation and Analysis

The Study would expand on the current Historical Context Statement with more detailed information on contributions made by Asian Americans and other minority groups to Sunnyvale's rich and diverse history. Research may include a review of existing publications not already referenced in the current Historical Context Statement, meeting with the Sunnyvale Heritage Park Museum staff, and visits to local libraries and the California History Center at De Anza College.

Fiscal Impact

Council has approved \$50,000 to hire a specialized consultant to assist staff in completing this Study Issue. Planning staff hours are covered within the normal operating budget.

Funding Sources

General Fund

836590 - Eliminate the Use of Chemical Pesticide on City Owned or Leased Property

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	270 - Environmental Services
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Emma Hinojosa-Moffatt

Project Description/Scope/Purpose

Project consists of completing Study Issue ESD 17-01, which aims to study the costs and benefits of reducing or eliminating pesticide use on City property. A consultant will be hired to complete benchmarking, cost benefits analysis, and assist the City in identifying a potential pesticide-free park pilot project.

The City of Sunnyvale has an Integrated Pest Management (IPM) Policy for City-owned facilities, adopted in June 2010. The plan aims to reduce or eliminate pesticide use on City properties, educate City staff about the policy, and provide guidance on best practices for pest management. The Study Issue also includes evaluating additional tactics that may be included in a revision to the IPM policy.

Project Evaluation and Analysis

This project funding will support hiring a consultant for the majority of the assessment and analysis. Staff will complete the outreach and engagement plan and absorb the costs of publicizing the survey.

Fiscal Impact

\$100,000 from the General Fund to complete the study. The results of the study may result in additional capital and operating costs.

836600 - Climate Budgeting

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Madeline Khair

Project Description/Scope/Purpose

Project consists of completing Study Issue ESD 23-01, which aims to assess if and how climate impacts can be incorporated into the City's budget and long-term planning process. The City does twenty-year financial planning for all its major funds. The City's Climate Action Playbook establishes greenhouse gas reduction goals for 2030 and 2050. In order to ensure alignment of the City's budget with its greenhouse gas goals, consideration of greenhouse gas impacts of projects and operations should be incorporated in the City's budget.

Project Evaluation and Analysis

Funding for this project will support hiring a consultant or additional staff to support the research and analysis required for this study.

Fiscal Impact

\$75,000 from the General Fund this study. The results of the study may result in additional operating costs for budget process administration.

836620 - Evaluate Development of a Single Mobile App (Sunnyvale App) for all City Functions

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

This study will evaluate the requirements, define the framework, and standards for a Sunnyvale Application (App) as a single solution to accessing City services. The Information Technology Department and City Manager's Office will work with the consultant, current app vendors, and department stakeholders in order to provide the most appropriate options related to the following:

- Defining a potential framework to develop a single mobile application for all residents and businesses to communicate, track, interact, and transact with the City.
- Evaluating options for developing a single mobile application to access common City online and mobile services.
- Evaluating the potential consolidation of the City's three separate applications.
- Providing alternatives that include implementation costs and any potential revenues or savings.

This project will begin once the City has selected a new customer relationship management (CRM) system and the integration needs are better defined, estimated to start in 2026.

Project Evaluation and Analysis

This study was requested by Council at the Study Issues/Budget Proposals Public Hearing in January 2023 as mobile apps have become ubiquitous for interactions between users and organizations. Mobile apps make it easier for residents to interact with the City. Currently there are three mobile apps on Google play and Apple Store related to services provided by the City: Sunnyvale Recycles Right, Sunnyvale Street Sweeping, and Sunnyvale Public Library Mobile. As more and more City services are mobile-enabled, there needs to be a single solution with a consistent user-interface for all these apps. This single mobile application (framework) would allow users to get information, interact, communicate, and transact with the City for common online services. This will provide a central mobile app to be downloaded on the users' phone or mobile device and provide an easier one-stop experience for the residents.

Fiscal Impact

Study Issue ITD 23-02 was funded with a Budget Supplement as part of the FY 2023/24 Adopted Budget. Costs to perform the study are expected to be covered by the project budget. Should City Council decide to move forward with implementing any of the options as a result of the study, the fiscal impact is unknown though likely to result in both one-time and ongoing costs.

836730 - ERP Stabilization and Support

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

The purpose of this project is to provide time for analysis and justification for the ongoing operational needs of the Enterprise Resource Planning (ERP) System as well as, implement the last two modules (Performance and Learning) and includes funding for consulting support. The overall outcome is system stability and usability for the ERP and Human Capital Management (HCM) modules. The project will accomplish this by gaining a clear understanding of the resources needed for ongoing operations, including specialist consulting.

Project Evaluation and Analysis

This project ensures a successful implementation and transition to support for the ERP. The City is dedicating experienced staff to the project and providing staffing backfill to cover operational tasks. The City has also secured professional implementation services from both product vendors and outside consultants, as specialized expertise in the set-up, data conversion and installation of these types of large systems is critical.

Approved in RTC 23-0955

Fiscal Impact

The project is funded for the term of 27 months.
\$540K in consultant support (RFP), for ongoing configuration, optimization and automated testing
\$122K for mid-term consultant support by the current implementation vendor (Sierra Cedar)
\$275K to implement the performance management module for the Human Resources Department
\$2,535,189 for staffing five TL positions

836740 - Opioid Settlement Funds

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Nancy Grove

Project Description/Scope/Purpose

On July 21, 2021, settlements were announced to resolve several lawsuits involving the three largest pharmaceutical distributors (McKesson, Cardinal Health and Amerisource Bergen) and the opioid manufacturer Janssen (owned by Johnson & Johnson).

Allocations from the California Abatement Accounts Fund must be expended on opioid remediation activities focused on prevention, intervention, harm reduction, treatment, and recovery services in California communities. No less than fifty percent (50%) of the funds received by a Participating Subdivision in each calendar year will be used for one or more of the High Impact Abatement Activities (HIAA) listed below:

1. Provision of matching funds or operation costs for substance use disorder facilities with an approved project within the Behavioral Health Continuum Infrastructure Program (BHCIP)
2. Creating new or expanded substance use disorder (SUD) treatment infrastructure
3. Addressing the needs of communities of color and vulnerable populations (including sheltered and unsheltered homeless populations) that are disproportionately impacted by SUD
4. Divers of people with SUD from the justice system into treatment, including by providing training and resources to first and early responders (sworn and non-sworn) and implementing best practices for outreach, diversion and deflection, employability, restorative justice, and harm reduction
5. Interventions to prevent drug addiction in vulnerable youth
6. The purchase of naloxone for distribution and efforts to expand access to naloxone for opioid overdose reversals

Planned use of funds include the following activities.

- Provide intervention resources and prevention programs and services for youth that are currently drug addicted.
- Train Library staff on the administration and distribution of Naloxone. Community education on dangers of drugs and strategies to prevent overdoses.
- The purchase of naloxone for use in Public Safety operations and resources for additional officer training.

Project Evaluation and Analysis

To participate in the settlements, Sunnyvale accepted the terms and conditions of the California State Subdivision Agreements, which certify that we will use funds for eligible opioid abatement activities and prepare and file annual reports regarding the use of those funds. California Department of Health Care Services oversees this annual reporting and ensures compliance with the allocation agreements.

Fiscal Impact

The City began receiving funds in Spring 2022. It is estimated that the City will receive \$1.03M through 2039 from the Distributor, Janssen, Teva, Allergan, CVS, Walgreens and Walmart Settlements.

Funding Sources

Opioid Settlement Funds

836770 - Light Pole Banners

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Christine Velasquez

Project Description/Scope/Purpose

Purchase 40 banners to replace 10+ year old banners located on El Camino Real and on Mathilda at a cost of \$15K in FY 2024/25. Additional funding of \$20K will be available in FY 2025/26 to purchase 240 banners to replace 10+ year old banners in Downtown Sunnyvale. After replacement of 10+ year old banners, replacement banners will be purchased for each location at 5-year intervals.

Project Evaluation and Analysis

The City uses banners at entryways (El Camino Real) to welcome and help visitors recognize when they enter Sunnyvale. The banners are also installed in Downtown Sunnyvale to capture attention and distinguish downtown from other parts of the City. Banners enhance the appearance and convey different messages to visitors.

Fiscal Impact

Replace 10+ year old banners in FY 2024/25 for \$15K and FY 2025/26 for \$20K. Funding will be available at 5-year intervals for each location. El Camino/Mathilda banners (\$15K) and Downtown Sunnyvale (\$20K) funding will continue until Fiscal Year 2040/41. Total project budget is \$125K.

836800 - Property & Evidence Audit

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

This project provides funding to periodically conduct an audit of property and evidence in custody with the Department of Public Safety. The Peace Officer Standards and Training Commission Evidence and Property Management Guide states that audits should ensure that standards and policies are routinely followed, evidence/property is protected from damage or deterioration, appropriate chain of custody processes are utilized, written documentation (e.g., flow charts, property reports, and logs) are appropriately maintained, notification and release authorizations have been obtained, evidence/property location and status are validated, and evidence/property having no evidentiary value is being disposed of according to policy.

Project Evaluation and Analysis

The city conducts regular operational, procedural, and financial audits in many business areas throughout the organization. Periodically ensuring property and evidence is documented, tracked, and monitored appropriately pursuant to agency and judicial standards will minimize risk while safely and securely maintaining items in custody.

Fiscal Impact

The project will be funded by the General Fund. Audits can also make recommendations to improve processes or facilities.

836810 - Commercial Feasibility for Private Residential and Mixed-Use Projects

Originating Year:	2023	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

This project will make funds available for the City Attorney's Office and the Community Development Department to retain outside specialized technical experts needed to evaluate how the housing law applies to specific projects.

Project Evaluation and Analysis

Residential and mixed-use projects pose unique challenges and complexities for City evaluation of proposed development plans in the context of state housing law, sometimes raising technical issues necessitating outside consulting services. Carefully evaluating proposed development projects is critical to ensuring the City is adhering to state law while sustaining the appropriate balance of jobs, residences, and economic diversity.

Fiscal Impact

One time consultant services in the amount of \$250,00.00. Funds would be from the Development Enterprise Fund.

Funding Sources

Development Enterprise Fund

836820 - Fourth of July Drone Show

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Laura Jammal

Project Description/Scope/Purpose

The 4th of July drone show will take place at Baylands Park in north Sunnyvale while providing a free, family-friendly event that brings the community together to celebrate each other, the City of Sunnyvale, and our nation's independence.

Project Evaluation and Analysis

Drone light shows are a more environmentally friendly alternative than traditional fireworks. Drone lights emit less noise and air pollution than fireworks. Compared to fireworks, using drones avoids common fireworks debris and hazards, such as fire danger and air quality impacts.

Fiscal Impact

The estimated cost to cover City costs for a 2024 Fourth of July drone show is up to \$100,000. In addition to fees associated with procuring a drone light show contractor, there will be various internal service costs required to deliver a Fourth of July drone show, specifically staff overtime for the following supporting departments: Library and Recreation Services Department, Department of Public Safety, and Department of Public Works (Streets and Parks). The estimated total cost of a 10-12 minute drone show is \$55,000 to \$65,000, plus staffing costs of approximately \$35,000.

2025 costs to be determined. Estimate is approximately \$400,000 to \$450,000.

836890 - Changes to Chapter 3 of the Citywide Objective Design Standards

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

The City Council adopted the Citywide Objective Design Standards for Multi-Family Residential and Mixed-Use Developments on June 27, 2023. The motion included the following additional action:

- Direct staff to examine a point system for Chapter 3 aimed at supporting traditional architectural forms and the treatment for stories above 8 floors, include a 10% reduction in every 4 stories versus every 1 story, and return to Council with a report.

Staff requested a scope of work from Placeworks (the consultant for the Objective Design Standards) and the cost for the additional work is estimated at \$36,955. The scope would include the following analysis:

- New building stepback standards.
- Improved organization of standards within and between Table 3A, Street Stepback Standards and Table 3B, Division of Building Length Standards, and related text standards.
- Addition of a façade- or materials-based option for fulfilling division of building length standards.
- Revised and/or new Chapter 3 graphics.
- Addition of a Chapter 3 “scorecard” standard.

The scope would also include Study Sessions and Public Hearings for the Planning Commission and City Council.

Project Evaluation and Analysis

Due to the requirements of the Housing Accountability Act, many projects that submitted SB330 Preliminary Applications prior to June 2023 were not subject to the new Objective Design Standards; also, since June 2023, there have only been a few new residential (or mixed-use) development applications filed. An analysis of the effectiveness of the guidelines is not yet possible. Three vacant planner positions have contributed to the delay in getting started, however, these positions are now in the process of being filled. Staff would come back to the Planning Commission and City Council in late Summer 2025 with information regarding effectiveness of the Objective Design Standards Checklist. At which time, staff would provide a more detailed timeline. Staff expects the project would take about nine months to complete (inclusive of outreach, study sessions and public hearings).

Fiscal Impact

\$36,955 from the Development Enterprise Fund has been approved for this project.

836900 - Outreach and RFP for CRM With Mobile Application

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

Council approved expediting the study issue process and moving straight into Community Outreach, staff workshops, and requirements gathering to establish a Request for Proposal (RFP) and have a consultant assist the City in this process, to include assisting the City with evaluating vendor proposals. Study Issue ITD 23-01 Access Sunnyvale CRM System Upgrade to include access design for mobile applications was closed and study issue ITD 23-02 Evaluate the Development for a Single Mobile Application (Sunnyvale App) would be placed on hold until a new CRM was identified with it's own mobile app defined.

The scope of this project is to hire a consultant will help the City assess adding a mobile application to the current CRM, including market analysis and requirements gathering from City departments and community outreach with residents, neighborhood associations, and businesses. The consultant would also assist the City in issuing an RFP and assisting with proposal evaluations.

The project purpose is to complete the requirements and RFP process to procure a new CRM system that includes a suitable mobile application and is more user-friendly, incorporating the requirements and needs discovered through community outreach. Once the RFP is complete, and a vendor selected, a CRM Implementation project will be added to the budget.

Project Evaluation and Analysis

The current CRM does not include a native mobile application and was implemented 8 years ago. The technology and needs of the community has greatly advanced and by conducting community outreach, the City will be able to provide a more robust, user-friendly CRM that better caters to Sunnyvale's needs. A new solution is required and a thorough RFP process to evaluate all potential systems and implement the one that best meets the City's needs.

Fiscal Impact

In RTC 24-049, Council approved adding \$15,000 to the initial CRM study issue project 836610 - Access Sunnyvale Customer Relationship Management System Upgrade for Mobile Apps for a total project cost of \$155,400

836910 - Evaluate the Use of Artificial Turf Versus Living Groundcover

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	270 - Environmental Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Madeline Khair

Project Description/Scope/Purpose

The scope involves studying the impacts of artificial turf versus living grass and other ground cover alternatives on public and private properties in the City.

Study Issue ESD 24-01. The study will analyze the benefits and challenges regarding the installation and use of artificial turf on private and public properties. The Study Issue will also provide recommendations for the City to develop a policy regarding the use of artificial turf. The anticipated completion of Study Issue ESD 24-01 is June 2026.

Project Evaluation and Analysis

The Study will analyze the benefits and challenges regarding the installation and use of AT on private properties, including residential and commercial landscapes, and public properties, including athletic fields. The Study will also include an evaluation and analysis of how to manage and select natural grass alternatives for fields in public parks that will achieve the highest level of quality and maximize field use time for recreational and youth sports.

The 20-year financial plan includes artificial turf for the upcoming park renovations at Ortega Park and for the lawn bowling green at Murphy Park (both planned to begin design in FY 2032/33). The City also has a Capital Improvement Project (832710 - Synthetic Turf Sports Field) that was established to convert existing sports field to synthetic/artificial turf and allows for the replacement costs for existing fields, with the first replacement coming starting in FY 2029/30. The project currently has forecasted funds through FY 2040/41. Artificial turf has been removed from all near-term projects including the Lakewood Park Renovation and the Community Center Grounds rehabilitation. No artificial turf will be installed on any City projects pending the outcome of this study.

The City has three athletic fields with natural grass: Lakewood Park, Washington Park and Ortega Park. The Lakewood Park fields are scheduled to be replaced with natural grass fields as part of the Lakewood Park renovation project. These fields are can only be used from March to October each year. Natural grass fields wear faster, need time to recover after repeated use, and are often closed during inclement weather. The utilization rate for synthetic fields is about three times the rate for natural grass fields. Natural grass fields require more maintenance and upkeep than synthetic fields. However, there are significant environmental concerns with synthetic fields, as well as issues with field temperatures during hot weather events.

Fiscal Impact

The FY 2024/25 Adopted Budget includes \$100,000 for implementation of the original Study Issue ESD 24-01 under Project 836910 - Evaluate the Use of Artificial Turf Versus Living Groundcover, as well as the amended scope approved by Council which required an additional \$50,000.

836920 - Evaluate the City of Sunnyvale Study Issues Process

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Michelle Zahraie

Project Description/Scope/Purpose

The City's study issue process provides a method for identifying, prioritizing, and analyzing policy issues important to the community. It provides a structured approach for addressing the large number of issues that are raised each year, allowing Council to rank the issues, and set priorities within the limits of time and resources. It also allows staff to balance the work required to thoroughly study an issue such as a new program or policy with the work required to continue delivering high quality ongoing City services. According to the current Study Issues Process policy (7.3.26), any substantive policy change (large or relatively small) is subject to the study issues process. Policy related issues include such items as proposed ordinances, new or expanded service delivery programs, changes to existing Council policy, and/or amendments to the General Plan.

At the January 25, 2024 Council Strategic Workshop, Councilmember Richard Mehlinger sponsored a study issue related to improving innovation and agility in the City's study issue process. The Study will assist the City in determining whether the current Study Issues Process is an efficient and effective way for identifying, prioritizing, and analyzing policy issues, and where improvements may be warranted.

Project Evaluation and Analysis

This Study would evaluate the current Study Issues Process for improved efficiencies. Additionally, the Study may include:

- Identifying potential changes to the Study Issues Process policy, including changes in sponsorship, selection, deadlines, and ranking method.
- Identifying potential changes in staffing levels to support a defined process.
- Identifying potential system changes to track a Study.
- Identifying strengths and weakness in the current process.
- Developing criteria for a Study, triggers that would determine when a Study is required.
- Identifying alternative processes for when a Study is not required.

Fiscal Impact

A consultant who specializes in process improvement and design-based innovation would be hired to assist staff in completing the study and facilitate appropriate engagement in the process. Study would include assessment of potential costs, including capital and operating, as well as revenue/savings.

836930 - Establishment of a Sanctioned Encampment for Unhoused Individuals

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

This Study Issue would examine the possibility of establishing a sanctioned encampment site in or near the City of Sunnyvale; identify potential locations, prioritizing areas well-served by public transit and located a suitable distance from schools and residential neighborhoods; and explore partnership with nonprofits and other nearby governmental agencies, such as the County of Santa Clara (County) and Santa Clara Valley Water District (Valley Water).

A sanctioned encampment site could provide a place for unhoused residents to live without fear of having to go through an encampment clean-up. It would also facilitate the delivery of services, with a goal of getting residents into permanent housing. In addition, a sanctioned encampment could include water, electricity, sanitation, and trash services, and be laid out in such a manner as to minimize the risk of fire. Finally, it would provide a place to direct residents of unsanctioned encampments if and when their encampments are slated to be cleared, if space were available.

Project Evaluation and Analysis

Council is seeking to understand whether a Sanctioned Encampment would be a viable program for the City of Sunnyvale unhoused residents.

The Study would require significant partnerships among nearly all City departments, local homeless services nonprofits, and other stakeholders such as the County and Valley Water. Outreach would be a major component in terms of identifying the site and its suitability with its surroundings. Finding a suitable site is a major task, with implementation, logistics, safety, and other factors seen as major tasks with potential for significant costs.

Fiscal Impact

Cost to Implement study results is currently unknown. Study would include assessment of potential costs, including capital and operating, as well as revenue/savings; however, it can be assumed costs for this type of project would be significant as general components would include safety, case management, sanitation services, rent/acquisition costs, etc.

836940 - Determine Cost and Feasibility of Requiring Structural Retrofitting

Originating Year:	2024	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Suzanne Park

Project Description/Scope/Purpose

The Study will create an inventory of suspect soft-story buildings and non-ductile concrete buildings and will include a feasibility analysis of the program's implementation, outreach to business owners, consideration of incentives, and if a program would involve education only or a requirement to retrofit by a certain date.

Project Evaluation and Analysis

Study to determine the number of vulnerable structures, the cost and feasibility of structurally retrofitting compromised buildings, and a time frame to have building owners complete the retrofit. Earthquakes experienced in California have shown certain buildings do not perform favorably during earthquakes. Buildings classified as Unreinforced Masonry (URM), Tilt-up, Non-Ductile Concrete, and Soft-Story Buildings permitted for construction before January 1, 1979 (January 1, 2008 for Tilt-up Buildings), do not meet recognized seismic safety design standards. These buildings experienced failures that have led to property damage, personal injury, and loss of life.

Fiscal Impact

The one-time General Fund budget expenditure of \$125,000 that covers a City Council Study Issue regarding the safety of certain types of existing buildings. This study includes contracting a company that will physically catalog the two types of buildings included in the study. It will also assess the seismic integrity of the City's structures which can collapse during an earthquake, negatively impacting the City and its population.

837130 - Translation of Library and Recreation Services Policy Documents

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Michele-Bridget Ragsdale

Project Description/Scope/Purpose

Creating accessibility by adding Spanish and Chinese simplified translation for key Sunnyvale Library and Recreation registration policy, program, and facility rental documents. This will enable hard-to-reach populations to access information in their native languages.

Project Evaluation and Analysis

To help support hard-to-reach populations, we need to have a targeted approach to attract our community members with fewer barriers to utilize our library programs, picnic sites, park buildings, and rental facilities. According to the 2020 census data, Sunnyvale’s Asian population represents half of the City population. We currently have a few documents (Recreation Scholarship program and CNC at a Glance) translated into both Spanish. Only the Recreation Scholarship program has materials available in simple Chinese. 16% of Sunnyvale’s population identifies as Hispanic/Latinx while another 16% identify with some other race or two races.

From the 2022 American Community Survey, 85,370 households spoke a language other than English at home, and 55,975 spoke only English. The largest numbers of other languages spoken were Spanish, Chinese (Mandarin and Cantonese), and “Other Indo-European Languages.” Most were NOT limited-English speaking.

Propose to prioritize and translate documents over the next two-year project budget cycle. The project would cover the cost of translating the following groups of documents: Registration and Rental Policies and Program Documents for Recreation and the Sunnyvale Public Library.

Fiscal Impact

The immediate fiscal impact will be significant at \$27,000 (\$18,705.36 for registration and rental policies, \$3,860.41 for program documents, \$8,295 for Library documents). However, updating these documents will allow more transparency and knowledge for our community to understand our programs, thus removing another barrier that will be financially sustaining in the long term.

837240 - Project Reporting & Community Engagement System

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Jennifer Garnett

Project Description/Scope/Purpose

Develop and issue an RFP for an online community engagement system to update and integrate OR replace the City's existing tools such as Open City Hall and Knack (Top 30, Study Issues). Examples include Engagement HQ, Go Vocal, Social Pinpoint, ZenCity, Commonplace, and OneView.

Project Evaluation and Analysis

The City's existing tools for reporting project progress and engaging the community have limited functionality. Since we acquired them, new tools and systems have been developed that provide better ways for community input, data gathering, and reporting.

Fiscal Impact

ITD Cost Estimate of \$250k in FY25-26 based on vendor price research e.g., OneView: \$300k. Lower cost options may be possible although the City is looking for a robust tool to replace two existing systems and add features that we do not currently offer.

A new tool would need to be evaluated for the increase in operating expenses. Currently, we only pay \$990/year for Knack.

Funding Sources

Funded through Technology and Communication Services Fund - 7027.

Plans and Goals

CV - Community Vision - CV-1: Community Participation and Engagement

837250 - SharePoint Online – Sunspot Redesign

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Jennifer Garnett

Project Description/Scope/Purpose

Redesign the City's intranet site (basic Department template and pages for centralized resources for staff) and migrate system from classic to modern SharePoint.

Project Evaluation and Analysis

The classic platform is being deprecated and some of our existing modules need to have a MS ticket created regularly to remain enabled. Need to migrate to modern platform and as part of that project, improve access and navigation to citywide shared documentation and resources. Will also need to establish new Intranet governance and usage model.

Fiscal Impact

ITD Cost Estimate of \$350k in FY29/30.

Funding Sources

Funded through Technology and Communication Services Fund - 7027.

837260 - Staff Report Summary and Historical Topic Search (Madison AI)

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	David Carnahan

Project Description/Scope/Purpose

Use AI to streamline staff report summaries and historical data. Allow staff to better understand the history of a topic when drafting staff reports, speed up staff report writing and improve uniformity of reports.

Project Evaluation and Analysis

Ongoing assessment and staff survey to determine time savings of draft reports and whether quality of reports is maintained or improves.

Fiscal Impact

Potential vendor Madison.ai quoted \$25k/year for first module, \$10k/year for each additional module

Funding Sources

Technology and Communication Services Fund

837280 - CRM Implementation (Smart City - 9)

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

This project, led by the Information Technology Department (ITD), will modernize the City's existing Customer Relationship Management (CRM) system, including the development and integration of a mobile application. Building on insights from comprehensive market analysis, departmental requirements, and community outreach/engagement, the City will select and implement a CRM solution that effectively aligns with both internal operational needs and public expectations.

The enhanced CRM system will streamline the management of service requests, offer residents and stakeholders more convenient submission channels, improve overall user experience, and increase transparency in how services are delivered and tracked. Ultimately, this initiative aims to strengthen the City's ability to respond to community needs efficiently, consistently, and equitably.

Project Evaluation and Analysis

The existing system is built on the Microsoft Dynamics CRM platform and accessed via a public-facing web portal. While it initially met the City's operational needs, both community expectations and technological standards have evolved significantly since its launch. There is now a growing demand for a more integrated, responsive, location-based, and user-centric service experience.

To align with these emerging needs, the City recognizes the necessity of elevating its customer service delivery. This includes providing seamless, cross-departmental self-service capabilities, ensuring accessibility for all users, and offering multiple channels of communication—including a robust mobile application.

Furthermore, as the City continues to grow in size and complexity, there is an increasing need for more sophisticated tools to track and manage service requests and community concerns. The system must also enhance public engagement by improving the way the City informs and educates residents about available services and departmental functions. The system must also utilize newer technologies (e.g., AI, chatbots, etc.) to streamline workflows and assist with status updates. Lastly, the system must integrate with work order management systems to efficiently assign service requests and provide timely updates.

Fiscal Impact

The total project cost is \$2,603,883, of which \$95,858 is funded through the Technology Fund (replacement). This amount covers the implementation and stabilization of the new system.

The total annual operating cost of the project is \$432,600, of which \$171,374 is funded from current operating funds. Operating costs primarily includes licensing.

Please refer to the attached document for a detailed cost breakdown.

Funding Sources

7027 - Technology & Communications Services Fund, Partially funded through current Replacement Schedule.

837290 - Host Compliance (Granicus)

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Nancy Grove

Project Description/Scope/Purpose

This project will replace the current vendor providing short term rental compliance services. Services will include but not limited to identifying short term rental listings, addresses and contact information for hosts, outreach to unpermitted/illegal operators, dashboards to monitor compliance, reports to summarize compliance information. A request for proposals will be issued in June 2025 and a vendor will be selected by August.

Project Evaluation and Analysis

Since 2019 City staff have been working with Granicus/Host Compliance to assist in operator compliance with the City's Short-Term Rentals (STR) ordinance (SMC 19.76). Host Compliance has identified short term rental operators in Sunnyvale and staff prepared letters to send out educating providers about TOT and requirements for registering with CDD. Hosts also have the option of paying their TOT tax through the website. Since the start many vendors offering similar services have entered the market. Finance has initiated the development of a RFP to explore services offered by these vendors to assist with STR compliance.

Fiscal Impact

No fiscal impact as this is an ongoing operating cost.

Funding Sources

Costs to funds services is paid from Finance Department operations.

Plans and Goals

SN - Safety and Noise - SN-3: Safe and Secure City

837300 - Teller Online

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Nancy Grove

Project Description/Scope/Purpose

Implement online payment portal for City wide invoices created by Finance. In addition, other miscellaneous fees could be captured through this online portal. Teller Cashiering is currently integrated with the City's ERP system and implementation with their online portal would save significant time and resources should the City select a new vendor.

Project Evaluation and Analysis

CAN/AM Teller Cashiering went live in 2019 as part of the City's overall ERP implementation. Since that time Teller has been implemented at Finance, One-Stop, Library and Public Safety. This cashiering system is fully integrated with Oracle. In 2023 Teller introduced an online payment portal as part of their services. Sunnyvale residents and customers have requested the option of paying online which is a service offered throughout the City but not for Finance non-utility payments.

Fiscal Impact

Annual license cost would increase 5% each year following year 5. Replacement would be budgeted in FY 2035/36 for \$52,630.

837310 - Blade Server Replacement

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

Replace the City's blade servers to ensure continuous availability of critical systems. The upgrade will provide a modern, reliable infrastructure that improves performance and minimizes the risk of outages.

Project Evaluation and Analysis

The City's blade server infrastructure has reached end-of-support. Aging hardware poses an increasing risk of system failures, performance issues, and lack of vendor support—potentially disrupting City operations and services. Replacing the infrastructure is essential to maintain reliability and performance.

Fiscal Impact

The total project cost is \$882,231, which is fully funded through 7027 - Technology & Communications Services Fund. This amount covers costs for implementation include hardware, maintenance support, and backfill of City staffing. The ongoing costs include hardware support and upgrade/replacement costs.

Please refer to the attached document for a detailed cost breakdown.

837320 - SharePoint SunSpot Platform Upgrade

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

As part of this project, ITD will carry out a streamlined lift-and-shift migration of the City's intranet, Sunspot, transitioning it from the Classic experience to the Modern, fully supported interface to enhance usability, maintainability, and long-term support.

Project Evaluation and Analysis

In 2019, the City migrated from on-premises SharePoint 2010 to SharePoint Online. Due to time constraints driven by the Windows Server end-of-life, the City opted to move existing SharePoint pages "as-is," retaining the Classic look-and-feel. Since then, the Classic experience has reached end-of-support, and as of November 2024, the City has been running daily maintenance jobs to preserve core functionality. This project will ensure that Sunspot remains fully operational until a full redesign can be planned and implemented.

Fiscal Impact

The total project cost is \$200,850 and is fully funded through the 7027 - Technology & Communications Services Fund (replacement). This amount covers consulting services and licensed tools necessary to support the migration from the Classic to the Modern look-and-feel.

Please refer to the attached document for a detailed cost breakdown.

837330 - CMMS Replacement

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

Through this project, ITD will replace the public works work-order management system with a modern, work-order system that can also be fully utilized by ESD utilities work crew.

Project Evaluation and Analysis

The current work-order system is old and based on printed work orders, work order requesters cannot utilize maps (GIS) to input their requests and it does not integrate with any modern CRM. ESD utility work crews make the best use that they can, however the work flows are not specific to the work of specific work units. The new system will be GIS enabled, able to receive/create work orders based on CRM requests and allow the City to configure different workflows based on different work requests. Finally, the work orders will be enabled for mobile devices, eliminating the dependency on printed work orders.

Fiscal Impact

The total project cost is \$943,517, of which \$291,400 will be funded through 7027 - Technology & Communications Services Fund (replacement), and \$652,117 will be allocated from account 819771 – Utility Maintenance Management System. This amount covers the implementation of the new system.

The total annual operating cost is \$98,000, with \$35,697 funded from the current 7027 - Technology & Communications Services Fund operating budget. This covers ongoing maintenance and support.

Please refer to the attached document for a detailed cost breakdown.

837420 - Public Space Cleanup and Maintenance

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project was established to facilitate the removal of debris from public property. It funds the extension of the Tucker Construction contract to carry out the abatement of unhoused encampments on public property, as directed. Staff will be responsible for removing trash and debris, which may include identifying and safely disposing of biohazards and contaminated materials. Cleanup efforts may also involve outreach services to connect individuals with housing and other resources.

Project Evaluation and Analysis

The current contract falls under Project 835820—Temporary Housing for Unhoused Individuals. The removal of debris from public property is being designated as a separate project.

Fiscal Impact

This project is funded by the General Fund for a two-year period while assessing the broader needs of unhoused encampment abatement. The intent is to integrate this contract into the Operating Budget, alongside funding for any additional requirements, in accordance with Council's direction on abatement.

Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Kathleen Boutte Foster-Gee

Project Description/Scope/Purpose

Through this project, the Information Technology Department (ITD) will procure a platform vendor to provide AI governance capabilities and end-user training. The platform will automatically detect when new AI tools are being used or installed across the City. It will enable ITD to manage an inventory of AI systems and tools, helping to prevent duplication across departments.

The platform will also deliver end-user training integrated with the City's Learning Management System, educating staff on the responsible use of AI—highlighting risks such as data retention requirements and security concerns.

Additionally, ITD will engage consultants and backfill staff to establish a standardized data classification framework to support AI tool adoption and solution development. This effort will involve reviewing existing data elements, creating appropriate classifications, cleansing and transforming data, and building a comprehensive data classification library.

Project costs include procurement of an AI platform, implementation consulting services to help setup the platform and end-user training, as well as consulting and backfill staffing for the data identification, classification and cleansing.

Project Evaluation and Analysis

City staff are increasingly adopting AI tools, many of which are being integrated into existing systems. Without a governance platform, ITD lacks the ability to identify duplicate AI tools in use, determine whether tools are being independently purchased and installed, or maintain an inventory of AI tools to share across departments for broader use.

In addition, there is currently no coordinated AI end-user training program between the Human Resources Department and ITD. This project would enable the development and delivery of up-to-date, ongoing training content to support City staff in the responsible and effective use of AI.

The City's data is also not currently cleansed or consistently classified. For example, address data is represented in multiple formats and fields across various systems. Without standardized, clean data, the use or development of AI tools becomes more complex and may yield inaccurate or conflicting results. As part of this project, consultants will help identify key data elements for classification and cleansing. The City will then establish a standardized data classification library for use across departments.

Fiscal Impact

The total project cost is \$350,000 and with ongoing operating cost of \$125,000 annually.

837490 - 2025 Fourth of July Celebration Event

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2025/26	Category:	Special	Project Manager:	Laura Jammal

Project Description/Scope/Purpose

The City of Sunnyvale is planning a Fourth of July Celebration Event for 2025 as in years past. In 2024, a new type of event included a drone show at Baylands Park drawing an unexpected crowd size of approximately 8,000-10,000 people.

Council requested staff research the feasibility and analyze the cost to host a Fourth of July celebration event for Sunnyvale residents. The purpose of this report is for Council to review associated costs, determine feasibility and interest, and allocate required funding to host a Fourth of July celebration event in Sunnyvale in 2025. This year's Fourth of July celebration event will not feature a drone show due to higher cost, lack of location for an event of that scope, limited staffing resources and inability to secure mutual aid from neighboring cities on the Fourth of July due to competing events, but will focus on a family style celebration throughout the downtown area.

Project Evaluation and Analysis

July is Park and Recreation Month, and this year's theme is "Build Together, Play Together". This theme celebrates the many ways park and recreation professionals across the country foster a sense of belonging in their communities by providing welcoming and inclusive programs, essential services for all ages and abilities, and safe, accessible spaces to build meaningful connections. The proposed celebration event would take place in the Sunnyvale downtown area as a free, family-friendly event designed to bring the community together to celebrate each other, the City of Sunnyvale, and our nation's independence. The event will run from the late morning to the late afternoon. An alternate site would be the Civic Center, where many City events are held. The celebration will include:

- Carnival games
- Crafts and activities for children
- A celebration of the 75th Anniversary of the Department of Public Safety
- Entertainment stage

In addition to the cost of the entertainment, there will be internal service costs, specifically staff overtime and contract staff costs, for the following supporting departments: Library and Recreation Services Department, Department of Public Safety, and Department of Public Works (Streets and Parks), as well as rental equipment for stages, booths, etc.

The estimated cost for a 2025 Fourth of July family fun celebration event is \$500,000. This amount includes staffing, safety services, traffic control, marketing, carnival games and activities, craft supplies, music and sound projection, and rentals for transporting supplies and equipment.

Fiscal Impact

Budget Modification No. 19 has been prepared to appropriate \$500,000 from the General Fund Service Level Set Aside to a new project – Fourth of July Celebration Event. Staff will include the ongoing component for consideration with the FY 2025/26 Recommended Budget along with proposed resources for increased service levels around special event programming.

837580 - SMARSH + eDiscovery Implementation (PRA)

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2027/28	Category:	Special	Project Manager:	Dhiren Gandhi

Project Description/Scope/Purpose

Through this project, the City will establish an archival and electronic discovery system to improve the management of public records requests in compliance with the Public Records Act (PRA). SMARSH automatically archives electronic communications across key platforms. The integrated eDiscovery tool will enhance the City's capability to search, filter, and retrieve records efficiently. This project will reduce legal risk, increase transparency, and streamline the public records request process through automation, centralized data management, and improved compliance.

Project Evaluation and Analysis

The SMARSH + eDiscovery Implementation project aims to improve the City's ability to manage public records requests by implementing a Citywide archival system and an electronic discovery (eDiscovery) solution. This initiative will streamline the process of capturing, storing, and retrieving electronic communications, including emails and messages, in compliance with the Public Records Act (PRA). By deploying the SMARSH platform and integrating it with existing City systems, the project will reduce manual efforts, enhance data retrieval accuracy, and ensure legal compliance. The eDiscovery tool will provide advanced search, filtering, and legal hold features, allowing for efficient responses to public records requests. Additionally, the project will address data retention policies and improve overall transparency, reducing the risk of legal and compliance issues. The system will enhance operational efficiency, facilitate data governance, and provide a centralized approach for managing records across departments.

Fiscal Impact

The total project cost is \$560,177, all of which is funded through 7027 - Technology & Communications Services Fund (replacement). This amount covers licensing and replacement costs.

The total annual operating cost is \$152,467, of which \$127,056 is funded from the current 7027 - Technology & Communications Services Fund operating budget. This covers ongoing maintenance and support.

Please refer to the attached document for a detailed cost breakdown.

837610 - Core IT Network Completion (Smart City - 3)

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

Implement a Secure Access Service Edge (SASE) solution to enhance network security and efficiency while upgrading connectivity and bandwidth for remote sites to meet current and future demands. We are seeking a solution that will integrate advanced security capabilities, provide regular updates to address emerging threats, and ensure seamless compatibility with existing systems.

Project Evaluation and Analysis

With a hybrid workforce and the rise of cloud applications, addressing evolving security threats and increasing network bandwidth for remote sites is essential. Implementing SASE and enhancing bandwidth will provide greater visibility, strengthened security, and improved network performance.

Fiscal Impact

Costs for implementation include hardware, subscription licensing, network provider costs, and backfill of City staffing. The ongoing costs include hardware support, subscription licensing, network provider costs, and upgrade/replacement costs.

Funding Sources

Technology and Communication Services Fund

832650 - Peery Park Housing Study

Originating Year:	2018	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Shaunn Mendrin

Project Description/Scope/Purpose

At the time of adoption of the Peery Park Specific Plan, the Council directed staff to study the potential of additional housing locations in the Plan area within a specified time frame. In order to accomplish that task, the Peery Park Specific Plan (PPSP) will need to be amended and an additional environmental review completed, since the housing location options were previously considered for office space.

Project Evaluation and Analysis

The revised PPSP will require consideration of appropriate housing sites within the plan area, decision on how many units, how the housing could impact the square feet of office space in the area, and environmental and operational analyses.

Fiscal Impact

\$200,000 estimated for the study. Funded by the General Fund with costs recovered through development fees. The budget modification considered by City Council on January 23, 2018 was not approved. Council action was to have a study paid for by specific property owners whose properties' land use designations would be studied for possible amendment.

THIS PAGE IS INTENTIONALLY BLANK

ADMINISTRATIVE FACILITIES

THIS PAGE IS INTENTIONALLY BLANK

ADMINISTRATIVE FACILITIES

This section includes all projects that address the City's administrative facilities, including the Civic Center, Community Center, Senior Center, Libraries, Public Safety and Fire Station buildings, Corporation Yard, and 725 Kifer Road. Also included are City-owned properties that were purchased for potential redevelopment purposes.

Administrative Facilities projects are primarily funded by the General Fund. Rental income from City-owned property also provides revenue for the maintenance and rehabilitation work for those specific properties; however, these revenues will cease when the properties are developed or sold.

MAJOR ADMINISTRATIVE FACILITIES PROJECTS

Civic Center Phase 2 Planning – Main Library. The Civic Center Master Plan, as adopted by the City Council, included a new Main Library in Phase 2. The proposed library was planned to be funded through a general obligation bond. City staff were directed to develop a ballot measure, and following the completion of the conceptual design, the Council approved placing the measure on the ballot. The bond measure (Measure E) appeared on the November 5, 2024, election ballot but did not achieve the required two-thirds majority for passage. As a result, City staff are now evaluating options for next steps.

Lakewood Branch Library Facility. This project funds the construction of a branch library facility in the Lakewood Village neighborhood to increase access to library services for those living in north Sunnyvale, improving the quality of life for residents in the community. The planned completion of the project is December 2025.

Renovations to 922 East California Avenue. The property purchase was finalized in FY 2023/24. This property is designated to provide additional municipal space for City operations. Funding from this project will support tenant improvements, ensuring the space is well-equipped for City employees. By utilizing this property, the City will avoid the cost of constructing a new building to accommodate staff currently working in temporary structures, resulting in substantial savings.

Corporation Yard Master Plan – Phase 1. This project is based on the recommendations of the Corporation Yard Master Plan, as reviewed by the City Council in a January 2023 study session. The Corporation Yard buildings are at the end of their useful life and are currently at full capacity. All buildings were identified for replacement based on the deficiencies identified in the assessment and the need to create room for staffing and equipment growth. The project was divided into three phases based on functional needs, constructability, and minimizing disruption for a working Corporation Yard. The first phase involves the replacement of the Fleet Maintenance Building. The new building will be constructed in the current employee parking area along California Avenue. Once completed, the new Fleet Maintenance Building will be LEED Gold equivalent and will create additional capacity for future growth. Phases 2 and 3 have been added to the unfunded list pending funding availability and project delivery capacity.

Fire Station 2 – New Construction. Based on the recommendations of the Fire Station Master Plan, this project provides for the design and construction of a new Fire Station 2,

including accommodations for a temporary fire station during construction. Fire Station 2, along with the training center on the site, is the highest priority for correcting deficiencies at all six of the City's fire stations. The single-story fire station, Self-Contained Breathing Apparatus, and classroom building will be rebuilt and consolidated into a sustainably designed two-story structure. Once completed, the new Fire Station 2 will meet current best practices and create additional capacity to help maintain services as other stations are remodeled.

Remodel of Fire Stations. A total of \$17.1 million starting in FY 2025/26 has been programmed across the twenty-year plan for the remodel of Sunnyvale Fire Stations 1, 3, 4, and 6. Consistent with the lower cost recommendation in the Fire Station Master Plan, these projects provide for the design and construction of substantial renovations of the City's four fire stations to incorporate key best practices.

818700 - Corporation Yard Buildings - Rehabilitation

Originating Year:	1997	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Scott McElroy

Project Description/Scope/Purpose

Due to significant age, the Corporation Yard buildings require renovation or upgrades that often include safety improvements or equipment replacements, and repairs due to aging infrastructure. Deficiencies in these buildings are identified by Facility Services and cost estimates are based on past experience, industry knowledge, and/or professional estimates.

In FY 2023/24 a portion of annual funding will be utilized to make needed improvements to the Fleet Building restroom. In FY 2025/26 the locker room shower and warehouse bathroom improvements are scheduled for remodel/upgrades.

Project Evaluation and Analysis

Corporation Yard facilities are regularly evaluated. Due to the type and diversity of services occurring at this facility, combined with the number of buildings, this site has an ongoing need for a multitude of critical improvement/repair projects to maintain a safe and functional environment. The Corp Yard Master Plan's was complete in FY 2023/24. The findings will determine the work that needs to be completed.

Fiscal Impact

Funding is from multiple sources including the General Fund, the Water Supply and Distribution Fund, the Wastewater Management Fund, and the General Services Fund. No additional operating costs are associated with this project.

Funding Sources

General Fund 47.7%, General Services Fleet 26.6%, General Services Facilities 10.8%, Water 9.9%, Sewer 5.0%

819610 - Public Safety Buildings - HVAC

Originating Year:	1998	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Richard Chen

Project Description/Scope/Purpose

This project provides for the replacement of heating, ventilation, and air conditioning (HVAC) systems for the City's Public Safety buildings. The Public Safety Headquarters' mechanical system was replaced in FY 2011/12. Remaining systems due for replacement are in four fire houses (1, 3, 4, and 6). Systems requiring replacement are identified by inspections and manufacturer specifications on equipment life spans. The systems in fire stations 1,4, and 6 were replaced in FY 2013/14, and fire stations 2 and 3 were replaced in FY 2015/16.

In FY 2021/22, City Council approved a project to fund the rebuild of fire station 2, and add future remodel projects for fire stations 1,3, 4, 5, and 6. Depending on the timeline of the future fire station remodels, the HVAC replacement timeline may change.

In FY25/26, staff will replace the HVAC system at the Department of Public Safety (DPS) headquarters to address the aging unit's ongoing maintenance challenges. This upgrade is a high-priority repair to support the operational needs of DPS headquarters. The scope of work includes a comprehensive site assessment to evaluate existing conditions and determine the best approach for system replacement. The project will consist of construction, from installation to commissioning.

In fiscal year 2033/34, the city will design and construct equipment replacements for Fire Stations 1, 4, and 6. In fiscal year 2035/36, the city will complete similar upgrades for Fire Stations 3 and 5. The city plans to replace equipment at Fire Station 2 in fiscal year 2045/46.

Project Evaluation and Analysis

The replacement schedule is based on the age of the systems and data gathered from Facilities' work order system. This equipment has an expected life of 20 years. If the project is not completed, users of the buildings will experience discomfort, and the energy efficiency of the equipment will continue to decline.

Upon completion of the Fire Station Master Plan, timing of implementation and scope of each fire station's HVAC projects may be revised.

Fiscal Impact

This project is funded by the General Fund. If the HVAC system is not replaced the energy efficiency will continue to decline. The funds in FY 2031/32 were reduced to add money in FY 2025/26 for DPS Headquarter HVAC System Repairs.

Funding Sources

General Fund

820000 - Corporation Yard Buildings - HVAC Replacement

Originating Year:	1999	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Scott McElroy

Project Description/Scope/Purpose

This project will replace aging heating, ventilation, and air conditioning (HVAC) systems at the Corporation Yard complex. In FY 2025/26, the City will purchase and install new HVAC units for the SCADA and key card system offices. In FY 2026/27, the Facilities division will replace the locker room and sign shop HVAC systems. The facilities team will procure and install the units using in-house resources, which is a proven, cost-effective model for HVAC replacements. Inspections, equipment failures, and manufacturer-recommended life spans show that these systems need replacement. The typical HVAC system lasts about 20 years.

Project Evaluation and Analysis

The replacement schedule is based on the age of the systems and data gathered from Facilities' work order system. This equipment has an expected life of 20 years. If the project is not completed, users of the buildings will experience discomfort, and the energy efficiency of the equipment will continue to decline. The Corp Yard Master Plan's anticipated completion in FY 2023/24. The findings will determine the work that needs to be completed.

Fiscal Impact

Funding is from the General Fund, Water Supply and Distribution Fund, Wastewater Management Fund, and General Services Fund.

821010 - Maintenance of City Owned Properties - Downtown

Originating Year:	2000	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

This project provides maintenance and repairs for City-owned rental and vacant properties in the Downtown area. The properties 101 West Olive Avenue and 344 Charles St.

Specifically, the project provides funding for roofing, flooring, plumbing, fencing, and electrical system repairs, as well as for general maintenance, including landscaping, debris removal and security.

Project Evaluation and Analysis

This project is necessary to maintain the health, safety, and condition of City-owned properties that produce income.

Fiscal Impact

This project is funded by rental income on the properties.

Funding Sources

General Fund

824780 - Upgrading of Fuel Stations

Originating Year:	2005	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

The project is to complete scheduled replacement of underground fuel storage tanks and fuel dispensers at City operated fueling stations. The City has three vehicle fueling facilities located at the Corporation Yard, City Hall and Golf Course for purposes of refueling City owned vehicles. Replacement of the underground fuel tanks at the Sunnyvale Municipal Golf Course was completed in FY 2017/18 and Corporation Yard in FY 24/25. Replacement of the City Hall fueling station will be designed in FY 2024/25 and constructed in FY 2025/26.

The three underground fuel tanks at City Hall consists of two unleaded gasoline tanks and one diesel. The size of the new tanks will be determined during design based on recent fuel consumption data and City's future plan to operate gasoline fueled vehicles.

Project Evaluation and Analysis

All tanks are operationally sound and their life expectancy has been extended with the agreement and understanding of the City's Hazardous Materials Coordinator, the City's fuel systems maintenance provider, and the City's third-party tank inspector. Initial valuations for this project did not include upgrades to the existing fuel dispensing system, which are now (10 years later) necessary. Upgrading these components will generate measurable operational cost savings. The existing system, on average, costs approximately \$2,000 yearly for monitoring, inspections and permitting. An average cost savings of \$600 yearly for repair maintenance and parts may be unnecessary with the upgraded system. These decreases in operational costs can be applied to future systems upgrades and unscheduled maintenance costs.

Fiscal Impact

The project is funded by internal service charges. The City expects cost savings from the reduced monitoring and annual certification/permit costs. A budget modification of \$285,000 from Budget Stabilization Fund Reserve was approved by City Council on January 9th, 2024 to award the construction contract.

825570 - 239 - 241 Commercial Street Property Maintenance

Originating Year:	2006	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

The City purchased the 239-241 Commercial Street property in January 2003 for the expansion of the City's Corporation Yard. The property is a commercial duplex with 2 units: 239 and 241, property 239 is not leased as it is in very poor condition and requires some structural repairs. It is currently being used for storage by the City. Property 241 and the yard around the property is leased to a single tenant. It will continue to be leased until the corporation yard expansion construction begins.

Project Evaluation and Analysis

This project is necessary to maintain City-owned property to keep it in a condition that is satisfactory for leasing to continue generating revenue. The Corp Yard Master Plan's anticipated completion in FY 2023/24. The findings will determine the work that needs to be completed.

Fiscal Impact

This project is funded by revenues the City receives from the current leases. Property 241 generates \$7,423 monthly rental income.

Funding Sources

The project is funded from rental revenue.

829140 - Fire Station Electrical System and Generator Replacement

Originating Year:	2012	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project is to complete scheduled replacement of emergency generators and electrical systems at four fire stations (Fire Stations #1, 3, 4, and 6). Replacement of emergency generators also include replacement of underground fuel tanks, transfer switches, and other associated components. The emergency generators are expected to be replaced in kind but may need relocation due to changes in building codes since the existing equipment were installed. Electrical upgrade includes replacement of main breaker, panel boards, and associated electrical connections

The funds in project 830580 - Emergency Generator Installation, were moved into this project to combine the emergency generator and electrical upgrade in one project. The funds in FY 2024/25 are for the project design and funds in FY 2025/26 are for construction.

Project Evaluation and Analysis

This project will replace necessary assets for critical facility serving for the safety of the public. Many components included in this project are well past their useful life and are in risk of failing if they are left alone.

The Fire Station Master Plan (21-0534) was approved by Council FY 2021/22. The findings determine that Fire Station 2 needed a complete rebuild. Fire Station 2 was removed from this project and the all work is in project 835890 - Fire Station 2 - New Construction.

Fiscal Impact

This project is funded by the General Fund.

830490 - Fremont Pool Infrastructure Improvements

Originating Year:	2013	Project Type:	Administrative Facilities	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Jesus Raygoza

Project Description/Scope/Purpose

Fremont Union High School District (FUHSD) and the City are in a shared-use agreement for the Fremont High School swimming pool. The current agreement runs through 6/30/2025 and is under review as of Dec. 2024. The City shares 50% of all costs for the swimming pool with FUHSD. The work is performed by the school district and the costs include equipment replacement, infrastructure upgrades, utilities, and district staff time. This project is for replacement of Fremont Pool mechanical equipment and infrastructure upgrades to the pool. Funding listed in future years is for equipment and infrastructure upgrades, and estimates are based on historical replacement needs.

Agreement with FUHSD expires June 30, 2025 and is under review as of January 2025. Project will be updated once a new agreement is reached.

Project Evaluation and Analysis

City recreation staff has received notice from FUHSD of upcoming equipment replacements and infrastructure improvements. While the school district is responsible for all pool and equipment repairs and replacement, the City reimburses the district 50% of the costs.

Fiscal Impact

Based upon the agreement with FUHSD, the City will reimburse the school district for project-related costs. The costs include equipment replacement, infrastructure upgrades, utilities, and district staff hours. Department of Library and Recreation Services staff will be responsible for reviewing, verifying, and approving invoices for payment and change orders, and Department of Finance staff will process approved invoices.

A ten-year replacement/maintenance schedule is attached but will need to be updated once a new agreement is in place.

Funding Sources

Park Dedication Fund and FUHSD by sharing costs 50/50. By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/ (savings) will be included in the operating budget.

830560 - Fremont Pool House Infrastructure Improvements

Originating Year:	2013	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Scott McElroy

Project Description/Scope/Purpose

Fremont Union High School District (FUHSD) and the City entered into an agreement for maintenance of the pool house in 2002. This project provides for major infrastructure improvements to the Fremont High School pool house building that are more extensive than normal routine maintenance. Joint project completed in FY 2014/15 addressed deficient shower drains, inadequate air flow inside the two locker rooms, and damages to building infrastructure as a result of the deficiencies. In FY 2028/29, the project will replace the hot water heater, main mixing valves, shower control fixtures, water conditioner, high-efficiency broiler, and lighting fixtures.

Project Evaluation and Analysis

The most recent repairs addressed ongoing safety concerns to protect the building's infrastructure. Patrons heavily use the pool house while participating in City-operated aquatic programs. Infrastructure upgrades are tentatively scheduled every 15 years.

Fiscal Impact

The City's portion of the project cost is funded by the Park Dedication Fund. By State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Funding Sources

Park Dedication Fund

Plans and Goals

CC - Community Character - CC-4: Accessible and Attractive Public Facilities

CC - Community Character - CC-12: Maximize Access to Recreation Services, Facilities and Amenities

830570 - Fire Training Tower Structural Inspection

Originating Year:	2013	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Scott McElroy

Project Description/Scope/Purpose

This project provides for inspection and documentation of the structural integrity of the City's Live Fire Training Tower located at Fire Station 2. National Fire Protection Association (NFPA) regulation 1403 recommends a 10-year structural inspection of the facility to determine if damage to the concrete building has occurred due to live fire training. The inspection will require removal of steel wall coverings and concrete core sampling of the three levels of live fire rooms to measure the structural integrity of the facility. As part of this inspection, it is anticipated that some concrete repair due to coring activity, repairs to concrete surface cracks, and correction of exterior surface rust due to water penetration to reinforcement steel bar ties. The first 10-year inspection and related repairs were completed in FY 2014/15. Funding for future inspection and estimated repairs is shown in following 10-year spans.

Project Evaluation and Analysis

The five-story concrete Fire Training Tower is a facility for county-wide firefighter training. The Sunnyvale tower is over 10 years old and was inspected and repaired in FY 2014/15. Future inspections are scheduled for FY 2024/25 and FY 2034/35. Delaying future inspections could prolong detection of deterioration of the concrete structure and result in larger repair costs and potential safety violations.

Upon completion of the Fire Station Master Plan, timing of implementation and scope of the project may be revised.

Fiscal Impact

This project is funded by the General Fund.

Funding Sources

General Fund

830580 - Emergency Generator Installation

Originating Year:	2013	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2030/31	Category:	Infrastructure	Project Manager:	Gaku Watanabe

Project Description/Scope/Purpose

This project provides for the scheduled replacement of emergency generators at City facilities. Underground fuel tanks, control panels, and transfer switches associated with building generators.

Funds budgeted for construction of the Annex generator was transferred to the Public Safety Generator project. Funds in FY 2025/26 are for the Senior Center, Community Center Theater, and Corporation Yard. The generators at the Raynor and Hamilton well sites were shifted to FY 2025/26 to coincide with the work taking place at the Performance Art Center in FY 2025/26, to minimize the impact to the complex over multiple years. Funds in FY 2026/27 are to replace the portable water trailer generator and funds in FY 2030/31 are for emergency communications at the Corporation Yard.

On June 15, 2021, City Council directed staff to move the funds from FY 2022/23 and combine them with the funds in FY 2024/25.

The cost for the fire station generators (FS 1,3, 4 & 6) were moved from this project into Project 829140 - Fire Station Electrical Systems and Generator Replacements.

Project Evaluation and Analysis

Emergency generators are a requirement for many City buildings and other critical assets. Prolonging this project could lead to equipment failures at critical moments and may jeopardize the safety of City employees and members of the public. In FY 2018/19, the library generator and fire station generators for Fire Stations 1, 2, 3, 4, and 6 were scheduled to begin design, but has been rescheduled to coincide with other electrical upgrades planned for the Fire Stations. Due to changes in building codes since the existing generators were installed, this project will require relocation of the generators on site rather than a straight forward like-kind replacement. The generator for Fire Station 2 is no longer needed, since the creation of Project 835890.

Fiscal Impact

This project is funded by the General Fund, Park Dedication Fund, Water Supply and Distribution Fund, Wastewater Management Fund, and the General Services Fund.

Funding Sources

General Fund, Park Dedication Fund, Water Supply and Distribution Fund, and the General Services Fund. All funding will be used for design and construction services. For the Park Dedication funded portion by State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Plans and Goals

830600 - Lakewood Branch Library Facility

Originating Year:	2013	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project funds the construction of a branch library facility in the Lakewood Village neighborhood in order to increase access to library services for those living in north Sunnyvale by making it more convenient for residents to visit. On November 19, 2013 (RTC 13-275), Council authorized the \$14.05 million sale and purchase agreement between the City of Sunnyvale and Stratford School, Inc. for the Raynor Activity Center. Approximately \$13.5 million of the proceeds from the sale are allocated for the capital project for design, construction, and startup costs of a new branch library located at Lakewood Park. The initial estimate of a new library was roughly 17,000 square feet that has now been updated to 20,000 feet.

On 1/14/2020, the City Council approved a joint use agreement with Sunnyvale School District (SSD) and Fremont Union High School District (FUHSD) with RTC 20-0057. Both districts have agreed to contribute a maximum of \$3.0 million each towards construction. The Friends of the Sunnyvale Library have also committed to contributing \$500,000 for furniture, fixtures, and equipment; bringing the current available budget for design and construction to \$27.3 million. Project design started in FY 2019/20 with construction scheduled to begin in FY 2023/24.

Project Evaluation and Analysis

Residents living in north Sunnyvale are the only residents who must travel more than two miles to access library services. In fact, many residents in north Sunnyvale live over four miles from any library. As a result, the Lakewood area has the lowest percentage of residents with Sunnyvale library cards than any neighborhood in Sunnyvale. Furthermore, there is a significant concentration of seniors and youth in this area - the age groups tending to make the most use of library services, but also the most restricted in terms of mobility. As such, some of the City's residents with the most to gain from library services have the most difficult time accessing those services. This project will address this issue and improve the quality of life for residents.

Fiscal Impact

This project is funded by proceeds from the sale of the Raynor Activity Center, the Park Dedication Fund, the General Fund, and contributions from the Sunnyvale School District, Fremont Union High School District, and Friends of the Sunnyvale Public Library.

As of FY 2020/21 Library positions (two each part-time Library Specialists I and III and one full-time Administrative Librarian) have been shifted from the Department's operating budget to project operating costs.

Funding Sources

General Fund, Sale of Raynor Activity Center, Park Dedication Fund, Partner Contributions

831340 - Civic Center Modernization

Originating Year:	2017	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

The public buildings comprising the City's Civic Center are several decades old, too small, and poorly configured to meet the service demands of Sunnyvale today. On September 2, 2014, City Council made improvements to the Civic Center one of its strategic priorities. Council direction called for comprehensive community engagement to plan the Civic Center project prior to determining next steps.

In 2015 the City completed a feasibility study and conducted extensive community outreach on the project. Key outcomes included direction from Council to retain ownership of all land at the Civic Center and adoption of a Needs Assessment, Vision Statement, and Success Criteria. In 2016 the City developed a preliminary financing strategy and conducted a community survey to test the viability of a bond measure to fund the project. Falling short of the two-thirds majority to pass a bond, Council directed staff to pursue the project using a phased approach with Phase 1 focused on replacing City Hall and making improvements to the Public Safety Building. In FY 2017/18 a campus-wide Master Plan was adopted, which created a long-term vision for the campus and further defined planned improvements in the first phase of construction.

Design services for Phase I of the Civic Center Master Plan was approved by Council FY 2018/19. In August 2019, Council approved the schematic design and directed staff to proceed with design and construction procurement for Civic Center Phase I. In October 2020, Council awarded the construction contract of a new 119,874 square foot, four story, LEED Platinum, Net Zero Energy City Hall, a new 17,450 square foot, two story, LEED Gold Equivalent Emergency Operation Center, 17,450 square foot renovation of the existing Public Safety Building and site improvements that include 6 acres of open space, an outdoor amphitheater and Civic Plaza for \$174,117,000. Construction has begun and estimated completion is scheduled in FY 2023/24.

Project Evaluation and Analysis

The need to renovate the Civic Center Campus buildings, and to address issues related to functionality, staff adjacencies, and public service delivery are well-documented in RTC 12-0292 and 14-0746. The challenge of the existing City Hall campus is lack of adequate space, a need for improved community meeting space, a need for efficient, functional, and sustainable design, and a need to improve the existing infrastructure.

Fiscal Impact

Debt service will be paid by ongoing rent collected from all funds including enterprise funds. Total project costs also include position costs for one Administrative Aide and one Senior Engineer. Preliminary work indicates that the project will likely fully expend the Park Dedication allocation and partially expend the Transportation Impact Fee portion, with the majority of the savings coming to the General Fund portion of the project. Staff will closely monitor the expenditures, drawing from the appropriate funding sources as progress payments are made, and return funds to the various funding sources upon project closeout.

Funding Sources

General Fund, General Services Fund, Enterprise Funds, Park Dedication Fund, Infrastructure Fund, and various other Funds. For the Park Dedication funded portion by State law, Park Dedication funds are to be used to develop new or rehabilitate existing neighborhood or community park or recreational facilities. Routine maintenance and operating costs/(savings) will be included in the operating budget.

Plans and Goals

CC - Community Character - CC-1: Distinguished City Image

CC - Community Character - CC-3: Well-Designed Sites and Buildings

832590 - Installation of Charging Stations for Electric Vehicles

Originating Year:	2018	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Scott McElroy

Project Description/Scope/Purpose

This project will expand the City's electric vehicle (EV) charging infrastructure to support city-owned cars. The project included installing two charging units with four ports at the Corporation Yard in FY 2019/20, and three stations with six ports near the fuel pumps at the City Hall parking lot in FY 2021/22. After completing the DPS generator replacement project, the City plans to install three more charging stations in the rear parking lot at the Department of Public Safety (DPS) headquarters. Once PG&E adds permanent power to the DPS Annex building, they will install additional EV chargers near the fuel pumps at City Hall. The additional EV charging units will be completed by FY 2025/26. Staff are also assessing the feasibility of installing two additional EV chargers at the Corporation Yard, dependent on the existing electrical infrastructure.

Project Evaluation and Analysis

As the City transitions to a greener vehicle fleet, it needs the proper infrastructure to recharge electric vehicles (EVs) between uses. Installing charging stations at strategic city-owned locations will give vehicles easy access to recharging when needed. The City plans to grow its EV fleet to 28 fully electric vehicles by 2025. The installation cost includes purchasing the charging units, electrical infrastructure, and installation.

The charging units are expected to last ten years, depending on usage. Upon completion of the project, staff will propose a replacement project in the next CIP cycle to cover upgrades or replacements every ten years to keep the charging stations in good working condition.

Fiscal Impact

This project is funded by the General Fund. There will be operating cost that will be programmed for FY 27/28.

Funding Sources

General Fund

832690 - Library Restroom Repairs

Originating Year:	2018	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

Project design to begin soon with the completion of the Library Plumbing Study (832680). FY 2021/22 carryover of \$420,000 is planned for repairs listed in the Library Plumbing Study, account for inflation and market escalations, as well as have enough contingency for any unforeseen conditions related to these repairs. The study has identified five areas for repair, consisting of plumbing lines, cleanouts and drains.

Project Evaluation and Analysis

Restroom repairs are required to maintain a safe environment for patrons and staff.

Fiscal Impact

Project costs have been adjusted during the carryover process to only do basic repairs to the bathrooms as the Civic Center Phase 2 Planning - Main Library project (834710) will address additional work required. No additional operating budget is required.

833750 - Public Safety Emergency Generator Replacement

Originating Year:	2018	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

The project is to provide reliable backup power to the Department of Public Safety (DPS) building at the City Hall campus. The existing generators that service this building have been in service for approximately 34 years, 14 years beyond the lifecycle requirements for City Fleet replacement scheduling. They have recently experienced problems that impacted reliability. The scope of the project includes the following: rental of a portable emergency generator unit(s) and wiring to have onsite at DPS as a backup electrical power source; feasibility study to evaluate existing conditions, develop scope options for both interim and permanent solutions, and provide cost estimates for each option; design and construction for both the interim and permanent generator solutions to provide reliable temporary generator power to the entire DPS Building in the event of an unplanned PG&E power outage.

Project Evaluation and Analysis

This project is necessary to evaluate and address reliability issues with the existing emergency generator units. The ultimate goal is to provide immediate, stable, and automatic temporary backup electrical power to the entire DPS building including emergency and non-emergency functions in the event of an unplanned utility outage.

This is a one-time replacement.

Fiscal Impact

This project is funded by the General Fund and funds generator replacement as well as the rental of portable generators for reliable backup power until the permanent solution is in place.

Once the project is complete, funds will no longer be needed for rental costs for portable generators, and there are no anticipated operating impacts.

834350 - 344 Charles Street Renovation

Originating Year:	2019	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

This project funds renovation, upgrades, and remodeling of the property to bring it to an adequate condition for rent. Since this house is not contiguous with the rest of the Charles street properties it will not be included in the low income housing development. Due to its close vicinity to City Hall, retaining the house for future municipal purposes would be ideal. It is expected that once remodeled this property could generate a monthly rent of \$4,000 to \$5,000 per month, which would pay back for the renovations in less than two (2) years.

Project Evaluation and Analysis

This project is necessary to bring this property up to a livable standard to become an income-producing property. Staff estimates that the rental income will pay back the renovations in less than two years.

Fiscal Impact

It is anticipated that this project will be funded by rental income. It is expected the project also covers operating costs during the renovation period.

Funding Sources

General Fund

834710 - Civic Center Phase 2 Planning - Main Library

Originating Year:	2019	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Marlon Quiambao Jr.

Project Description/Scope/Purpose

Civic Center Master Plan as adopted by City Council in September 2018 included a new Main Library as Phase 2. The proposed library is 118,000 square feet and has an estimated (2017) cost of \$135 million. This project funds a feasibility study, conceptual design, and ballot preparation. Based on City Council's discussion at the February 2019 Council Strategic Session, the target for funding this project is the 2024 Election. In FY 2021/22 a feasibility study was initiated. In FY 2022/23, the architectural and site planning began for the conceptual design. Ballot preparation and voter polling took place in FY 2023/24. In May 2024, City Council voted to pursue a new Main Library versus another renovation. City staff were directed to develop a ballot measure for a general obligation bond. Conceptual design concluded with Council approving the ballot measure. Library Bond Measure E appeared on the ballot on the November 5, 2024, election and did not reach the necessary two-thirds threshold to pass. City staff is evaluating options for next steps.

Project Evaluation and Analysis

The Civic Center Modernization Master Plan was adopted in 2018. The adopted Master Plan was comprised of three phases. Phase 1 (831340) included a new City Hall, a Public Safety building renovation and addition including a new Emergency Operation Center (EOC), and site improvements. Phase 2 includes a new Main Library, playground, and site improvements. The goal of this project is to further analyze the concepts laid out in the Master Plan. This is essential so that the City can fully understand the scope, schedule, and budget for the project.

Fiscal Impact

Initial funding (\$1,000,000) for the planning phase is funded by the General Fund. \$15,000,000 has been set aside in the Infrastructure Fund in FY 2024/25 to serve as the City's initial investment for implementation of the project. City Council approved Budget Modification No. 5 appropriating \$431,929.47 from the General Fund Budget Stabilization Fund Reserve to fund the project. This budget modification covers the shortfall of the initial \$1,000,000 that was identified with the award of contract to Group 4 Architects for professional services.

835510 - Maintenance of 725 Kifer Rd. (SCS Property)

Originating Year:	2021	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Special	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

This project provides for maintenance, security, and utilities for the site and building. Maintenance includes but not limited to roofing flooring, plumbing and electrical systems, general repairs, structural repairs, HVAC repairs, landscaping, drainage, and parking lot maintenance. Security including but not limited to, security guard services and monitoring, security lighting and cameras, fences, gates, and locks. Utilities including power, gas, water, and sewer. Part of the building is currently being leased. The building expenses will come out of the revenue.

Starting FY 2024/25 all maintenance costs will be moved to Program 14200 - Facilities Services.

Project Evaluation and Analysis

This project is necessary to maintain and secure the property from being deficient. Also any future early deterioration that might impact the ability to generate revenue from the property.

Fiscal Impact

The Project is funded from the General Fund. The funds are to provide for maintenance of the city-owned property. If the property isn't maintained it may be hard to rent and bring in sufficient revenue for the City.

835890 - Fire Station 2 - New Construction

Originating Year:	2022	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Stephen Ping

Project Description/Scope/Purpose

Based on the recommendations of the Fire Station Master Plan, this project provides for the design and construction of a new Fire Station 2. Fire Station 2 along with the training center on the site, is the highest priority for correction of all the City's six fire stations. The single-story fire station, Self-Contained Breathing Apparatus (SCBA) building, and classroom building will be rebuilt and consolidated into a sustainably designed two-story structure; that the locker rooms in the apparatus bay of the training tower be relocated to the new fire station and the training tower apparatus bay is restored; and that the paramedic trailer be relocated on or off site. It will be necessary for training functions to be temporarily suspended or moved off-site for the duration of construction. Once completed, the new Fire Station 2 will be code compliant, meet current best practices, and will create additional capacity to help maintain services as other stations are remodeled or reconstructed.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's six fire stations (five of which were built in the 1960s) was completed to review the existing conditions, current program requirements, and to assess the stations against current best practices for optimum operation and staff health and safety. With the exception of the Fire Training Tower Facility at Fire Station 2, the fire stations were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code. Based on the deficiencies identified, options for replacement or remodeling the deficient stations were presented. In both options, Station 2, including the training center, was identified for replacement as the highest priority. Following completion of the Fire Station 2 project, the estimated costs of other station projects will be updated and projects will be incorporated into the City budget.

Fiscal Impact

Building a new, more modern and efficient fire station may yield operating savings.

836210 - Corporation Yard Master Plan - Phase 1

Originating Year:	2023	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project is based on the recommendations of the Corporation Yard Master Plan, as reviewed by City Council in a January 2023 study session. It was determined that the site needs to be updated and modernized, with an eye towards future needs. The modernization was divided into three phases based on functional needs, constructability, and to accommodate a working Corporation Yard, in order to minimize disruption.

The first phase of the modernization involves replacement of the Fleet Maintenance Building. The new building will be constructed in the current employee parking area along California Avenue. The building will include space for Central Stores. The existing solar panels in this parking lot will be removed, and employee parking will be displaced, but otherwise the site can function normally. Upon completion, Fleet and Stores staff will be moved to the new building and the old building will be demolished, creating space for construction of Phase 2, a new Administration Building. Design will be done over a two year period and construction is expected to take 18 months. Once completed, the new Fleet Maintenance Building will be code compliant, LEED gold equivalency, and will create additional capacity for future growth.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's Corporation Yard, which was built in the 1950s, was completed to review the existing conditions and current program requirements, and to assess growth needs for optimum operation of the site. Buildings on the site were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code, but they are at the end of their useful life and currently at full capacity. Based on the deficiencies identified in the assessment and the need to create room for staffing and equipment growth, all buildings were identified for replacement.

Fiscal Impact

Recommendations implemented will result in additional infrastructure repair and upgrade costs. This project is funded by the General Fund, General Services Fund, Wastewater Management Fund and Water Supply and Distribution Fund.

Funding Sources

General Fund 47.7%, General Services Fleet Services Sub-Fund 26.6%, General Services Facilities Management Services Sub-Fund 10.8%, Water Supply and Distribution Fund 9.9%, and Wastewater Management Fund 5.0%

836300 - Fire Station 1 Remodel

Originating Year:	2022	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

Consistent with the lower cost recommendation in the Fire Station Master Plan, this project provides for the design and construction of a substantial renovation of Fire Station 1. The existing station is of sufficient size to incorporate key best practices including, but not limited to, a new kitchen, SCBA refilling room, ADA bathroom, ADA parking, cleaning stations, HVAC, fire sprinklers, painting, roofing and finish upgrades. The modular housing unit from the Station 2 reconstruction will be relocated to the rear of Fire Station 1 during construction and apparatus will continue to respond from the existing apparatus bay so service coverage will continue. Once completed, the renovated Fire Station 1 will be code compliant and meet or marginally meet current best practices.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's six fire stations (five of which were built in the 1960s) evaluated existing conditions, current program requirements, and assessed the stations against current best practices for optimum operation and staff health and safety. Except for the Fire Training Facility at Fire Station 2, the fire stations were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code. All stations, except Station 5, are recommended to be replaced or substantially remodeled. In either scenario, Station 2, including the training facility, was identified for replacement as the highest priority. The recommended sequence of addressing the other stations is as follows: Station 1, 4, 3 and 6. Following completion of the Fire Station 2 project, the estimated costs of other station projects will be updated, and projects will be incorporated into the City budget.

Fiscal Impact

The estimated total project cost for renovation of Fire Station 1, including design, is based on a FY 2021/22 estimate of \$4.4M. Alternatively, the station can be replaced on site for approximately \$28.2M in FY 2021/22 funding. Once the stations are programmed and schedules are established, the estimates, including escalation, should be adjusted to account for market conditions at the time of construction.

Project 818100 (Public Safety Building -Roofs) was cancelled, and \$30,000 from FY 2033/34 was moved to this project and added to FY 2026/27.

836310 - Fire Station 3 Remodel

Originating Year:	2022	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2029/30	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

Consistent with the lower cost recommendation in the Fire Station Master Plan, this project provides for the design and construction of a substantial renovation of Fire Station 3. Separate projects have been prepared for stations 3, 4 and 6, but the stations are identical so design savings may be possible if the three projects are completed simultaneously. Fire Station 3 can be remodeled to incorporate key best practices including, but not limited to, a new kitchen, ADA bathroom, ADA parking, cleaning stations, HVAC, fire sprinklers, painting, roofing and finish upgrades. An addition will be made to house a new exercise room. Personnel will stay in a modular housing unit at the rear of the station during construction. Apparatus will continue to respond from the existing apparatus bays for continued service coverage. Once completed, the renovated Fire Station 3 will be code compliant and meet or marginally meet most current best practices. Station 3 currently has a truck which does not fit into the apparatus bay with proper circulation access, not meeting best practice.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's six fire stations (five of which were built in the 1960s) evaluated existing conditions, current program requirements, and assessed the stations against current best practices for optimum operation and staff health and safety. Except for the Fire Training Facility at Fire Station 2, the fire stations were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code. All stations, except Station 5, are recommended to be replaced or substantially remodeled. In either scenario, Station 2, including the training facility, was identified for replacement as the highest priority. The recommended sequence of addressing the other stations is as follows: Station 1, 4, 3 and 6. Following completion of the FS2 project, the estimated costs of other station projects will be updated and projects will be incorporated into the City budget.

Fiscal Impact

The estimated total project cost for renovation of Fire Station 3, including design, is \$3.25M. Alternatively, the station can be replaced on site for approximately \$17M. Estimates are current as of FY 2021/22. Once the stations are programmed and schedules are established, the estimates, including escalation, should be adjusted to account for market conditions at the time of construction.

Project 818100 (Public Safety Building -Roofs) was cancelled, and \$575,000 from FY 2035/36 was moved to this project and added to FY 2029/30.

836320 - Fire Station 4 Remodel

Originating Year:	2022	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2032/33	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

Consistent with the lower cost recommendation in the Fire Station Master Plan, this project provides for the design and construction of a substantial renovation of Fire Station 4. Separate projects have been prepared for stations 3, 4 and 6, but the stations are identical so design savings may be possible if the three projects are completed simultaneously. Fire Station 4 can be remodeled to incorporate key best practices including, but not limited to, a new kitchen, ADA bathroom, ADA parking, cleaning stations, HVAC, fire sprinklers, painting, roofing and finish upgrades. An addition will be made to house a new exercise room. Personnel will stay in a modular housing unit at the rear of the station during construction. Apparatus will continue to respond from the existing apparatus bays for continued service coverage. Once completed, the renovated Fire Station 4 will be code compliant and meet or marginally meet current best practices.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's six fire stations (five of which were built in the 1960s) evaluated existing conditions, current program requirements, and assessed the stations against current best practices for optimum operation and staff health and safety. Except for the Fire Training Facility at Fire Station 2, the fire stations were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code. All stations, except Station 5, are recommended to be replaced or substantially remodeled. In either scenario, Station 2, including the training facility, was identified for replacement as the highest priority. The recommended sequence of addressing the other stations is as follows: Station 1, 4, 3 and 6. Following completion of the Fire Station 2 project, the estimated costs of other station projects will be updated and projects will be incorporated into the City budget.

Fiscal Impact

The estimated total project cost for renovation of Fire Station 4, including design, is \$4.4M. This includes \$567,000 for modifications to the nearby traffic signal to improve response and safety. Alternatively, the station can be replaced on site for approximately \$17M. Estimates are current as of FY 2021/22. Once the stations are programmed and schedules are established, the estimates, including escalation, should be adjusted to account for market conditions at the time of construction.

Project 818100 (Public Safety Building -Roofs) was cancelled, and \$575,000 from FY 2034/35 was moved to this project and added to FY 2032/33.

836330 - Fire Station 6 Remodel

Originating Year:	2022	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

Consistent with the lower cost recommendation in the Fire Station Master Plan, this project provides for the design and construction of a substantial renovation of Fire Station 6. Separate projects have been prepared for stations 3, 4 and 6, but the stations are identical so design savings may be possible if the three projects are completed simultaneously. Fire Station 6 can be remodeled to incorporate key best practices including, but not limited to, a new kitchen, ADA bathroom, ADA parking, cleaning stations, HVAC, fire sprinklers, painting, roofing and finish upgrades. An addition will be made to house a new exercise room. Personnel will stay in a modular housing unit at the rear of the station during construction. Apparatus will continue to respond from the existing apparatus bays for continued service coverage. Once completed, the renovated Fire Station 6 will be code compliant and meet or marginally meet current best practices.

Project Evaluation and Analysis

A Master Plan of Sunnyvale's six fire stations (five of which were built in the 1960s) evaluated existing conditions, current program requirements, and assessed the stations against current best practices for optimum operation and staff health and safety. Except for the Fire Training Facility at Fire Station 2, the fire stations were designed to be code compliant at the time of construction and are therefore not required to be upgraded to current code. All stations, except Station 5, are recommended to be replaced or substantially remodeled. In either scenario, Fire Station 2, including the training facility, was identified for replacement as the highest priority. The recommended sequence of addressing the other stations is as follows: Station 1, 4, 3 and 6. Following completion of the Fire Station 2 project, the estimated costs of other station projects will be updated and projects will be incorporated into the City budget.

Fiscal Impact

The estimated total project cost for renovation of Fire Station 6, including design, is \$3.25M. Alternatively, the station can be replaced on site for approximately \$17M. Estimates are current as of FY 2021/22. Once the stations are programmed and schedules are established, the Estimates, including escalation, should be adjusted to account for market conditions at the time of construction.

Project 818100 (Public Safety Building -Roofs) was cancelled, and \$575,000 from FY 2036/37 was moved to this project and added to FY 2035/36.

836400 - Locker Room Floor Refinishing - Fremont Pool

Originating Year:	2023	Project Type:	Administrative Facilities	Department:	210 - Library and Recreation Services
Planned Completion Year:	Ongoing	Category:	Infrastructure	Project Manager:	Tracey Gott

Project Description/Scope/Purpose

This project is for the removal of the current finish and resealing both locker room floors at Fremont Pool. Fremont Pool is designated for use by the public (25,638 Annual Lap Swimmers and Lesson Participants + Year-round Pool Rentals). This project is for the City's locker room area and not for Fremont High School, which has its own restrooms/locker rooms.

Project Evaluation and Analysis

The locker room floors at Fremont Pool have become eroded over time and the original finish is worn away in most places leaving the locker room/shower floors looking dirty and not well maintained. If this project is not completed there is potential for public pool users to slip and fall if not kept in better condition.

Fiscal Impact

\$15,000 in FY 2023/24 and \$10,000 every 5 years thereafter. Revenue generated at Fremont Pool will offset this project and other similar ongoing operation needs.

836790 - Acquisition of 922 E California Ave

Originating Year:	2023	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2024/25	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

To pay for the cost of acquisition and transfer of 922 E California Ave to the City of Sunnyvale including: the purchahse price of the property, escrow fees, appraisal fees, any due diligence investigations, including environmental testing and report review. One-time costs related to securing the property after acquisition, including rekeying and/or changing locks, fencing if needed, securing windows, camera monitoring, etc..

Project Evaluation and Analysis

Acquisition of Real Property for Municipal Purposes - Real property shall be acquired for current or future municipal purposes, and/or to benefit the community. The City shall acquire real property in accordance with Sunnyvale Municipal Code Chapter 2.07.

Fiscal Impact

The purchase price is \$4,356,800 with closing costs estimated at \$50,000. Funding is from the Infrastructure Reserve in the Infrastructure Fund.

837040 - 295 Commercial Street Property Maintenance

Originating Year:	2024	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

This project will also cover ongoing maintenance, operation and security of the property after acquisition. This includes but no limited to utilities, landscaping, alarm, security, gates and any general repairs or maintenance required to preserve the condition of the property including the yard area around it.

Project Evaluation and Analysis

It is estimated that \$50,000 annually will be needed for maintenance and security until the property is either leased or developed. The city will cover two years of maintenance and plans to lease the property. This project will be revised during the next CIP cycle to incorporate revenue.

Fiscal Impact

The General fund will cover the ongoing maintenance for two fiscal years with an annual budget of \$50,000. The city plans to lease the property after FY 2026/27. It is to soon to estimate the potential revenue.

837060 - Acquisition of 295 Commercial Street Property

Originating Year:	2025	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Capital	Project Manager:	Sherine Nafie

Project Description/Scope/Purpose

This project is for the Acquisition of 295 Commercial Street including the purchase price, appraisal costs, environmental investigations costs, due diligence costs, change locks/keys costs and initial account setup costs for utilities, security, etc.

Project Evaluation and Analysis

Acquisition of Real Property for Municipal Purposes - Real property shall be acquired for current or future municipal purposes, and/or to benefit the community. The City shall acquire real property in accordance with Sunnyvale Municipal Code Chapter 2.07. Also, the site's proximity to the Corp Yard will provide more options for flexibility and efficiency for the Corp Yard master planning and construction.

Fiscal Impact

The purchase price of \$4,550,000 is appropriated in the Infrastructure Renovation & Replacement Fund for this acquisition. Maintenance costs will be required and have been budgeted in project 837040 - 295 Commercial Street Property Maintenance.

837110 - Fire Station Carpet Replacement

Originating Year:	2024	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project was created to replace the carpet with laminate flooring at the City's fire stations. This project will fund the replacement of carpet at Fire Stations 3, 4, and 6. The renovation for the previously mentioned fires stations is planned to be done in the 2030s and due to the 24/7 operations with high foot traffic, the carpet is worn. The replacement of the carpet helps to create a cleaner and healthier environment for staff. The carpet replacement helps the City maintain a clean and professional looking facility that reflects a distinguished city.

The replacement of the carpet will be in FY 2025/26. Staff will establish a replacement cycle and update the cycle during the next Capital budget cycle.

Project Evaluation and Analysis

The carpet is worn and can create potential tripping hazards. The replacement reduces the hazards and promotes a cleaner and healthier facility.

Fiscal Impact

This project is funded by replacement funds that were originally planned to be used on the former City Hall campus.

837360 - Renovations to 922 E. California

Originating Year:	2025	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

The City purchased 922 E. California Avenue in FY 2023/24 for municipal purposes for the benefit to the city.

This project was created to make needed renovations and tenant improvements to the property. The property will be used to house city staff currently working out of trailers. The work on this property includes but is not limited to internet, utilities, landscaping, alarm, security, gates, cubicles, flooring and any general repairs or maintenance required to preserve the condition of the property including the yard area around it.

Project Evaluation and Analysis

This project is necessary to bring this property up to a working standards to become a space for city employees. The location of this project is near the city's Corporation Yard. The use of this property will eliminate the need to build a new building for city staff currently working out of trailers, thus resulting in significant saving for the city.

Fiscal Impact

This project will be reevaluated during the next CIP cycle in relationship to the Corporation Master Plan.

837430 - WPCP Card Key System

Originating Year:	2025	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2025/26	Category:	Infrastructure	Project Manager:	Sean Smith

Project Description/Scope/Purpose

This project was created to retrofit card reader systems at buildings at the Water Pollution Control Plant built under the earlier stages of the Water Pollution Control Plant Projects. The upgrade is needed to sync to the City's new velocity card reader system.

Project Evaluation and Analysis

Upgrading the card reader system at WPCP will integrate all buildings under one software program.

Fiscal Impact

The project will be fund by the Wastewater Management Fund.

837800 - Tasman Drive Multi-Use Path

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2037/38	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include environmental review, design and construction of the removal of one travel lane in each direction and the installation of Class I Multi-Use Path on both sides of Tasman Drive between Fair Oaks Avenue and Vienna Drive.

Project Evaluation and Analysis

The Tasman Drive Pedestrian-Bicycle Improvements Study was completed and presented to the Council on July 29, 2025 (RTC No. 25-0127). City Council selected Design Alternative 1 for Tasman Drive between Fair Oaks Avenue and Vienna Drive. The project will include removing one travel lane in each direction and installing Class I Multi-use path on both sides of project segment. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

The project is currently unfunded. The City anticipates mixed funding: Grants and General Fund.

837810 - Bike Lanes on Hollenbeck

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include design and construction of the removal of on-street parking on both sides of the street and installation of Class IIB buffered bike lanes along Hollenbeck Avenue from Danforth Drive to Alberta Avenue. In addition, the project will include the removal of the pork-chop islands at Hollenbeck Avenue and Fremont Avenue, which would require a signal modification at the intersection.

Project Evaluation and Analysis

The Hollenbeck Bike Lane Study was completed and presented to the City Council on December 2, 2025 (RTC No. 25-0707). City Council selected Alternative 1, which includes removal of on-street parking on both sides of the street to install Class IIB buffered bicycle lanes along Hollenbeck Avenue between Danforth Drive and Alberta Avenue. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

837820 - Caltrain Station Ped-Bicycle Access Study

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

The project includes planning, environmental review, design and construction of pedestrian and bicycle improvements on six corridors near the Sunnyvale Caltrain Station: (1) California Avenue, (2) W. Hendy Avenue and N. Frances Street, (3) S. Frances Street, (4) W. Evelyn Avenue, (5) N. Mathilda Avenue including City Parking Lot Underneath the Mathilda Avenue Overpass, and (6) Washington Avenue and S. Pastoria Avenue. The improvements include new shared-use paths, traffic circles, rectangular rapid flashing beacons, curb extensions, high visibility crosswalks, a pedestrian scramble, raised intersection, and parking studies. The improvements identified on California Avenue would require coordination with County of Santa Clara Roads and Airport Department. Coordination are also required with Caltrain where appropriate.

Project Evaluation and Analysis

The project was initiated as Study Issue DPW 20-02 Improve Bicycle and Pedestrian Access at Sunnyvale Caltrain Station. The study included an evaluation of existing access needs and extensive public outreach efforts to identify challenges and proposed concept recommendations for six corridors. The study was approved by City Council during its February 3, 2026 meeting (RTC No. 26-0095). Council directed staff to create an Unfunded Project and look for grant funds. These improvements will enhance mobility options for Sunnyvale residents and regional transit users commuting to and from Sunnyvale.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

The project is currently unfunded. The City anticipates mixed funding: Grants and General Fund.

837830 - Southbound Mathilda Avenue Bike Lane

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include environmental review, design and construction of the removal of one southbound travel lane and install Class IIB Buffered Bicycle Lane on southbound Mathilda Avenue between Ahwanee Avenue/Almanor Avenue and Maude Avenue.

Project Evaluation and Analysis

The Mathilda Bike Lane Study was completed and presented to the Council on October 21, 2025 (RTC No. 25-0452). City Council selected Design Alternative 1, which includes removing one southbound travel lane and install Class IIB Buffered Bicycle Lane on the west side of Mathilda Avenue (southbound) between Ahwanee Avenue/Almanor Avenue and Maude Avenue. This project will also include coordination with Caltrans for the design and construction of the segment between US 101 off-ramps and Ahwanee Avenue/Almanor Avenue. This improvement was identified in the 2020 Active Transportation Plan. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

This project is currently unfunded.

Plans and Goals

CC - Community Character - CC-1: Distinguished City Image

FY 2025/26 APPROVED PROJECTS

837640 - 2026 Fourth of July Celebration Event

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	210 - Library and Recreation Services
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Laura Jammal

Project Description/Scope/Purpose

The City of Sunnyvale is planning a Fourth of July Celebration Event for 2026 as in years past. In 2025, the City scaled back its Fourth of July event to a family focused celebration downtown during the day. This was more consistent with Fourth of July events held in previous years, although the annual event had been paused for at least a decade prior.

Council requested staff research the feasibility and analyze the cost to host a semiquincentennial Fourth of July celebration event for Sunnyvale residents in 2026. This event will again focus on a family style celebration throughout the downtown area.

Project Evaluation and Analysis

The celebration event will take place in the Sunnyvale downtown area as a free, family-friendly event designed to bring the community together to celebrate each other, the City of Sunnyvale, and our nation's independence. The event will run from the late morning to the late afternoon. The celebration will include:

- Carnival games and rides
- Crafts and activities for children
- Entertainment stage
- Bike parade

In addition to the cost of the entertainment, there will be internal service costs, specifically staff overtime and contract staff costs, for the following supporting departments: Library and Recreation Services Department, Department of Public Safety, and Department of Public Works (Streets and Parks), as well as rental equipment for stages, booths, etc.

The budgeted amount includes staffing, safety services, traffic control, marketing, carnival rides, games and activities, craft supplies, music and sound projection, and rentals for transporting supplies and equipment.

Fiscal Impact

This event is for calendar year 2026. No ongoing operating funding will be needed.

837650 - Cell Coverage Mapping

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	290 - Information Technology
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Wil Guitarte

Project Description/Scope/Purpose

The study issue (ITD 25-01) is focused on determining where the City has gaps in sufficient cell phone coverage since more services are provided online. This initiative will include an RFP to map signal strength throughout the City at different times of day, and to provide a report identifying which areas are most underserved. The report would list ideal sites for new cellular infrastructure or potential City Wi-Fi coverage to close the coverage gap. Additionally, the report will include examining disaster response planning regarding cellular coverage in the City. The study's scope includes:

1. Issuing an RFP and selecting a consultant to provide heat maps showing signal strength throughout the City, including varying times of day, and identify gaps or areas where there is minimal or no service available.
2. Providing a report that includes recommendations on where cell service or the installation of City provided Wi-Fi would reduce or eliminate gaps in service.
3. Providing a report with the specific disaster recovery plans and response times related to each carrier, to include the steps to bring services back online in the event of a disaster.
4. Providing recommendations on how to address any gaps in service and the associated costs related to the recommended options.

Project Evaluation and Analysis

The study should provide an analysis of where there is insufficient cell phone coverage throughout the City at various times of day. It will also include a report providing recommendations on how to remediate those gaps.

The initial step of issuing an RFP and selecting a consultant would be completed by City staff and require staff to work and coordinate with the consultant. The consultant would be tasked to conduct a study to provide the heat maps and identify service gaps. This includes creating a report with recommendations, detailing disaster recovery plans for each carrier, and providing recommendations to address service gaps and the associated costs.

Fiscal Impact

Unknown cost to implement study results. Study would include assessment of potential costs, including capital and operating, as well as revenue/savings.

837660 - SVCE Engagement Track Electrification Engagement

Originating Year:	2025	Project Type:	Governance and Community Engagement	Department:	270 - Environmental Services
Planned Completion Year:	2027	Category:	Special	Project Manager:	Madeline Khair

Project Description/Scope/Purpose

The Environmental Services and Library & Recreation Services Departments received a grant from Silicon Valley Clean Energy (SVCE) for engagement on electrification. The grant funding will support hiring an electrification liaison (casual staff) to work with commercial and multi-family properties on both building and transportation electrification. It will also support expanding the inventory of the Library of Things to include solar and battery-powered items. Also, it supports purchasing an electric generator to be used by the Recreation Division for community events, such as summer movie nights.

Project Evaluation and Analysis

This is a 2-year grant with a completion date of December 31, 2027. This work supports the City's Climate Action Playbook Moves, 2.D (electrification of existing buildings, 2.E (electrification of city facilities and equipment), 5.F (creating demonstration projects within city operations, and 3.N (electric vehicle infrastructure).

Fiscal Impact

This is a reimbursement-based grant. All activity will be charged against this project number and requests for reimbursement will be made of SVCE. There will be no ongoing operational costs.

837670 - Public Safety Headquarters Elevator Repair and Modernization

Originating Year:	2026	Project Type:	Administrative Facilities	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Capital	Project Manager:	Sean Smith

Project Description/Scope/Purpose

The passenger elevator at the Department of Public Safety Headquarters is approximately 41 years old and recently experienced a malfunction that affected its ability to operate. The elevator's hydraulic cylinder, which lifts and lowers the car, has failed and must be replaced. The elevator has reached the end of its useful life and needs a significant overhaul.

The elevator will be fully repaired and modernized. The work includes replacing the failed hydraulic cylinder that lifts and lowers the elevator, along with upgrading the power unit, controller, door equipment, car fixtures, and other key components. Once completed, the elevator will operate more safely and efficiently, meet current building codes, and provide dependable service for City employees.

Project Evaluation and Analysis

The elevator has reached the end of its useful life. The recent malfunction has rendered it in operable.

Fiscal Impact

The project is funded by the General Fund. Council transferred the funds from the General Fund Budget Stabilization Fund.

837680 - CASC Fiscal Services

Originating Year:	2026	Project Type:	Governance and Community Engagement	Department:	170 - Finance
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Dennis Jaw

Project Description/Scope/Purpose

Beginning in the 2025/26 fiscal year, the City of Sunnyvale entered into a two-year agreement with the Cities Association of Santa Clara County (CASC) to provide financial services. The amount of the agreement is \$10,000 for the first year. The City will maintain CASC accounting records and provide reporting services upon request, as well as engage with an independent accounting firm to provide an external audit.

Project Evaluation and Analysis

The costs that are incurred primarily include staff time and the costs to engage an external auditor for audit services.

Fiscal Impact

The City will be reimbursed \$10,000 for providing financial services.

Funding Sources

General Fund

837690 - Sunnyvale Avenue/California Avenue Traffic Signal Upgrade

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2026/27	Category:	Infrastructure	Project Manager:	Joe Nguyen

Project Description/Scope/Purpose

This project provides funding for the construction for replacement of traffic signal underground conduits and signal pole structures at the intersection of Sunnyvale Avenue and California Avenue, which is at the end of its estimated life span and is not economical to maintain. Underground cables and conduits have a life expectancy of approximately 35 years.

Project Evaluation and Analysis

This budget was created because available federal funding was awarded in the amount of \$836,000 for this project, additional funds requested is to fund the remaining amount needed to complete construction of the project.

Fiscal Impact

The total project cost is \$1,366,212. The project is funded by the Housing Incentive Pool (HIP) Program Grant Funds (\$836,000) and the Project 836340 -Transportation and General Fund Grant Matching (\$156,705), which is the City's 11.47% local match. The budget provided is sufficient for the construction of the traffic signal system at the intersection of Sunnyvale Ave and California Ave.

Funding Sources

Housing Incentive Pool (HIP) Program Grant Funds and Project 836340 -Transportation and General Fund Grant Matching.

Plans and Goals

837700 - Sunnyvale Citywide Microtransit Service

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2031/32	Category:	Special	Project Manager:	Erik Trujillo

Project Description/Scope/Purpose

The project will launch and operate a citywide, on-demand microtransit service to provide an efficient and flexible transportation solution to bridge the First-Mile Last-Mile gaps within the City. The service will use nine zero-emission vehicles operating Monday through Friday from 7am to 9pm, and on Saturday and Sunday from 9am to 5pm.

Project Evaluation and Analysis

In 2023, City Council proposed Study Issue DPW 23-06 to "Evaluate Range of Options for Shuttle Service and Alternative Transportation Options for Fremont and Homestead High School Students who live in North Sunnyvale". At its March 26, 2024 meeting, the City Council directed staff to pursue a microtransit grant opportunities with a maximum 50% local match. In 2024, staff applied for and secured funding through the Transit & Intercity Rail Capital Program (TIRCP). The City was awarded \$4,179,000, requiring a 50% local match, for a total project cost of \$8,358,000 to launch and operate a citywide on-demand shuttle service over a five-year period.

Fiscal Impact

The project budget was approved through Budget Modification No. 14 (RTC No. 26-0333). The Transit & Intercity Rail Capital Program (TIRCP) grant will fund 50% of the total project cost, and the rest will be funded by the General Fund. The first-year local match of \$917,000 is being transferred from CIP 836340 Transportation and General Fund Grant Matching. The remaining local match will be appropriated as part of the FY 2026/27 Budget Adoption process.

Funding Sources

837710 - Fair Oaks Avenue Signalizations at Three Locations

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2028/29	Category:	Capital	Project Manager:	Erik Trujillo

Project Description/Scope/Purpose

This study will evaluate the potential of implementing a full traffic signal, traffic circle or a High-Intensity Activated crossWalk (HAWK) beacons on Fair Oaks Avenue at the following three cross-streets:

- Balsam Avenue
- E. Taylor Avenue
- McKinley Avenue

Fair Oaks Park and Victory Village Park, as well as Ellis Elementary School, are located directly on Fair Oaks Avenue. There are multiple intersections without signals or crosswalks, including at the three Study Issue locations. There are multiple 500- to 800-foot-long stretches without signalized crossings, which potentially results in pedestrians crossing mid-block or at unsignalized intersections.

Fair Oaks Avenue is a north-south Class I Arterial between Fair Oaks Way and N. Wolfe Road, and a Class II Arterial between N. Wolfe Road and El Camino Real. The roadway becomes E. Java Drive north of Fair Oaks Way, and E. Remington Drive south of El Camino Real. The speed limit of Fair Oaks Avenue in the study area is 30 mph between Ahwanee Avenue and Old San Francisco Road. Fair Oaks Avenue is a key bus corridor and has many residential housing and commercial businesses along the corridor.

Project Evaluation and Analysis

This study will involve hiring a consultant to identify existing conditions at and near all three intersections, collect data, and conduct the warrant and traffic analyses to determine the feasibility for each potential improvement. The consultant would also provide cost estimates for the final design and construction, should they be warranted.

If the study determines that the location(s) warrant installation of traffic signals, traffic circle and/or HAWK beacons, a separate project would need to be created and funded in the Capital Improvement Program to complete the utility base mapping, right-of-way mapping, topographic survey sufficient for base maps, design bid documents, preparation of construction cost estimates for the selected signalization methods, and the full construction costs.

Fiscal Impact

The costs associated with this study will be for consultant services. There is no anticipated ongoing operating costs from the study. However, this study may identify potential areas of improvements that will require one-time capital and future maintenance costs.

837720 - Explore Establishing a Japanese American Incarceration Memorial

Originating Year:	2026	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Fernanda Perdomo Arciniegas

Project Description/Scope/Purpose

This project will explore establishing a Japanese American Incarceration Memorial in Sunnyvale to honor residents impacted during World War II. The study will include historical research, community engagement, memorial design concepts, and evaluation of potential locations and features.

Project Evaluation and Analysis

The project will evaluate feasibility based on historical significance, community input, and comparison to similar memorials. Analysis will include design options, site selection, and alignment with City priorities, as well as input from commissions and stakeholders.

Fiscal Impact

The estimated cost to conduct the study is \$60,000 from the General Fund, with moderate staff effort required. Implementation costs are unknown and will be determined through the study, including potential construction, maintenance, and funding opportunities.

837730 - Evaluate the Addition of Paramedic Services for Sunnyvale Residents and Businesses

Originating Year:	2026	Project Type:	Public Safety	Department:	230 - Public Safety
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Peter Hoang

Project Description/Scope/Purpose

The project evaluates the feasibility, costs, and service models for adding City-operated paramedic services in Sunnyvale to supplement existing County-provided advanced life support, including assessing operational needs, funding options, and community support to inform City Council decision-making.

Project Evaluation and Analysis

The study will assess the feasibility of adding City paramedic services by evaluating service delivery models, operational requirements, costs, funding options, and community support, and determining whether integration into the current public safety model is viable or requires changes.

Fiscal Impact

The study is estimated to cost \$100,000. There are no anticipated ongoing operating costs.

Funding Sources

General Fund

837740 - Explore the Benefits and Costs of Project Labor Agreements

Originating Year:	2026	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Tim Kirby

Project Description/Scope/Purpose

This project provides funding to study the potential use of Project Labor Agreements (PLAs) for City construction projects. The effort will include consultant support to assess other agency practices, legal and operational considerations, and applicability to Sunnyvale, including thresholds, requirements, and implementation approaches.

Project Evaluation and Analysis

Although PLAs first were utilized in the 1930's for federal government dam projects, they are not commonly used locally and are not currently utilized in the City of Sunnyvale for its construction projects. PLAs have been a recent topic of discussion, with the federal government's Department of Labor strongly encouraging the use of PLAs, stating that these pre-hire agreements can benefit both contractors and owners by stipulating terms and conditions of the construction work. This study will help determine if implementing PLAs would yield efficiencies for the City's construction projects.

Fiscal Impact

Estimated one-time cost of \$120,000, funded by a proposed General Fund budget supplement. Staff effort to conduct the study is moderate. Costs to implement the study's findings are unknown and will be evaluated through the study.

837750 - Implement Homestead Road Full-Time Bike Lanes

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Infrastructure	Project Manager:	Angela Wong

Project Description/Scope/Purpose

The project will include design and implementation of converting the part-time bike lanes to full-time bike lanes on Homestead Road between Bernardo Avenue and Swallow Drive. It will include striping changes, installation of poles and signs and outreach to the residents. The completed project will provide a continuous bicycle facility for local and regional bicyclists.

The project will cover Council Districts 1, 3, and 4.

Project Evaluation and Analysis

Currently, some portions of Homestead Road have part-time bike lanes that prohibit parking in the bike lanes on weekdays from 7 a.m. to 6 p.m. At all other times on weekdays and all day on weekends, vehicles are allowed to park on the shoulders. On August 8, 2023, City Council approved the Homestead Bike Lane Study, which recommended converting all part-time bike lanes into full-time bike lanes on Homestead Road between Bernardo Avenue and Swallow Drive and implementing a road diet and buffered bike lanes where feasible. The Bicycle and Pedestrian Advisory Commission proposed a Budget Proposal 2025-02 to implement the study recommendations.

Fiscal Impact

In June 2025, as part of the FY25/26 Budget Adoption process, the City Council approved Budget Supplement No. 3 in the amount of \$415,000 from General Fund to fund Budget Proposal 2025-02 to complete the conversion of all part-time bike lanes into full-time bike lanes on Homestead Road between Bernardo Avenue and Swallow Drive.

837760 - Safe Parking Program Community Capital Grant

Originating Year:	2026	Project Type:	Governance and Community Engagement	Department:	150 - Community Development
Planned Completion Year:	2026/27	Category:	Special	Project Manager:	Amanda Sztoltz

Project Description/Scope/Purpose

Safe parking capital grant pilot program for community based organizations; offers grants of \$5,000-\$50,000 for program related costs to implement a safe parking site on their private land. Program opened in September 2025 and can cover capital improvements to the site and other start-up costs. Pilot is intended to run for one year; staff will assess use and funding options at the end of year one and make a recommendation to continue based on these factors.

Project Evaluation and Analysis

Pilot program was developed through direction from Council through RTC 24-1131; Council approved the project budget with the FY 2025-26 Adopted Budget. Program was offered as an additional option for the City Council to consider through RTC 24-1131; Council approved the recommendation during the November 2024 meeting.

Fiscal Impact

This project will be run for one year. At this time there are no anticipated ongoing operating costs.

Funding Sources

General Fund

837770 - Electrification of the SMaRT Station Administration Building

Originating Year:	2025	Project Type:	Administrative Facilities	Department:	270 - Environmental Services
Planned Completion Year:	2026	Category:	Infrastructure	Project Manager:	Gerald Lee

Project Description/Scope/Purpose

The City-owned SMaRT Station and Materials Recovery Facility (MRF) is located at 301 Carl Rd. Sunnyvale CA, 94089. The 120,000 square foot facility processes approximately 136,000 tons of municipal solid waste and 41,000 tons of recyclables annually from Sunnyvale, and Mountain View. The 5,800 square foot administrative building is used daily by City staff, Bay County SMaRT (BCS) staff who operate the facility, members of the public entering through the Recycling Center, public tours, and all BCS employees who rely on the building's locker rooms and dining area. The project will replace aging, fossil-fuel-powered equipment that is past its useful life. Installing high-efficiency HP HVAC units and HPWHs will significantly reduce onsite greenhouse gas emissions, improve indoor air quality, and provide a healthier, more comfortable environment for staff, visitors, and facility users.

Project Evaluation and Analysis

This project advances the City's goals of reducing greenhouse emissions and the reliance on fossil-fuel infrastructure upon new construction or redevelopment of municipal buildings. The project aligns directly with the City's Climate Action Playbook (CAP) Move 2.E, demonstrating municipal facility electrification at a high-visibility public facility. The existing fossil-fuel HVAC systems at the SMaRT Station are at the end of their useful life, and the facility has sufficient electrical capacity to support full electrification of new appliances. These factors make this project an ideal site to transition to modern, efficient, and all-electric heating and cooling equipment. Installation of new heat pump HVAC (HP HVAC) units and heat pump water heaters (HPWH) that will fully electrify the SMaRT Station administrative office building. The project also includes consultant costs for required structural assessment.

Technology Included in This Project

- Installation of five rooftop heat pump HVAC (HPHVAC) units and supporting electrical equipment;
- Installation of two heat pump water heaters (HPWH);
- Refrigerant piping and condensate drains;
- Consultant services for structural assessment

Fiscal Impact

This project directly supports the City of Sunnyvale's greenhouse gas reduction and climate action goals by fully eliminating the use of natural gas for air heating and cooling and hot water at the SMaRT Station administrative office building. In 2024, the building consumed 838 therms of natural gas, resulting in approximately 4,441 kg of CO₂ emissions. Replacing the existing fossil-fuel equipment with high-efficiency HP HVAC systems and HPWHs will eliminate these quantified emissions and associated natural gas costs immediately upon installation. The SMaRT Station received a \$130,000 grant from Silicon Valley Celan Energy to support this project.

837780 - City Manager Contingency Fund

Originating Year:	2026	Project Type:	Governance and Community Engagement	Department:	130 - Office of City Manager
Planned Completion Year:	Ongoing	Category:	Special	Project Manager:	Tim Kirby

Project Description/Scope/Purpose

Establishes a contingency fund for operational, time-sensitive needs that arise during the fiscal year and fall within the City Manager's spending authority.

Project Evaluation and Analysis

The fund should be appropriated annually as part of the budget adoption process, with an initial amount of \$250,000, consistent with the City Manager's existing maximum reappropriation authority for large programs.

Fiscal Impact

Unused funds will not be carried forward into subsequent fiscal years. There is no additional ongoing operational impact.

837790 - Tree Trimming at Well Sites

Originating Year:	2026	Project Type:	Parks and Recreation	Department:	250 - Public Works
Planned Completion Year:	2027/28	Category:	Special	Project Manager:	Travis Rios

Project Description/Scope/Purpose

This project will prune and remove trees at the city's well water facility in Sunnyvale. The work provides proactive care such as structural pruning, hazard mitigation, and inspections to protect critical infrastructure, improve site safety, and preserve healthy trees. The goal is to shift from reactive response to planned maintenance, reducing risk and extending the life of both trees and City assets.

This project will commence in FY 2026/27 and be completed in FY 2027/28. Upon completion, funding will be added to the Urban Trees Program for routine maintenance.

Project Evaluation and Analysis

Trees at well sites have historically received limited maintenance, resulting in increased structural defects, safety concerns, and risk to infrastructure. Continuing the current reactive approach leads to higher emergency costs and potential damage to critical systems. A proactive maintenance program is the most cost-effective solution, as preventative pruning and targeted removals reduce failures, improve safety, and avoid expensive emergency work. This approach supports infrastructure protection, responsible fiscal management, and long-term urban forest sustainability.

Fiscal Impact

Once the project is completed, there will be Operating Impacts of \$75,000 annually in the Urban Trees Program. Those funds will be paid out of the General Fund.

Funding Sources

This project is funded by the Water Supply and Distribution Fund.

837800 - Tasman Drive Multi-Use Path

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2037/38	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include environmental review, design and construction of the removal of one travel lane in each direction and the installation of Class I Multi-Use Path on both sides of Tasman Drive between Fair Oaks Avenue and Vienna Drive.

Project Evaluation and Analysis

The Tasman Drive Pedestrian-Bicycle Improvements Study was completed and presented to the Council on July 29, 2025 (RTC No. 25-0127). City Council selected Design Alternative 1 for Tasman Drive between Fair Oaks Avenue and Vienna Drive. The project will include removing one travel lane in each direction and installing Class I Multi-use path on both sides of project segment. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

The project is currently unfunded. The City anticipates mixed funding: Grants and General Fund.

837810 - Bike Lanes on Hollenbeck

Originating Year:	2025	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	2035/36	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include design and construction of the removal of on-street parking on both sides of the street and installation of Class IIB buffered bike lanes along Hollenbeck Avenue from Danforth Drive to Alberta Avenue. In addition, the project will include the removal of the pork-chop islands at Hollenbeck Avenue and Fremont Avenue, which would require a signal modification at the intersection.

Project Evaluation and Analysis

The Hollenbeck Bike Lane Study was completed and presented to the City Council on December 2, 2025 (RTC No. 25-0707). City Council selected Alternative 1, which includes removal of on-street parking on both sides of the street to install Class IIB buffered bicycle lanes along Hollenbeck Avenue between Danforth Drive and Alberta Avenue. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

The project is currently unfunded. The City anticipates mixed funding: Grants and General Fund.

837820 - Caltrain Station Ped-Bicycle Access Study

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

The project includes planning, environmental review, design and construction of pedestrian and bicycle improvements on six corridors near the Sunnyvale Caltrain Station: (1) California Avenue, (2) W. Hendy Avenue and N. Frances Street, (3) S. Frances Street, (4) W. Evelyn Avenue, (5) N. Mathilda Avenue including City Parking Lot Underneath the Mathilda Avenue Overpass, and (6) Washington Avenue and S. Pastoria Avenue. The improvements include new shared-use paths, traffic circles, rectangular rapid flashing beacons, curb extensions, high visibility crosswalks, a pedestrian scramble, raised intersection, and parking studies. The improvements identified on California Avenue would require coordination with County of Santa Clara Roads and Airport Department. Coordination are also required with Caltrain where appropriate.

Project Evaluation and Analysis

The project was initiated as Study Issue DPW 20-02 Improve Bicycle and Pedestrian Access at Sunnyvale Caltrain Station. The study included an evaluation of existing access needs and extensive public outreach efforts to identify challenges and proposed concept recommendations for six corridors. The study was approved by City Council during its February 3, 2026 meeting (RTC No. 26-0095). Council directed staff to create an Unfunded Project and look for grant funds. These improvements will enhance mobility options for Sunnyvale residents and regional transit users commuting to and from Sunnyvale.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

The project is currently unfunded. The City anticipates mixed funding: Grants and General Fund.

837830 - Southbound Mathilda Avenue Bike Lane

Originating Year:	2026	Project Type:	Traffic and Transportation	Department:	250 - Public Works
Planned Completion Year:	Ongoing	Category:	Capital	Project Manager:	Nathan Scribner

Project Description/Scope/Purpose

This project will include environmental review, design and construction of the removal of one southbound travel lane and install Class IIB Buffered Bicycle Lane on southbound Mathilda Avenue between Ahwanee Avenue/Almanor Avenue and Maude Avenue.

Project Evaluation and Analysis

The Mathilda Bike Lane Study was completed and presented to the Council on October 21, 2025 (RTC No. 25-0452). City Council selected Design Alternative 1, which includes removing one southbound travel lane and install Class IIB Buffered Bicycle Lane on the west side of Mathilda Avenue (southbound) between Ahwanee Avenue/Almanor Avenue and Maude Avenue. This project will also include coordination with Caltrans for the design and construction of the segment between US 101 off-ramps and Ahwanee Avenue/Almanor Avenue. This improvement was identified in the 2020 Active Transportation Plan. Council directed staff to create as an Unfunded Project and look for grant funds.

Fiscal Impact

This project is currently unfunded. Staff will look for grant funding opportunities. As funding opportunities arise, staff will bring the project before the Council for consideration and budget appropriation.

Funding Sources

This project is currently unfunded.

Plans and Goals

CC - Community Character - CC-1: Distinguished City Image

LT - Land Use and Transportation - LT-3: An Effective Multimodal Transportation System
